Availability of TB Services by Facility Type

Among all facilities (N=1,188), percent that offer TB services

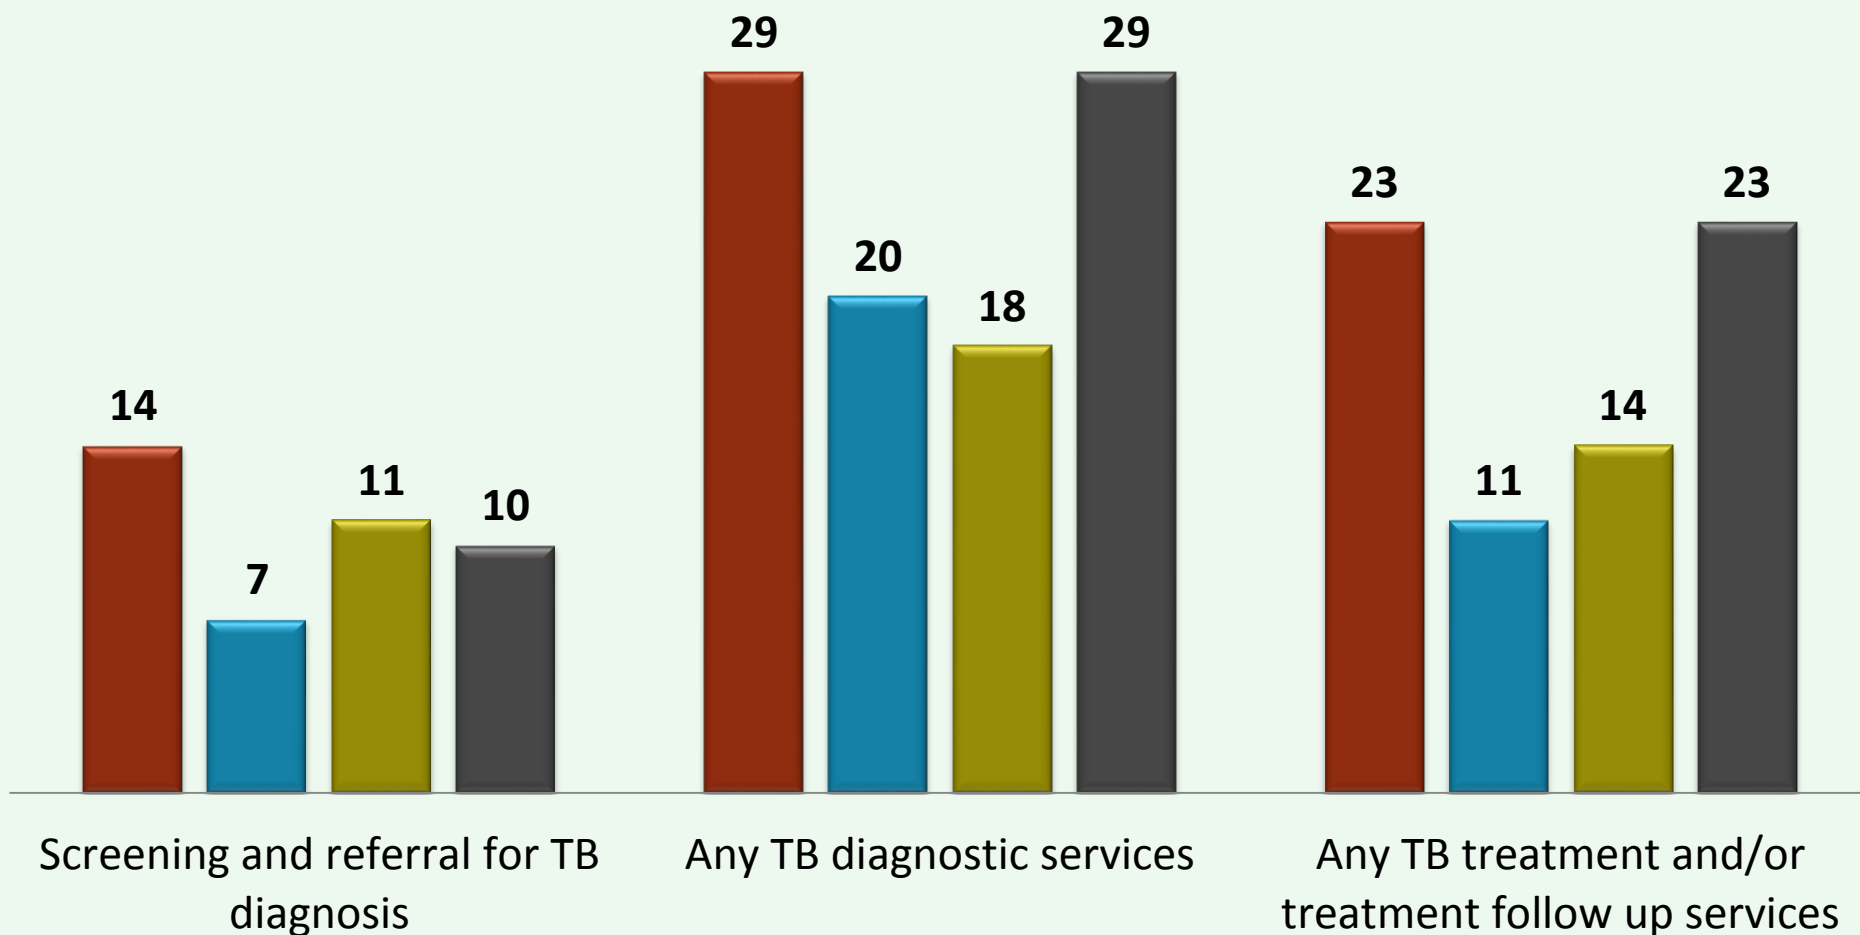

■ Hospital ■ Health centre ■ Dispensary ■ Clinic ■ Total

Availability of TB Services by Managing Authority

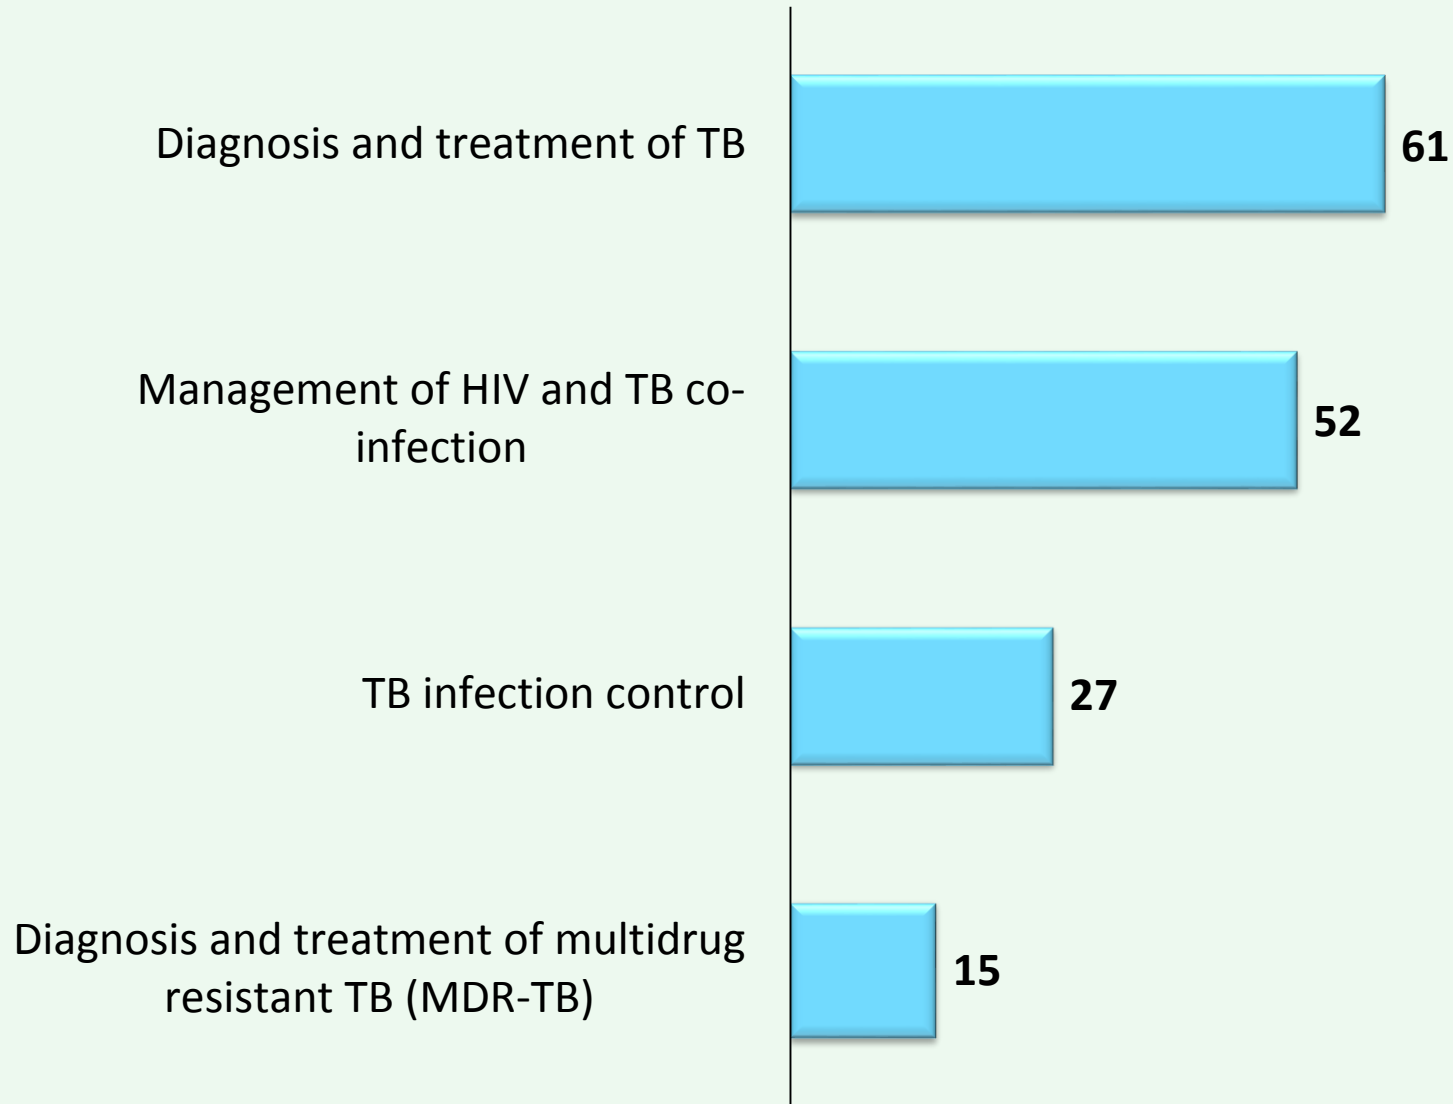

Among all facilities (N=1,188), percent that offer TB services

■ Government ■ Private-for-profit ■ Parastatal ■ Faith-based

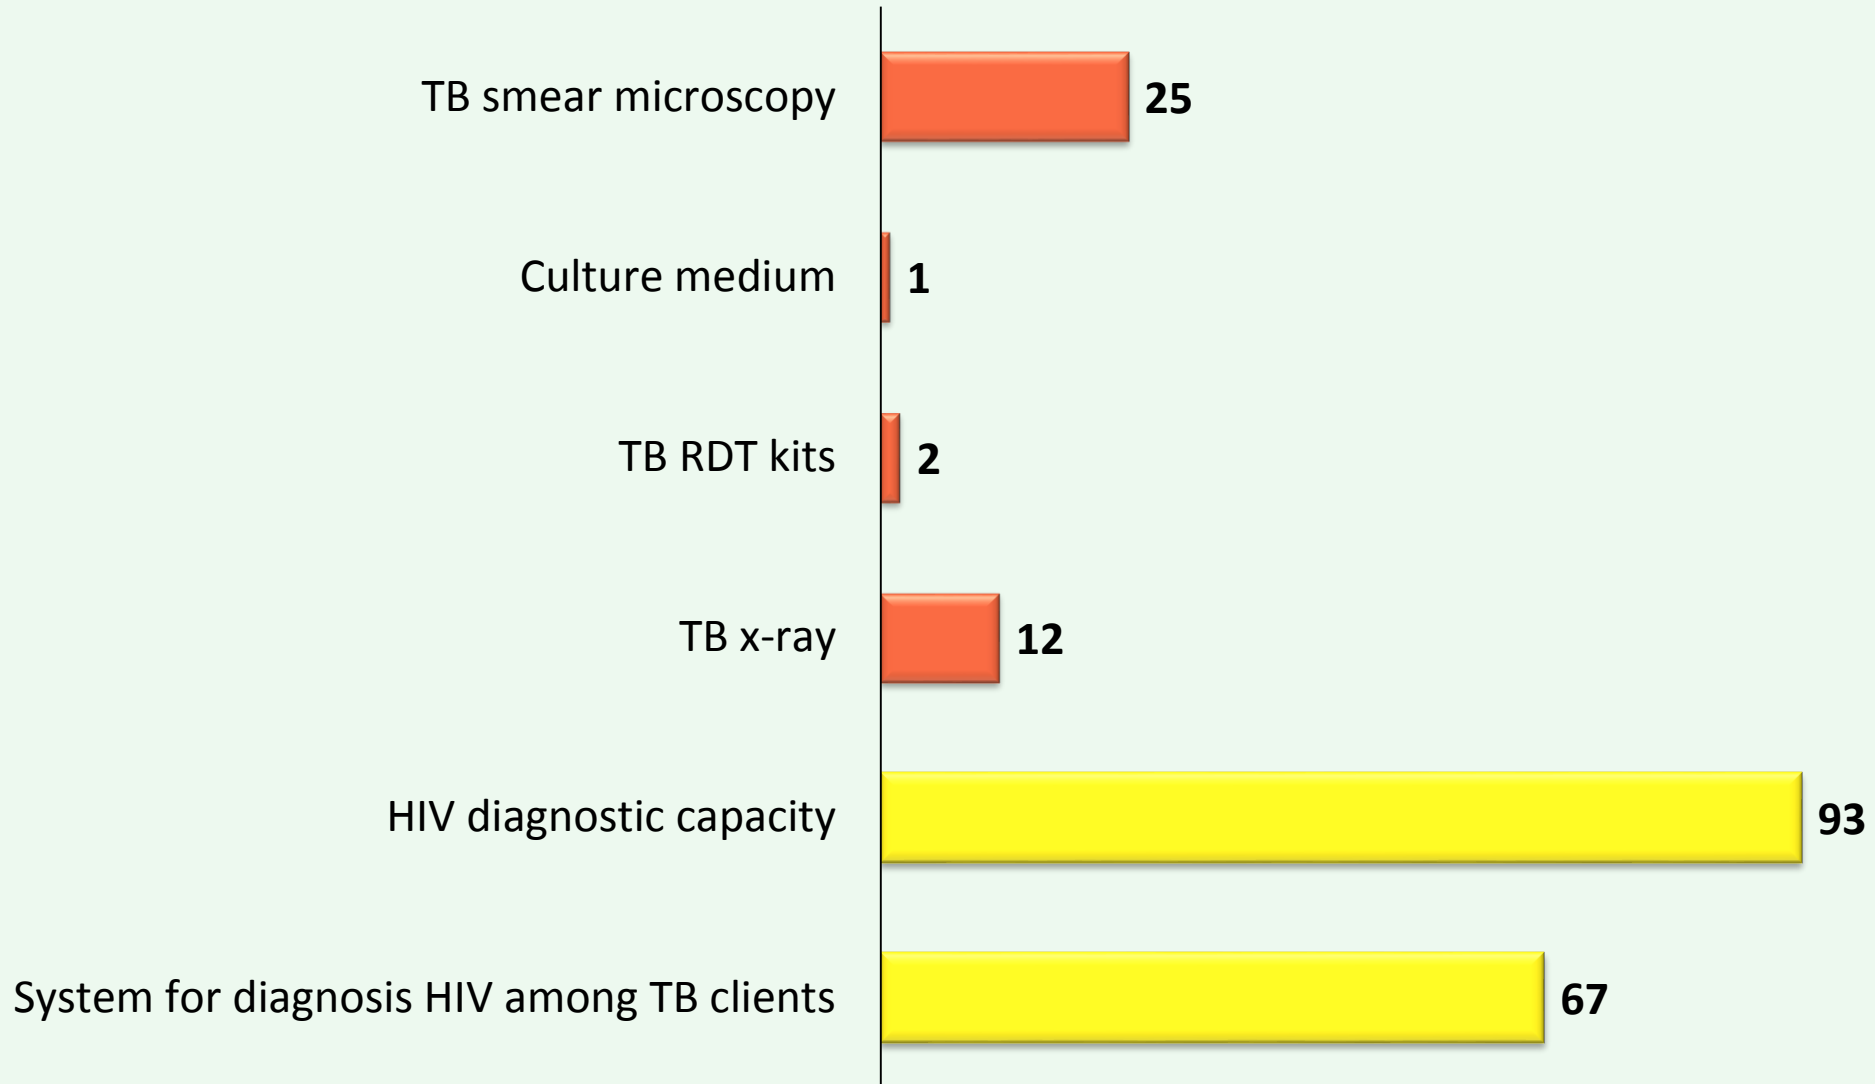

Guidelines for Tuberculosis

Percent of facilities offering TB services (N=341) with guidelines for:

Diagnostic Capacity for TB

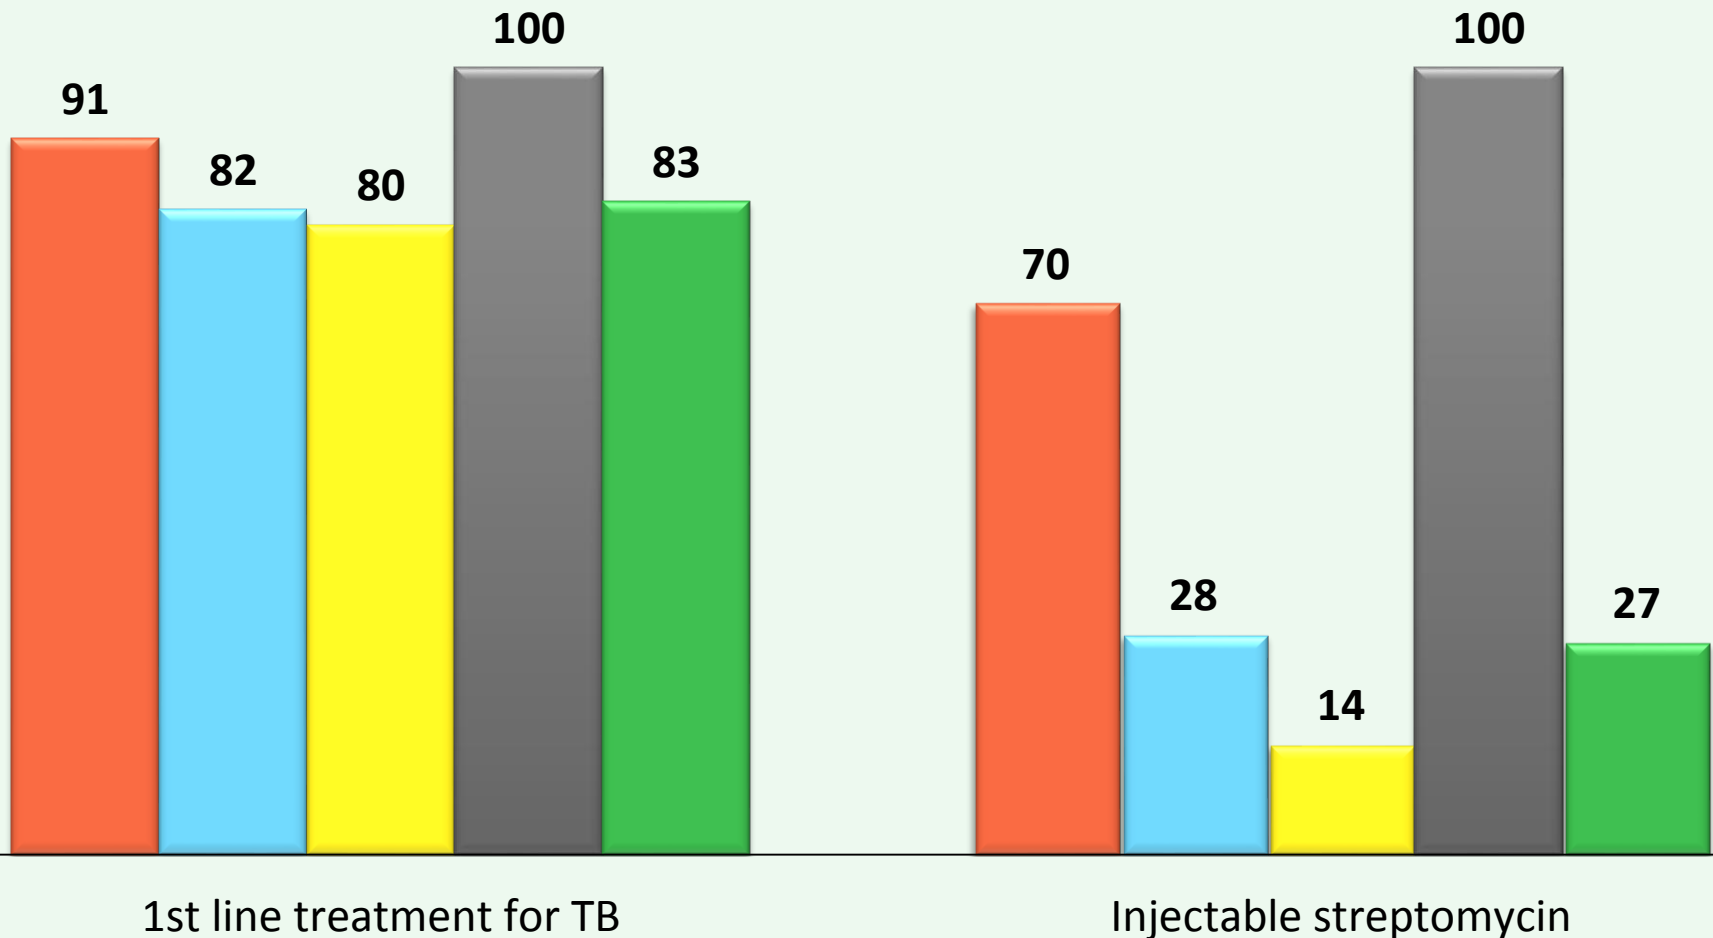

Percent of facilities offering TB diagnostic services (N=324) that have the capacity to conduct the indicated tests in the facility

Availability of Medicines for TB Treatment

Percent of facilities offering TB treatment and/or treatment follow-up services (N=250) that have the following medicines for treating TB

■ Hospital ■ Health centre ■ Dispensary ■ Clinic ■ Total

Key Findings

- **52%** of facilities offer services for **diabetes**
- Among facilities offering services for diabetes, **diagnostic capacity** and **availability of medicines** are generally low
- **65%** of facilities offer **cardiovascular disease** services
- **Aspirin** is the only drug that the majority of facilities offering cardiovascular disease services have in stock.
- **61%** of facilities offer **chronic respiratory disease** services
- **19%** of facilities offering services for chronic respiratory diseases have **Salbutamol inhaler or tablets**
- **23%** of the Government facilities offer **any TB treatment and/or treatment follow-up services**
- **Only 25%** of facilities offering any TB services have **TB smear microscopy**. Almost all have a system for **diagnosing HIV**.
