PRESS RELEASE

Our Ref: NBS/C.30/4/65

Date: 10th November, 2015

PRODUCER PRICE INDICES (PPI) FOR August, 2015

Introduction

The National Bureau of Statistics hereby releases the Producer Price Index (PPI) for the July-September quarter of 2015. Producer Price Index measures the average change over time in the prices received by selected domestic producers for the production of their goods. A basket includes a list of selected commodities of goods that are being priced on quarterly basis. The producer prices are collected as at 15th February, 15th May, 15th August and 15th November as the mid-month of every Quarter of the year. These dates corresponds to the (January-March), (April-June), (July-September) and (October-December) quarters respectively.

Weights and a Reference Period

The index weights are based on gross output derived from the 2008 Annual Survey of Industrial Production. The PPI on this release reports the price indices with reference to March 2013, as the base period. It shows the producer price changes since March 2013 on three major sub-sectors of industry (Mining, Manufacturing, and Utilities).

Classification

As shown on the Table 1, Commodities Classification follows the International Standard Industrial Classification of All Economic Activities (ISIC) Rev.4.

Methodology

In the process of deriving the structure and weights, a top-down approach was adopted, the basket was selected and 2008-based weights calculated. A top-down approach was adopted for the calculation of the weights in order to maximize the indirect representation of industries and items. A sample of establishments for inclusion in the price survey was then selected using cut-off sampling procedures.

The price relatives of the selected commodities on each four digit level of ISIC was computed. The first level of aggregation is the class 4-digit ISIC; these indices are the un-weighted Elementary Aggregate (EA) and are being compiled using the Jevons geometric mean aggregation formula which refers to Geometric Mean of the price relatives. The Elementary Aggregates indices are then being progressively combined to higher levels within the index structure (i.e. group 3-digit, 2-digit division and 1-digit Section levels of the ISIC, and then the all groups level) using the standard base-weighted Laspeyres formula .

As shown in Table 1, all industry (overall index) recorded an increase from 103.6 points to 111.6 points of the third Quarter (July-September 2015). The main drivers of the increase in price of the Third Quarter of the year 2015 as shown in Table 2, were Mining of metal ores (40.3%), Utilities (30.6%), Manufacture of fabricated metal products, except machinery and equipment (15.3%) and Manufacture of rubber and plastics products(4.4%). On the other hand other mining and quarrying recorded the decreases of (-2.2 %) while Manufacture of beverages decreases by (-1.4%) and Manufacture of food products recorded a decrease of (-1.3%) when compared with the second quarter of the year 2015.
