

The United Republic of Tanzania

2016/17 ANNUAL AGRICULTURE SAMPLE SURVEY CROP AND LIVESTOCK REPORT

Ministry of Agriculture; Ministry of Livestock and Fisheries; Ministry of Industry, Trade and Investment; President's Office, Regional Administration and Local Governments; Ministry of Agriculture, Natural Resources, Livestock and Fisheries, Zanzibar; National Bureau of Statistics; and the Office of the Chief Government Statistician, Zanzibar.

FOREWORD

At the end of the 2016/17 Agricultural year, the National Bureau of Statistics (NBS) in collaboration with the Ministry of Agriculture, Ministry of Livestock and Fisheries, Ministry Industry, Trade and Investment; the President's Office, Regional Administration and Local Government (PO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministry of Agriculture and Natural Resources Zanzibar; Ministry of Livestock and Fisheries Zanzibar; conducted the Annual Agricultural Sample Survey (AASS) .

The survey collected detailed information on area and production for major crops and potentially livestock. This is the second survey of its kind conducted in Tanzania using Point Sample Area Frame Methodology its was preceding with the first one conducted in 2014/15 Agricultural year.

The extensive nature of the survey in relation to its scope and coverage is a result of the increasing demand for more timely, accurate estimates of area and production for major crops and livestock.

It is expected that, the survey report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural operators in the country.

On behalf of the Government of Tanzania, we wish to express our sincere appreciation for both financial and technical support provided by the United States Agency for International Development (USAID) and United States Department of Agriculture (USDA).

My appreciation also goes to all those who in one-way or the other have contributed to the success of the survey. In particular, we would also like to mention the enormous effort made by the Planning Group composed of professionals from the Department of Agriculture Statistics of the National Bureau of Statistics, Ministry of Agriculture; Ministry Livestock and Fisheries; Ministry of Industries, Trade and Investment; the President's Office, Regional Administration and Local Government; Eastern Africa Statistical Training Centre; the Office of the Chief Government Statistician, Zanzibar, Ministry of Agriculture and Natural Resources Zanzibar; and Ministry of Livestock and Fisheries; Zanzibar.

I would like also to extend my sincere gratitude to all regional and district officials who worked tirelessly with the National Bureau of Statistics for their support of ensuring smooth data collection in their respective regions and district.

Finally, I would like to extend our sincere gratitude to all supervisors, interviewers and respondents for their commendable work, to ensure that the data collected was of good quality.

Dr. Albina Chuwa

Director General

National Bureau of Statistics

Chapter One

Background

1.0 Introduction

Agriculture is an important economic sector of the Tanzanian Economy and contribute about 29.1 percent of Gross Domestic Product (GDP) (The Economic Survey 2016). It is the main source of food, employment, raw materials for industries and foreign exchange earnings. Since Tanzania has different climatic and geographical zones, farmers grow a variety of annual and permanent crops. Crops grown includes cereals; pilses; root and tubers; fruits and vegetables; and spices. Moreover, farmers practice livestock farming by keeping animals like cattle, goats, sheep, pigs and chicken. They also keep a few numbers of turkeys, ducks, rabbits, donkeys and horses.

The importance of accurate and reliable agricultural statistics for planning and evidence-based decision making cannot be overemphasized. In addition, agricultural statistics are required to determine the growth of the sector, measure employment and reduction of poverty of the population in the rural areas, as well as to stimulate the investment in the agro based industry to support the establishment of of Industrialized economy.

In response to many challenges of meeting user needs for agricultural statistics in developing countries, a Global Strategy for Improving Agricultural and Rural Statistics was introduced and endorsed in February 2010 by the United Nations Statistical Commission (UNSC).

The purpose of the Global Strategy is to provide a framework and methodology that will help to improve the availability and quality of national and international food and agricultural statistics, to guide policy analysis and decision making in the 21st century. The Global Strategy is based on the following three pillars;

- i. The establishment of a minimum set of core data that countries will provide to meet their current and emerging demands;
- ii. The integration of agriculture into their national statistical systems (NSSs) to ensure that the data is comparable across countries and over time; and

- iii. Ensuring the sustainability of the National Agricultural Statistical System (NASS) through governance and statistical capacity building.

In the framework of implementing the Global Strategy to Improve Agricultural and Rural Statistics, the Government of Tanzania in collaboration with the Food and Agriculture Organization of the United Nations (FAO), United States Agency for International Development (USAID), United States Department of Agriculture (USDA) and African Development Bank (AfDB) initiated the process of improving the agricultural statistics system of the country through Strengthening Agricultural Statistics Program. The main aim of the program is to:

- i. Develop sampling frames and sample designs appropriate for generating agricultural statistics;
- ii. Design and implement an Annual Agricultural Survey; and
- iii. Develop Capacity through upgrading skills on national staffs.

The National Bureau of Statistics (NBS) and Office of Chief Government Statistician Zanzibar (OCGS) in collaboration with Agricultural Sector Lead Ministries (ASLMs) conducted the Annual Agriculture Sample Survey (AASS) for the Agricultural year 2016/17. This is the second AASS to be conducted under this initiative, the first one was conducted during the agricultural year 2014/2015. This report covers the objective and coverage of the survey, methodology, results and recommendations.

1.1 Survey Objectives

The general objective of the Annual Agriculture Sample Survey is to provide more timely and accurate estimates of area and production for major crops, livestock number and products and fish farming. The size of the crops production is crucial information needed by many people involved in agriculture. Estimates derived from this survey will supply basic information needed by farmers, agribusinesses, government policy makers and other stakeholders to make decisions for both short and long-term planning.

The specific objectives of AASS are to obtain

- i. Basic data to be utilized in the formulation and review of policies and implementation of agricultural plans at national and regional levels in between the agricultural census years;

- ii. Time series data on agricultural production and productivity at national and regional levels; and
- iii. Basic statistics for comparison on the development of the agriculture sector in the country.

1.2 Survey Scope and Coverage

The 2016/17 AASS was conducted from October to November, 2017 but the information collected was for the agricultural year 2016/ 17 covered farming operation in all regions of Tanzania. The interviews were conducted in detail using a well-structured questionnaire. The main topics covered were

- i. Land Ownership;
- ii. Farm Characteristics;
- iii. Crop Production;
- iv. Crop Prices;
- v. Livestock population and production; and
- vi. Fish Farming.

1.3 Survey Methodology

The main focus at all stages of the survey execution was on data quality. The main activities undertaken include

- i. Survey Organization;
- ii. Sampling;
- iii. Tabulation Plan Preparation;
- iv. Design of Survey Questionnaire and Other Instruments;
- v. Training of Trainers, Supervisors, and Enumerators;
- vi. Data Collection;
- vii. Field Supervision and Consistency Checks;
- viii. Data Processing; and
- ix. Manual Data Entry Application.

1.3.1 Survey Organization

The survey was carried out by NBS and OCGS in collaboration with ASLMs under technical support from USDA-NASS. Implementation of the survey at the national level was headed by NBS. The National Team had the responsibility of overseeing the operational aspects of the survey and the team comprised of staff from the Department of Agricultural Statistics of NBS and OCGS; ministries responsible for agriculture, livestock and fisheries from Tanzania Mainland and Zanzibar. Furthermore, the regional statistical officers from NBS and OCGS, in collaboration with staff responsible for agricultural statistics from the regional secretariats supervised the implementation of the survey activities at regional level.

1.3.2 Tabulation Plan Preparation

The tabulation plan was developed following a National Team's meeting which discussed the information and data needs of the end users. The meeting also considered the tabulations from other agricultural surveys to provide for trend analysis and comparisons as well as the needs of end users.

1.3.3 Questionnaire Design and Other instruments

A structured questionnaire was developed to focus on inventory, production and productivity of crop, livestock and fisheries. Several features were included into the design of the questionnaire to improve the quality of data collection during field work data collection. Among others, the following were some of features included:

- i. Where feasible, all variables were extensively coded to reduce post enumeration coding errors;
- ii. Skip patterns were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent; and
- iii. Each section was clearly numbered to facilitate the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS.

1.3.4 Training of Trainers, Supervisors and Enumerators

The training on survey methodology, concepts and definitions was organized for field work supervisors and enumerators. Training of Trainers and Enumerators were conducted prior to

enumeration process for Mainland and Zanzibar. During the training of enumerators, the issue of consistency checks in order to enhance the quality of the data was also emphasized. The trainers were members of the National Team in collaboration with the Regional Statistical Managers.

1.3.5 Data Collection

The actual data collection activity for the survey took one month from October to November 2017. The only method used for data collection was face to face interview by using the structured questionnaire. Field work was monitored through a hierarchical system of supervisors that began with the National Team, followed by the regional supervisors and enumeration team supervisors. The National Team included two senior supervisors who were responsible for overall guidance of field operations and responding towards queries raised outside the scope of subordinates.

1.3.6 Field Supervision and Consistency Checks

The enumerators were taught on techniques for probing respondents, so as to get reliable responses and finally record them correctly in the questionnaire. After completion of the interview enumerators made the first check of the questionnaire, followed by team supervisors, regional, and national supervisors. Supervisory visits at all levels of supervision, focused on consistency checks of the questionnaires. Inconsistencies encountered were corrected, and where necessary, a return visit to the respondent was made by the enumerator to correct the information. Further quality control checks were made through a major post enumeration checking exercise whereby, all questionnaires were checked for consistencies by editing staff in the national office.

1.3.7 Data Processing

Data processing consisted of the following activities:

- i. Data entry;
- ii. Data structure formatting;
- iii. Batch validation; and
- iv. Tabulation.

Prior to data entry, all questionnaires were cleaned manually to maintain the quality of the data. The process involved checking the completeness of questionnaire, correctness of identification details and other information, thereafter data were entered manually using CSPro. Subsequent to data entry, tables were prepared based on a predesigned tabulation plan. The plan focused on the objective of the survey in relation to the data needs of the stakeholders.

1.3.8 Analysis and Report Preparation

The analysis in this report focuses on regional comparisons and national production estimates. Statistical Package for Social Sciences (SPSS) was used to produce survey tables. CSPro was used for data entry and Microsoft excel was used to produce tables; whereas Microsoft word was used to compile the report in general.

1.3.9 Data Quality

The data quality was kept in mind throughout the entire exercise, from survey planning, questionnaire design, training, supervision, data entry, validation and data cleaning/editing. As a result of this process, it is believed that the survey data presented in this report are sufficiently accurate and representative of what was collected from the field.

1.4 Survey Limitation

1.4.1 Coverage

The Survey covered 30 regions of Tanzania out of which, 25 regions are from Tanzania Mainland and 5 regions are from Zanzibar. The 2010 area frame was used for sampling of which Songwe Region was part of Mbeya Region. Therefore, data for Songwe Region are included in Mbeya

Region. This survey can only produce statistically acceptable estimates at national and regional levels. The sampling design is not meant for district level estimates.

1.4.2 Data Collection

Crop Production Data

This survey collected information on more than 150 types of perennial and non-perennial crops. Due to the objective of this survey, analysis concentrated on limited number of main crops grown in Tanzania so as to get minimum core data in responding to the global strategy to improve agriculture and rural statistics for comparison purposes.

Livestock and Fisheries Production Data

The Sampling design for this survey was based on area frame. Due to nature of pastoralist communities in the country, suitability of this sampling design favors crops rather than livestock and fisheries related data.

Chapter Two

Operators and Farm Characteristics

2.0 Introduction

Characteristics of farms and operators provide important information for evaluating performance of the sector. Therefore, this chapter discusses in detail the findings of the survey on land ownership, number of operators in crop production in relation to rainy seasons and irrigation practices.

2.1 Land Ownership, Planted and Harvested Area

Land Ownership refers to the arrangements or rights under which the holder holds or uses the land. This section discusses how much land was available for farming activities and was used in crop production therefore planted and harvested during 2016/17 Agricultural year.

2.1.1 Area of land in farms

During the 2016/17 Agricultural year, the total area of land on farms used in crop production was 17,120,571 ha of which 16,977,740 ha (99.2 percent) were in Tanzania Mainland and 142,831 ha (0.8 percent) in Zanzibar.

In Tanzania Mainland, Tabora Region had the largest land area in farms (1,926,174 ha;11.3 percent), followed by Dodoma (1,487,065 ha;8.8 percent) (Figure2.1). Dar es Salaam (31,761ha;0.19 percent) had the smallest land are in farms. On the other hand, the region with largest land area in farms in Zanzibar was Kaskazini Pemba with 37,710 ha (26.4 percent), while Mjini Magharibi (9,913ha ;6.9 percent) had the smallest land area in farms with (.

Figure 2.1: Area of Land in Farms by Region, Tanzania Mainland, 2016/17 AASS

2.1.2 Planted Area for Annual Crops During Long and Short Rains and for Permanent Crops

In Tanzania there are two rainy seasons namely short rainy season and long rainy season. The former is from October to January of the following year while the latter is from March to May of the same year. Moreover, planted area refers to the total area in hectares that the operator was able to plant and permanent crops are crops which are produced from plants that last for many seasons, rather than being replanted after each harvest. The total planted area during the 2016/17 Agricultural year was 15,028,841 ha whereby 8,088,843 ha (53.8 percent) were planted in the long rainy season; 4,246,219 ha (28.3 percent) in the short rainy season and only 2,693,778 ha (17.9 percent) was planted with permanent crops.

For Mainland, the total planted area was 14,888,738 ha which is equivalent to 99.1 percent of the total planted area while Zanzibar had 140,103 ha (0.9 percent). Tabora region had the largest planted area of about 1,520,658 ha (10.2 percent) of planted area for Tanzania Mainland followed by Dodoma (1,178,262 ha; 7.9 percent) and Mwanza (794,252 ha; 5.3 percent). Dar es Salaam Region had the smallest planted area of 30,761 ha (0.2 percent).

In Zanzibar, Kaskazini Pemba had the largest planted area of 36,441 ha (26.0 percent) of the total planted area, followed by Kusini Pemba (35,935 ha; 25.6 percent) and Kaskazini Unguja (35,549 ha; 25.4 percent). The smallest planted area was in Mjini Magharibi with 10,615ha (7.6 percent).

Figure 2.2: Percentage Share of Planted Area (ha) by Type of Crop in Tanzania, 2016/17, AASS

2.1.3 Harvested Area for Annual Crops During Long and Short Rainy Seasons and for Permanent Crops

Harvested area refers to the total area in hectares from which the operator obtained crops from. It is equal to the area planted less the area that was not harvested due to pests and diseases, wild animals, drought; or maturity and the like. During 2016/17 Agriculture Year, the total harvested area was 11,599,014 ha (77.2 percent of the total planted area during the year). Out of the harvested area; 6,978,510ha (60.2 percent) were harvested in the long rainy season; 2,944,289ha (25.3 percent) in short rainy season; and only 1,676,215ha (14.5 percent) were harvested from area with permanent crops (Figure 2.3).

Figure 2.3: Percentage Share of Harvested Area (ha) by Type of Crops in Tanzania, 2016/17 AASS

2.2 Farm Operators

An operator refers to an individual or organization that exercises management control over the agricultural operation and who makes major decisions regarding resources utilization (i.e. funding/disbursements).

2.2.1 Operators and Types of Farming

A total of 8,763,267 operators were engaged in agricultural production activities of which 8,574,452 (97.8 percent) were in Tanzania Mainland and 188,814 (2.2 percent) in Zanzibar. The results disclose that, 4,886,825 operators (55.9 percent) were engaged in growing crops only, 213,600 (2.4 percent) kept livestock only and 3,662,842 (41.8 percent) engaged in both crop and livestock farming (Figure 2.4).

Figure 2.4: Percentage Share of Number of Operators by Type of Farms in Tanzania, 2016/17 AASS

2.2.1.1 Operators Engaged in Crop Farming

In Tanzania 4,886,825 operators were engaged in crop farming only of which 4,777,530 (97.8 percent) were in Tanzania Mainland and 109,295 (2.2 percent) in Zanzibar. In Mainland, Kigoma Region (86.8 percent) the largest percentage of operators practicing crop farming only followed by Mtwara Region with (86.3 percent) and Lindi Region with (80.9 percent). In Zanzibar, the largest percentage of operators in crop farming only) was observed in Kaskazini Unguja with (73.3 percent) and the smallest was in Mjini Magharibi (39.8 percent) (Table 2.1).

2.2.1.2 Operators Engaged in Livestock Farming

A total of 213,600 operators were engaged in livestock farming only of which 202,053 (94.6 percent) were in Tanzania Mainland and 11,547 (5.4 percent) in Zanzibar. Arusha Region (45.2 percent) had the largest percentage of livestock farming only operators in Tanzania Mainland. Four regions of Dodoma, Katavi, Ruvuma and Njombe had no livestock only operator. In the case of Zanzibar, Kusini Pemba (20.1 percent) had the Largest percentage of livestock only operators (Table 2.1).

2.2.1.3 Operators Engaged in Crops and Livestock Farming

Survey findings revealed that, 3,662,842 operators were engaged in both crop and livestock farming in Tanzania. Out of those 3,594,870 (98.1 percent) were in Tanzania Mainland and 67,972 (1.9 percent) in Zanzibar. Moreover, Manyara region (77.6 percent) had the largest percentage of Crops and Livestock operators, followed by Kilimanjaro (71.1 percent) and (64.8 percent). In Zanzibar, the leading region was Mjini Magharibi (59.4 percent) and the last region was Kaskazini Unguja (26.7 percent) (Table 2.1).

Table 2.1: Number of Operators engaged in Crop Farming, livestock keeping, Both Livestock Keeping and Crop Farming by Region in Tanzania, 2016/17 AASS

Region	Number			Percent		
	Crop Only Farms	Livestock Only Farms	Crop & Livestock Farms	Crop Only Farms	Livestock Only Farms	Crop & Livestock Farms
Dodoma	286,123	0	182,329	61.1	0.0	38.9

2.2.2 Operators with Registered Farms

During data collection a respondent was asked about registration of the farm where the point had fallen. “Registered” means that the owner of the farm has an official certificate of ownership of the farm land area.

The total number of farms that were reported during the survey was 8,763,267, of which, 1,576,235 (18.0 percent) were registered. Out of the total registered farms, 1,529,984 (97.1 percent) were in Tanzania Mainland and 46,251 (2.9 percent) in Zanzibar. In Tanzania Mainland, Kigoma Region had the highest number of registered farms (246,892;16.1 percent), followed by Tabora (146,911; 9.6 percent) and Pwani (141,485; 9.2 percent). The region with the smallest number registered farms was Rukwa (5,331 ;0.3 percent) (Figure 2.5(a)).

Figure 2.5(a): Percentage Distribution of Registered Farms by Region, Tanzania Mainland, 2016/17AASS

In Zanzibar, Kusini Pemba Region (12,299; 26.6 percent) had the largest number of registered farms, followed by Kusini Unguja (10,718; 23.2 percent) and the region with the smallest number was Kaskazini Unguja with 4,430(9.6 percent) registered farms (Figure 2.5(b)).

Figure 2.5 (b): Percentage Distribution of Registered Farms by Region, Zanzibar, 2016/17 AASS

2.3 Irrigation

Irrigation is an important alternative to rainfall in crop production. This practice ensures crop growth in the absence of rainfall. This section presents information on area under irrigation, source of water and methods used for irrigation.

2.3.1 Area Under Irrigation

Total number of operators using irrigation during the 2016/17 agricultural year was 437,112 of which 407,190 (93.2 percent) were in Tanzania Mainland and 29,922 (6.8 percent) were in Zanzibar. The total planted area under irrigation in Tanzania was 351,831 ha (2.5 percent) out of which 342,199 ha (97.3 percent) were in Tanzania Mainland and 9,632 ha (2.7 percent) were in Zanzibar. In Tanzania Mainland, Kilimanjaro Region (44,483 ha; 22.6 percent) led in planted area under irrigation, it was followed by Dar es Salaam (5,590 ha; 18.2 percent) and Mbeya (86,040 ha; 10.2 percent). The region with the least irrigated areas was Singida (824 ha; 0.1), followed by Simiyu (956 ha; 0.1 percent) e (Figure 2.6(a)).

Figure 2.6(a): Percentage of Area Irrigated (ha) by Region, Tanzania Mainland, 2016/17AASS

For Zanzibar, Mjini Magharibi (21.2 percent) and had the largest planted area under irrigation followed by Kusini unguja (20.5 percent) (Figure 2.6(b)).

Figure 2.6(b): Percentage of Planted Area (ha) Irrigated by Region Zanzibar, 2016/17 AASS

2.3.2 Sources of Water for Irrigation

The main sources of water for irrigation in Tanzania was river which was used by 157,645 operators, (18.0 percent of operators applying irrigation), followed by tap water (123,064;14.0percent) operators and wells (112,550; 12.8percent). The main source of water for irrigation in Tanzania Mainland was also river which was used by 151,788 operators (18.6 percent), followed by tap water (117,043 operators ;14.3 percent) and well (94,739; 11.6 percent). In Zanzibar, the main source of water for irrigation was wells which was reported by 17,812 operators (58.7 percent), followed by tap water (6,022; 19.8 percent) and rivers (5,857; 19.3 percent) (Figure 2.7).

Figure 2.7: Percentage of Operators by different Sources of Irrigation in Tanzania Mainland and Zanzibar, 2016/17, AASS

2.4.3 Methods of Irrigation

The main methods used by farm operators to obtain water for irrigation in Tanzania by farm operators include gravity, bucket, hand pump and water pump. Survey findings show that, in Tanzania, bucket was the main method of obtaining water for irrigation. It was used by 194,230 operators (44.2 percent of all operators) followed by gravity (152,475; 34.7 percent) and water pump (74,353; 16.9 percent). In Tanzania Mainland, the bucket was the main method of obtaining

water for irrigation (183,705 ;44.9 percent), followed by gravity (148,833; 36.4 percent) and water pump (65,796; 16.1 percent). In Zanzibar, the bucket was the main method of obtaining water for irrigation 10,525 ;34.4 percent), followed by water pumps (8,557; 28.0 percent) and hand pumps (7,877; 25.7 percent) (Figure 2.8).

Figure 2.8 Percentage of Operators by Main Methods of Obtaining Water for Irrigation in Tanzania Mainland, and Zanzibar, 2016/17 AASS

Chapter Three

Crop Production

3.0 Introduction

This chapter discusses in detail the findings of the survey on different crop types, number of operators, planted and harvested areas, crop production groups and yield. Findings on crop production are presented by considering different crops namely, cereals, roots and tuber, pulses, oil seeds and nuts, fruits and vegetables, fiber crops and permanent crops.

3.1 Cereal Crops Production

Cereal Crops are annual plants grown to produce grains which are mainly used as food and animal feed. The important cereal crops produced in Tanzania are maize, paddy, sorghum, finger millet, bulrush millet and wheat. The total area planted with cereals was 8,638,771 ha of which 8,608,727 ha (99.7 percent) were in Tanzania Mainland and 30,045 ha (0.3 percent) in Zanzibar. Out of the total area planted with cereals, 6,855,270 ha (79.4 percent) were harvested out of which 6,827,902 ha (99.6 percent) were in Tanzania Mainland and only 27,367 ha (0.4 percent) in Zanzibar.

Maize with 6,067,996 ha (70.2 percent) occupied the largest portion of the planted area, followed by paddy (1,455,564 ha; 16.8 percent), sorghum (835,042 ha; 9.7 percent), bulrush millet (226,013 ha; 2.6 percent), finger millet (32,364 ha; 0.4 percent) and wheat (21,793 ha; 0.3 percent).

Figure 3.1(a): Percentage Share of Planted Area (ha) For Cereals , Tanzania,2016/17AASS

Among cereals, maize had the largest harvested area of 4,901,222 ha (71.5 percent) of which 4,896,306 ha were in Tanzania Mainland and 4,916 ha in Zanzibar. It was followed by paddy with 991,909 ha (14.5 percent) of which 970,141 ha were in Mainland and 21,768 ha in Zanzibar. Sorghum was third with a total harvested area of 708,471 ha (10.3 percent) in which 707,910 ha were in Tanzania Mainland and 560 ha in Zanzibar. Moreover, Bulrush millet had 205,838 ha (3.0 percent) of which 205,714 ha were in Mainland and 124 ha in Zanzibar, Both finger millet (28,259 ha; 0.4 percent) and wheat (19,571 ha; 0.3 percent) were grown in Mainland and (Figure 3.1(b)).

Figure 3.1(b): Percentage Share of Harvested Area (Ha) for Cereals Tanzania, 2016/17AASS

Maize production was also the highest among the cereals harvested. A total of 5,766,984 tonnes (74.3 percent) of maize were harvested, with 5,759,863 tonnes were from Tanzania Mainland and 7,120 tonnes from Zanzibar. Maize was followed by paddy (1,382,794 tonnes; 17.8 percent) of which 1,353,957 tonnes were harvested in Mainland and 28,837 tonnes in Zanzibar. Sorghum was third with a total production of 465,078 tonnes (6.0 percent) of which 464,806 tonnes were from Tanzania Mainland and 272 tonnes from Zanzibar. Moreover, bulrush millet had 103,605 tonnes (1.3 percent) of which 103,476 tonnes were harvested in Tanzania Mainland and 127 tonnes in Zanzibar. Wheat (24,385 tonnes ;0.3 percent) and finger millet (22,727 tonnes 0.3 percent) were also harvested. (Figure 3.1(c)).

Figure 3.1(c): Percentage Share of Cereal Production (tonnes) Tanzania, 2016/17 AASS

3.1.1 Maize

Maize was the most widely produced cereal crop in Tanzania and was grown by 7,431,144 operators of whom 7,406,070 (99.7 percent) were in Tanzania Mainland and 25,074 (0.3 percent) in Zanzibar. Results also indicate that 4,485,445 operators (60.4 percent) were engaged in maize production during long rainy season and 2,945,669 (39.6 percent) during short rainy season.

The total planted area for maize in Tanzania was 6,067,996 ha of which 6,062,433 ha (99.9 percent) were in Tanzania Mainland and 5,563 ha (0.1 percent) in Zanzibar. In Tanzania Mainland, Tabora Region (690,340 ha; 11.4 percent) had the largest maize planted area, followed by Tanga (494,683 ha; 8.2 percent) and Manyara (420,938 ha; 7.0 percent). Dar es Salaam Region (2,713 ha; 0.04 percent) had the smallest maize planted area with. In Zanzibar, Kaskazini Unguja (2,353 ha; 42.3 percent) had the largest area planted with maize, followed by Kaskazini Pemba with 2,008 ha (36.1 percent) while Mjini magharibi (316 ha; 5.7 percent) had the smallest maize planted area.

the Maize harvested area was 4,901,222 ha (80.5 percent of planted area) of which 4,896,306 ha were in Tanzania Mainland and 4,916 ha in Zanzibar. Furthermore, a total of 1,424,220 ha of

maize planted area were harvested during short rainy season and 3,477,002 ha in the long rainy season.

Results also reveal that, production of maize in Tanzania was 5,766,984 tonnes where 5,759,863 tonnes (99.9 percent) from Tanzania Mainland (yield of 2.2 tonnes/ha) and 7,120 tonnes (0.1 percent) from Zanzibar (yield of 3.1 tonnes/ha) In Tanzania Mainland, Mbeya Region recorded the highest maize production of 578,230 tonnes (10.0 percent) with crop yield of 3.7 tonnes/ha, followed by Tanga (555,222 tonnes, 9.6 percent) with yield of 2.3 tonnes/ha and Tabora with 551,343 tonnes(9.5 percent) with a yield of 2.2 tonnes/ha while Dar es Salaam Region reported the lowest maize production of 2,004 tonnes(0.03 percent) with crop yield of 1.9 tonnes/ha (Figure 3.2(a)).

Figure 3.2(a): Production (tonnes) of Maize by Region, Tanzania Mainland, 2016/17 AASS

Kaskazini Unguja Region (3,411 tonnes;47.9 percent) recorded the highest maize production in Zanzibar and a crop yield of 3.3 tonnes/ha, followed by Kaskazini Pemba (2,099 tonnes ;29.5percent) which had an average yield of 2.4 tonnes/ha while the lowest production was reported in Kusini Pemba with 269 tonnes (3.8 percent) and yield of 2.1 tonnes/ha (Figure 3.2(b)).

Figure3.2(b): Harvested Area (ha) and Production (tonnes) of Maize by Region, Zanzibar, 2016/17 AASS

3.1.2 Paddy

Paddy was the second most produced cereal crop in the country with 1,676,859 operators of whom 1,597,123 (95.2 percent) were in Tanzania Mainland and 79,736 (4.8 percent) in Zanzibar. During the short rainy season, a total number of 1,085,844 operators (64.8 percent) were engaged in paddy production and 591,016 operators (35.2 percent) in long rainy season.

Furthermore, the total area planted with paddy in Tanzania was 1,455,564 ha with 1,431,996 ha (98.4 percent) in Tanzania Mainland and 23,567 ha (1.6 percent) in Zanzibar. In Tanzania Mainland, Tabora Region (248,703;17.0 percent) had the largest area planted with paddy,

followed by Morogoro (221,864 ha; 15.2 percent) and Shinyanga (212,990 ha; 14.5 percent). Arusha Region (163 ha; 0.01 percent) had the smallest area planted with paddy. In Zanzibar, Kusini Pemba Region (8,196 ha; 34.8 percent) had the largest area planted with paddy, followed by Kaskazini Pemba (5,983 ha; 25.4 percent) while Mjini Magharibi (971 ha; 4.1 percent) had the smallest area planted.

The total area of paddy harvested in Tanzania was 991,909 ha: 970,141 ha (97.8 percent) in Tanzania Mainland and 21,768 ha (2.2 percent) in Zanzibar. Total production of paddy in Tanzania was 1,382,794 tonnes of which 1,353,957 tonnes (97.9 percent) were from Mainland and 28,837 tonnes (2.1 percent) from Zanzibar. The average yields of paddy was 2.5 tonnes/ha in Tanzania Mainland and 3.1 tonnes/ha in Zanzibar.

Morogoro Region with (332,280 tonnes ; 24.0 percent) and crop yield of 4.0 tonnes/ha had the highest paddy production in Tanzania Mainland, followed by Mbeya with 246,649 tonnes (17.8 percent) with a yield of 2.2 tonnes/ha and Tabora with 171,150 tonnes (12.4 percent) with yield of 2.9 tonnes/ha while Njombe Region had the lowest paddy production of 235 tonnes (0.02 percent) with crop yield of 4.0 tonnes/ha (Figure 3.3(a)).

Figure 3.3 (a): Harvested Area (ha) and Production (tonnes) of Paddy by Region in Tanzania Mainland, 2016/17 AASS

In Zanzibar, the total area of paddy harvested was 23,567 ha of which 21,768 ha resulting in production of 28,837 tonnes of paddy at an average yield of 3.1 ton/ha. The highest production of paddy was recorded in Kusini Unguja (9,990 tonnes), followed by Kusini Pemba (7,912 tonnes). Mjini Magharibi (1,823 tonnes) had the lowest production of paddy (Figure 3.3 (b)).

Figure 3.3(b): Area Harvested (ha) and Production (tonnes) of Paddy by Region, Zanzibar, 2016/17 AASS

3.1.3 Sorghum

In Tanzania a total of 1,112,487 operators were engaged in growing sorghum. Out of those 1,108,752 (99.7 percent) were in Tanzania Mainland and 3,735 (0.3 percent) in Zanzibar. The operators were 343,030 (30.8 percent) during the short rainy season, and 769,457 (69.2 percent) in the long rainy season.

The total area planted with sorghum was 835,042 ha of which 834,284 ha (99.9 percent) were in Tanzania Mainland and 758 ha (0.1 percent) in Zanzibar. The total production of sorghum was 465,078 tonnes of which 464,806 tonnes (99.9 percent) were from Tanzania Mainland and 272 tonnes (0.1 percent) from Zanzibar.

Among regions of Tanzania Mainland, Dodoma (257,690 ha; 31.0 percent) had the largest area planted with sorghum, followed by Singida (98,263 ha; 12.0 percent) and Simiyu (76,619 ha; 9.2 percent). Dar es Salaam Region (38 ha ;1.0 percent) had the smallest area planted with sorghum. In Zanzibar, four regions cultivated sorghum and Kaskazini Pemba (653 ha;86.1 percent) had the largest planted area while Kaskazini Unguja (18 ha; 2.4 percent) had the smallest area planted area with sorghum

The area of sorghum harvested in Tanzania was 708,471 ha (84.5 percent of planted area in Tanzania), of which 707,910 ha were in Tanzania Mainland and 560 ha in Zanzibar. The area harvested was 173,685 ha during short rainy season and 534,786 ha during long rainy season. Total production of sorghum in Tanzania was 465,078 tonnes of which 464,806 tonnes (99.9 percent) were from Tanzania Mainland (yield of 0.6 tonnes/ha) and 272 tonnes (0.1 percent) from Zanzibar (yield of 0.5 tonnes/ha).

Among regions in Tanzania Mainland, Dodoma (133,976 tonnes ;29.0 percent) was leading, followed by Singida (65,533 tonnes;14.1 percent) and Simiyu (42,167 tonnes; 9.1 percent) while the production of the Dar es Salaam Region at 9 tonnes and less than one percent was the lowest. Zanzibar had a total production of 272 tonnes (Figure 3.4).

Figure 3.4: Harvested Area (ha) and Production (tonnes) of Sorghum by Region, Tanzania Mainland, 2016/17 AASS

3.1.4 Wheat

Wheat was produced only in Tanzania Mainland by Arusha, Kilimanjaro, Njombe, Ruvuma, Iringa, Mbeya, Rukwa, and Manyara regions. It was grown by 30,254 operators of which 824 operators were engaged in production during short rainy season and 29,430 during long rainy season.

The total planted area with wheat in Tanzania was 21,793 ha, of which 914 ha (4.2 percent) were planted during the short rainy season and 20,879 ha (95.8 percent) in the long rainy season. Manyara Region (6,198 ha; 28.4 percent) had the largest area planted with wheat followed by Njombe (5,306 ha; 24.3 percent) and Rukwa (4,131 ha; 18.9 percent). Mbeya Region (187 ha 0.9 percent) had the smallest area planted with wheat.

Area harvested with wheat was 19,571 ha (89.8 percent of total area planted with wheat). A total of 24,385 tonnes of wheat were produced at an average yield of 1.2 tonnes/ha. Arusha Region recorded the highest wheat production of 8,221 tonnes at an average yield of 1.2 tonnes/ha followed by Manyara with (6,589 tonnes; 4.1 tonnes/ha), Njombe with (4,006 tonnes; 1.4 tonnes/ha) and Rukwa with (3,382 tonnes; 3.6 tonnes/ha) (Figure 3.5).

Figure 3.5: Harvested Area (ha) and Production (tonnes) of Wheat by Region in Tanzania Mainland, 2016/17 AASS

3.1.5 Bulrush Millet

Bulrush millet was another cereal crop grown by a few regions in Tanzania. The total number of operators engaged in the production of bulrush millet production was 258,045 of which 257,351 were in Tanzania Mainland and 694 in Zanzibar.

During the 2016/17 agriculture year, bulrush millet was planted on a total area of 226,013 ha of which 225,563 ha was in Tanzania Mainland and 157 ha in Zanzibar. In Mainland, Dodoma Region (123,788 ha 54.8 percent) had the largest area planted with bulrush millet, followed by Singida (58,834 ha; 26.0 percent) and Shinyanga (24,874 ha; 11.0 percent). Simiyu Region (338 ha; 0.1 percent) had the smallest area planted with bulrush millet. In Zanzibar, bulrush millet was cultivated in regions of Kaskazini Pemba (142 ha ;90.7 percent) and Kaskazini Unguja (15 ha; 9.3 percent).

Area harvested for bulrush millet was 205,838 ha (91.1 percent of the planted area) of which 205,714 ha were in Tanzania Mainland and 124 ha in Zanzibar. A total number of 23,112 ha of bulrush millet were harvested during the short rainy season and 182,726 ha in the long rainy season.

The results also disclose that in Tanzania Mainland production was 103,476 tonnes at an average yield of 0.5 tonnes/ha of which 11,032 tonnes were produced during short rainy season and 92,444 tonnes in long rainy season. Dodoma Region (43,800 tonnes;42.3 percent) led in production with, followed by Singida (34,836 tonnes; 33.7 percent) and Shinyanga (6,027 tonnes; 5.8 percent). The lowest production of bulrush millet was that of Kagera (39 tonnes; 0.04 percent). In Zanzibar, bulrush millet was produced by two regions: Kaskazini Pemba (127 tonnes) and Kaskazini Unguja.2 tonnes.(Table 3.1)

Table 3.1: Bulrush Millet Production and Yield by Region, Tanzania 2016/17 AASS

Region	Planted Area (ha)	Harvested Area (ha)	Quantity Harvest (tonnes)	Yield (tonnes/ha)
Dodoma	123,788	116,654	43,800	0.4
Singida	58,834	56,182	34,836	0.6
Tabora	4,382	4,018	10,601	2.6
Kigoma	3,530	3,530	2,303	0.7
Shinyanga	24,874	18,046	6,027	0.3
Kagera	466	466	39	0.1
Mwanza	8,243	5,371	4,765	0.9
Mara	652	652	625	1.0
Simiyu	338	338	434	1.3
Geita	456	456	46	0.1
Mainland	225,563	205,714	103,476	0.5
Kaskazini Unguja	15	15	2	0.1
Kaskazini Pemba	142	109	127	1.2
Zanzibar	157	124	129	1.00
Tanzania	226,013	205,838	103,605	0.5

3.1.6 Finger Millet

Finger Millet was only grown in Tanzania Mainland. It had a total of 74,086 operators engaged in production: 26,245 operators during the short rainy season and 47,841 in the long rainy season.

Finger millet had a total planted area of 32,364 ha of which 10,335 ha (31.9 percent) were planted during the short rainy season and 22,029 ha (68.1 percent) in long rainy season. The results also show that 28,259 ha (87.3 percent of the planted area) were harvested giving a total of 22,727 tonnes at an average yield of 0.8 tonnes/ha.

Ruvuma Region (5,778 tonnes; 25.5 percent) led in finger millet production. It was followed by Rukwa (5,740 tonnes; 25.3 percent) and Singida (2,978 tonnes; 13.1 percent). The region with the smallest production was Arusha with 43 tonnes (0.2 percent) (Figure 3.6).

Figure 3.6: Production (percent) of Finger Millet by Region, Tanzania Mainland, 2016/17 AASS

3.2 Roots and Tuber Crop Production

Roots and tuber crops grown in Tanzania include cassava, sweet potatoes, Irish potatoes, yams and cocoyams. These crops were produced during both, short and long rainy seasons but predominantly in the later for both Tanzania Mainland and Zanzibar. The total number of operators engaged in roots and tuber productions was 3,365,780 of which 3,202,615 (95.1 percent) were in Tanzania Mainland and 163,165 (4.9 percent) in Zanzibar.

The total area planted with roots and tuber was 1,292,942 ha of which 1,248,444 ha (96.6 percent) were in Tanzania Mainland and 44,497 ha (3.4 percent) in Zanzibar. Furthermore, the total harvested area was 692,028 ha of which 662,454 ha (95.7 percent) were in Tanzania Mainland and 29,575 ha (4.3 percent) in Zanzibar. The total production of roots and tuber was 1,122,637 tonnes of which 1,051,218 tonnes (93.6 percent) were in Tanzania Mainland and 71,419 tonnes (6.4 percent) in Zanzibar.

In the roots and tuber group of crops, cassava had the highest production of 628,610 tonnes (56.0 percent) in Tanzania of which 572,727 tonnes were from Tanzania Mainland and 55,884 tonnes in Zanzibar. Cassava followed by sweet potatoes (292,363 tonnes; 26.0 percent) of which

279,010 tonnes were harvested in Tanzania Mainland and 13,353 tonnes in Zanzibar. Irish potato was third with total production of 195,324 tonnes (17.4 percent) of which 195,280 tonnes were from Mainland and 44 tonnes from Zanzibar. Cocoyams was fourth with 3,742 tonnes (0.3 percent) of which 3,144 tonnes were harvested in Tanzania Mainland and 598 tonnes in Zanzibar, while yams was last with a production of 2,599 tonnes (0.2percent) of which 1,058 tonnes were harvested in Tanzania Mainland and 1,541 tonnes in Zanzibar (Figure 3.7).

Figure 3.7: Production (percent) for Roots and Tuber Crops in Tanzania, 2016/17 AASS

3.2.1 Cassava

Cassava had 2,072,914 operators of which 1,960,298 were in Tanzania Mainland and 112,616 in Zanzibar. The total planted area for cassava was 888,355 ha of which 853,015 ha (96.0 percent) were in Tanzania Mainland and 35,340 ha (4.0 percent) in Zanzibar. Among regions in Tanzania Mainland, Kigoma Region (138,251 ha ;16.2 percent) had the largest area planted of cassava, followed by Geita (127,807 ha; 15.0 percent) and Mwanza (114,654 ha; 13.4 percent). Kilimanjaro region (296 ha;0.03 percent) had the smallest cassava area planted with cassava. Kaskazini Pemba Region (11,564 ha;32.7 percent) had the largest area planted with cassava while Mjini Magharibi (1,616 ha; 4.6 percent) had the smallest.

The Total harvested area for cassava was 369,405 ha (58.8 percent of planted area) of which 347,499 ha were in Tanzania Mainland and 21,906 ha in Zanzibar. In Tanzania Mainland, Kigoma Region (138,251 ha;16.2 percent), had the largest harvested area, followed by Geita (127,807 ha; 15.0 percent) and Mwanza (114,654 ha; 13.4 percent). Kilimanjaro Region (296 ha;0.03 percent) had the smallest harvested area. In Zanzibar, Kaskazini Pemba Region (11,564 ha;32.7 percent) had the largest harvested area for cassava while Mjini Magharibi (1,616 ha; 4.6 percent).had the smallest area

Cassava production of cassava in Tanzania in 2016/17 was 628,610 tonnesof which 572,727 tonnes (91.1 percent) were produced in Mainland and 55,884 tonnes (8.9 percent) in Zanzibar. The highest production of cassava was reported in Kigoma Region (219,708 tonnes; 38.4 percent) followed by Geita (76,434 tonnes; 13.3 percent) and Mwanza (46,415 tonnes; 8.3 percent). The lowest production was in Kilimanjaro Region (384 tonnes; 0.07percent) (Figure: 3.8 (a)).

Figure 3.8(a): Harvested Area (ha) and Production (tonnes) of Cassava by Region in Tanzania Mainland, 2016/17 AASS

In Zanzibar, the highest cassava production was reported in Kaskazini Pemba Region (16,865 tonnes; 30.2 percent), followed by Kusini Pemba (15,438 tonnes; 27.2 percent) and Kaskazini

Unguja (13,119 tonnes; 23.5 percent). The lowest production was in Mjini Magharibi (3,374 tonnes; 6.0 percent) (Figure: 3.8 (b)).

Figure 3.8(b): Harvested Area (ha) and Production (tonnes) of Cassava by Region in Zanzibar, 2016/17 AASS

Results show that the average yield of cassava in Tanzania Mainland was 2.0 tonnes/ha. At regional level, Kigoma Region had the highest yield of 4.8 tonnes/ha, followed by Rukwa (3.0 tonnes/ha) and the lowest was that of Pwani Region (0.3 tonnes/ha). On the other hand, the average yield for cassava in Zanzibar was 2.6 tonnes/ ha with the highest yield being that of Kusini Unguja (2.9 tonnes/ha), followed by Kusini Pemba (2.74 tonnes/ha) while the lowest being that of Kaskazini Unguja (2.3 tonnes/ha).

3.2.2 Sweet Potatoes

Operators engaged in the production of sweet potatoes in Tanzania were 1,076,320 of which 1,040,772 (96.7 percent) were in Tanzania Mainland and 35,549 (3.3 percent) in Zanzibar. Results indicate that operators engaged in sweet potatoes production were 426,253 during short the rainy season and 614,519 during the long rainy season. In Zanzibar, Operators engaged in sweet potatoes production were 18,885 during short rainy season and 16,663 during the long rainy season.

The planted area for sweet potatoes in Tanzania was 331,475 ha of which 324,229 ha (97.8 percent) were in Tanzania Mainland and 7,246 ha (2.2 percent) in Zanzibar. In Tanzania Mainland, the region with the largest planted area for sweet potatoes was Tabora (75,469 ha;23.3 percent), followed by Mwanza (52,914 ha; 16.3 percent) and Simiyu (38,530 ha; 11.9 percent). Lindi Region (47 ha;0.01 percent) had the smallest area planted with sweet potatoes. In Zanzibar, Kaskazini Pemba Region (3,168 ha ;43.7 percent) had the largest area planted while Kusini Pemba (188 ha; 2.6 percent) had the smallest planted area.

The total harvested area for sweet potatoes was 260,299 ha of which 254,177 ha (97.6 percent) were in Tanzania Mainland and 6,121 ha (2.4 percent) in Zanzibar. In Tanzania Mainland, the region with the largest harvested area for sweet potatoes was Tabora, (57,365 ha;22.6 percent), followed by Mwanza (38,051 ha; 15.0 percent) and Simiyu (32,940 ha; 13.0 percent). Lindi Region (38 ha; 0.01 percent) had the smallest harvested area. In Zanzibar, Kaskazini Pemba Region (2,740 ha;44.8 percent) had the largest harvested area for sweet potatoes while Kusini Pemba (79 ha; 1.3 percent) had the smallest area.

The total production of sweet potatoes was 292,363 tonnes was of which 279,010 tonnes (95.4 percent) were in Tanzania Mainland and 13,353 tonnes (4.6 percent) in Zanzibar. The region with the highest production of sweet potatoes in Tanzania Mainland was Tabora (39,839 tonnes ;14.3 percent) followed by Simiyu (35,977 tonnes; 12.9 percent) and Mwanza (35,030 tonnes; 12.3 percent) while the region with the lowest production was in Lindi (59 tonnes; 0.02 percent) (Figure 3.9 (a)).

Figure 3.9(a): Harvested Area (ha) and Production (tonnes) of Sweet Potatoes by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the highest sweet potatoes production was in Kaskazini Unguja Region (4,752 tonnes; 35.6 percent), followed by Kaskazini Pemba (4,270 tonnes; 32.0 percent) and Kusini Unguja (3,516 tonnes; 26.3 percent). The lowest production was reported in Kusini Pemba (74 tonnes; 0.6 percent) (Figure 3.9(b)).

Figure 3.9(b): Harvested Area (ha) and Production (tonnes) of Sweet Potatoes in Zanzibar, 2016/17 AASS

In Tanzania Mainland, the highest average yield of sweet potatoes was in Manyara Region (4.6 tonnes/ha) followed by Mbeya (4.2 tonnes/ha) and Kigoma (3.9 tonnes/ha). The highest sweet potatoes yield in Zanzibar was in Kusini Unguja Region (6.6 tonnes/ha), followed by Kaskazini Unguja (5.0 tonnes/ha).

3.2.3 Irish Potatoes

In Tanzania Irish potatoes are only grown in Tanzania Mainland. The total number of operators engaged in growing Irish potatoes was 173,772 of which 64,239 operators grew them during the short rainy season and 109,533 operators in the long rainy season.

Planted area for Irish potatoes in Tanzania was 66,356 ha, and Njombe Region (26,727 ha; 40.3 percent) had the largest planted area of Irish potatoes, followed by Mbeya (18,436 ha; 27.8 percent) and Tanga (8,326 ha; 12.5 percent). The smallest planted was Dodoma Region (110 ha; 0.2 percent).

The harvested area for Irish potatoes was 57,458 ha, Njombe Region (21,822 ha; 38.0 percent) had the largest harvested area, followed by Mbeya (18,436 ha; 32.1 percent) and Tanga (6,845 ha; 12.5 percent) and the smallest harvested area was in Dodoma Region (110 ha; 0.2 percent) (Figure 3.10).

A total of 195,324 tonnes was produced and the region with highest production was Njombe Region (90,646 tonnes ;46.4 percent) , followed by Mbeya (68,800 tonnes, 35.2 percent) and Tanga (12,722 tonnes, 6.5 percent), while Dodoma (138 tonnes, 0.07 percent) had the lowest production. The highest average yield of Irish potatoes was that of Kilimanjaro Region (8.9 tonnes/ha), followed by Njombe (8.5 tonnes/ha) and Iringa (8.3 tonnes/ha).

Figure3.10: Harvested Area (ha) and Production (tonnes) of Irish Potatoes in Tanzania Mainland, 2016/17 AASS

3.2.4 Yams

Operators engaged in yams production were 11,903 of which 3,002 (25.2 percent) were in Tanzania Mainland and 8,901 (74.8 percent) in Zanzibar. Furthermore, 9,061 operators (76.1 percent) in Mainland were engaged during short rainy season and 2,842 (23.9 percent) in the long rainy season.

Yams were planted in an area of 2,256 ha of which 1,015 ha (45.0 percent) were in Mainland and 1,241 ha (55.0 percent) in Zanzibar. In Tanzania Mainland, Shinyanga Region (369 ha; 36.4 percent) had the largest area planted with yams, followed by Mtwara (225 ha; 22.2 percent) and Kagera (189 ha; 18.7 percent). Kigoma Region (92 ha; 9.1 percent). had the smallest area planted with Yams.

In Zanzibar, Kaskazini Unguja Region with 981 ha (79.1 percent) had the largest area planted, followed by Kusini Unguja (142;11.5 percent) while Mjini Magharibi (84 ha; 6.8 percent) had the smallest.

The yams' planted area harvested was 1,678 ha of which 646 ha (38.5 percent) were in Tanzania Mainland and 1,032 ha (61.5 percent) in Zanzibar. Total production of yams in Tanzania was 2,598 tonnes of which 1,058 tonnes (40.7 percent) were from Tanzania Mainland and 1,541 tonnes (58.3 percent) from Zanzibar. The average yield of yams was 3.2 tonnes/ha in Tanzania Mainland and 3.9 tonnes/ha in Zanzibar.

In Tanzania Mainland, Mtwara Region with 626 tonnes (59.2 percent) and yield of 2.8 tonnes/ha had the highest yams production, followed by Kagera (214 tonnes; 20.2 percent) and yield of 1.1 tonnes/ha and Morogoro (115 tonnes; 10.9 percent) with yield of 0.8 tonnes/ha Kigoma Region (102 tonnes;9.7 percent) with an crop yield of 1.1 tonnes/ha reported the lowest yams production (Figure 3.11(b)).

Figure 3.11(a): Area Harvested (ha) and Production (tonnes) of Yams by Regions in Tanzania Mainland, 2016/17 AASS

For the case of Zanzibar, Kaskazini Unguja was leading with production of 1,054 tonnes of yams, followed by Kusini Unguja (328 tonnes), while Mjini Magharibi recorded the lowest production of yams with a total production of 138 tonnes (Figure 3.11(b)).

Figure 3.11(b): Areas Harvested (ha) and Production (tonnes) of Yams by Regions, Zanzibar, 2016/17 AASS

3.2.5 Cocoyams

Cocoyam was grown by a few regions in Tanzania Mainland and all regions in Zanzibar. It engaged a total of 30,871 operators of which 24,845 (80.5 percent) were in Tanzania Mainland and 6,026 (19.5 percent) in Zanzibar. During the short rainy season, the number of operators who planted cocoyam were 11,646 (37.7 percent) while in the long rainy season they were 19,224 (62.3 percent).

The total area planted with cocoyam for Tanzania was 4,500 ha of which 3,843 ha (80.4 percent) were in Tanzania Mainland and 657 ha (14.6 percent) in Zanzibar. In Tanzania Mainland, Mbeya Region (1,607 ha; 41.8 percent) had the largest area planted with cocoyam followed by Kagera (1,435 ha; 37.3 percent) and Rukwa (467 ha; 12.2 percent). Kigoma Region (21 ha; 0.5 percent) had the smallest area planted with cocoyam. In Zanzibar, Kusini Unguja Region (390 ha; 59.4 percent) had the largest area planted with cocoyam, followed by Kaskazini Unguja (115 ha; 17.4 percent) while Kaskazini Pemba (25 ha; 3.9 percent) had the smallest area planted with cocoyams.

The total harvested area for cocoyams in Tanzania was 3,189 ha of which 2,688 ha (84.3 percent) were in Tanzania Mainland and 501 ha (15.7 percent) in Zanzibar. Total production of cocoyam in Tanzania was 3,742 tonnes of which 3,144 tonnes (84 percent) were in Tanzania Mainland and 598 tonnes (16 percent) in Zanzibar. The average yields of cocoyams was 2.5 tonnes/ha in Tanzania Mainland and 1.8 tonnes/ha in Zanzibar.

In Mainland, Mbeya Region with 1,629 tonnes (51.8 percent) and crop yield of 1.1 tonnes/ha had the highest cocoyam production, followed by Rukwa (739 tonnes; 23.5 percent) with a yield of 1.6 tonnes/ha and Kagera (438 tonnes; 13.9 percent) with a yield of 1.0 tonnes/ha while Kigoma Region (27 tonnes; 0.9 percent) had the lowest production of cocoyams and a crop yield of 1.3 tonnes/ha (Figure 3.12(a)).

Figure 3.12(a): Harvested Area(ha) and Production (tonnes) of Cocoyam by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the total area planted with cocoyams was 657ha of which 501ha were harvested resulting in a total production of 598 tonnes with an average yield of 1.8 ton/ha. The region with highest production of cocoyam was Kusini Unguja with 433 tonnes, followed by Kaskazini Unguja (72 tonnes). Kusini Pemba Region (7 tonnes) had the lowest production of cocoyams (Figure 3.12(b)).

Figure 3.12(b): Harvested Area (ha) and Production (tonnes) of Cocoyam by Region, Zanzibar, 2016/17 AASS

3.3 Pulses

Pulses which were found in this survey were beans, pigeon peas, cow peas and green grams. Others were bambaranuts, chick peas, green peas and soya beans. The number of operators growing pulses was 3,120,929 of whom 2,970,496 (95.2 percent) were in Tanzania Mainland and 26,366 (4.8 percent) in Zanzibar. All pulses were produced in both short and long rainy seasons. The total area planted with pulses was 1,194,801 ha of which 1,190,047 ha (99.6 percent) were in Tanzania Mainland and 4,754 ha (0.4 percent) in Zanzibar. The total quantity harvested was 541,470 tonnes with 540,822 tonnes (99.9 percent) in Tanzania Mainland and 648 tonnes (0.1 percent) in Zanzibar.

3.3.1 Beans

Beans was the most important pulse crop produced in the country by 1,945,607 operators of whom 1,945,229 (99.9 percent) were in Tanzania Mainland and 378 (0.1 percent) were in Zanzibar. During the short rainy season, the number of operators planted beans was 861,290 (44.3 percent) while in the long rainy season it was 1,084,317 (55.7 percent).

The area planted with beans was 732,531 ha of which 732,495 ha (99.9 percent) were in Tanzania Mainland and 37 ha (0.1 percent) in Zanzibar. In Tanzania Mainland, Kagera Region (124,142 ha;16.9 percent) had the largest area planted with beans, followed by Kigoma (99,753 ha; 13.6 percent) and Manyara (97,567 ha;13.3 percent). Lindi Region (5ha ;0.01) had the lowest area planted. In Zanzibar, two regions were growing beans, Kaskazini Unguja Region (30 ha;72.0 percent) and Kusini Pemba (7 ha; 28.0 percent).

The harvested area for beans was 605,751 ha of which 605,722 ha (99.9 percent) were in Tanzania Mainland and 30 ha (less than one percent) in Zanzibar. In Tanzania Mainland, Manyara Region (93,030 ha ;15.4 percent) had the largest harvested area of beans, followed by Kagera (88,672 ha; 14.6 percent) and Kigoma (87,589 ha; 14.5 percent). Lindi Region (5ha 0.01) had the smallest harvested area. In Zanzibar, only Kaskazini Unguja Region had harvested area of 30 ha for beans.

Total Production of beans in Tanzania was 378,893 tonnes of which 378,890 tonnes (99.9 percent) were in Tanzania Mainland and 3 tonnes (less than one percent) in Zanzibar. The average yield of beans was 0.6 tonnes/ha in Tanzania Mainland and 0.1 tonnes/ha in Zanzibar. In Tanzania Mainland, Kigoma Region had the highest beans, with 71,812 tonnes (19.0 percent) and yield of 0.8 tonnes/ha, followed by Kagera (58,068 tonnes; 15.3 percent) with a yield of 0.6 tonnes/ha and Manyara (52,647 tonnes; 12.8 percent) with yield of 0.6 tonnes/ha. Lindi Region (0.2 tonnes;0.01 percent) reported the lowest production. In Zanzibar only 3tonnes of beans were produced at an average yield of 0.1 tonnes/ha (Figure 3.13).

Figure 3.13: Harvested Area (ha) and Production (tonnes) of Beans by Region, Tanzania Mainland, 2016/17 AASS

3.3.2 Cowpeas

Cowpeas were produced by 412,727 operators of whom 392,833 (95.2 percent) were in Tanzania Mainland and 19,894 (4.8 percent) in Zanzibar. During the short rainy season, the number of operators planting cowpeas were 142,663 (34.6 percent) while in the long rainy season they were 270,064 (65.4 percent).

The total area planted with cowpeas was 102,716 ha of which 98,982 ha (96.4 percent) were in Tanzania Mainland and 3,734 ha (3.6 percent) in Zanzibar. In Tanzania Mainland, Tanga Region (18,599 ha, 18.8 percent) had the largest area planted with cowpeas, followed by Pwani (17,007 ha; 17.2 percent) and Tabora (11,813 ha; 11.9 percent). Mbeya Region (56 ha; 0.1 percent) had the smallest area planted with cowpeas. In Zanzibar, Kaskazini Pemba Region (1,384 ha; 37.1 percent) was leading with largest area planted with cowpeas, followed by Kusini Pemba (1,355 ha; 36.3 percent) while Mjini Magharibi (7 ha; 0.2 percent) had the smallest area.

The total area harvested for cowpeas was 85,283 ha of which 82,620 ha (96.9 percent) were in Tanzania Mainland and 2,662 ha (3.1 percent) in Zanzibar. In Tanzania Mainland, Pwani Region (16,140 ha; 19.5 percent) had the largest harvested area, followed by Tanga (11,516 ha; 13.9 percent) and Mtwara (10,929 ha; 13.2 percent). Mbeya Region (56 ha; 0.1 percent) had the smallest area harvested. In Zanzibar, Kusini Pemba Region (1,080 ha; 37.0 percent) had the largest harvested area followed by Kaskazini Pemba (962 ha; 33.0 percent) while Mjini Magharibi (5 ha; 0.2 percent) had the smallest harvested area.

Total production of cowpeas in Tanzania was 32,105 tonnes of which 31,560 tonnes (98.3 percent) were in Tanzania Mainland and 625 tonnes (1.7 percent) in Zanzibar. The average yields was 0.4 tonnes/ha in Tanzania Mainland and 0.3 tonnes/ha in Zanzibar. In Tanzania Mainland, Pwani Region with 10,546 (33.4 percent) and a crop yield of 0.7 tonnes/ha had the highest cowpeas production, followed by Mtwara (5,114 tonnes; 16.2 percent) with a yield of 0.5 tonnes/ha and Tabora with 4,183 tonnes (13.3 percent) and a yield of 0.4 tonnes/ha while Rukwa Region with 32 tonnes (0.1 percent) and a yield of 0.2 tonnes/ha had the lowest cowpeas production. (Figure 3.14(a)).

Figure 3.14(a): Harvested Area(ha) and Production (tonnes) of Cowpeas by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the harvested area of 2,662 ha resulting in the total production of 545 tonnes of cowpeas at an average yield of 0.2 tonnes/ha. The highest production of cowpeas was in Kusini Pemba Region (197 tonnes; 36.1 percent), followed by Kaskazini Pemba (188 tonnes; 34.4 percent). Kusini Unguja had the lowest production (3 tonnes ;0.6 percent) (Figure 3.14(b)).

Figure 3.14(b): Harvested Area (ha) and Production (tonnes) of Cowpeas by Region, Zanzibar, 2016/17 AASS

3.3.3 Green Grams

Green grams had a total of 517,704 operators of whom 511,985 (98.9 percent) were in Tanzania Mainland and 5,719 (1.1 percent) in Zanzibar. The number of operators were 223,175 (43.1 percent) in the shorty season and 294,529 (56.9 percent) in the long rainy season.

The total area planted with green grams was 217,473 ha of which 216,521 ha (99.6 percent) were in Tanzania Mainland and 952 ha (0.4 percent) in Zanzibar. In Mainland, Simiyu Region (46,819 ha ;23.2 percent) had the largest area planted, followed by Mtwara (40,885 ha; 20.3 percent) and Mwanza (36,294 ha; 18 percent). **Morogoro Region (1.0 ha; 0.1 percent)** had the smallest area planted. In Zanzibar, Kaskazini Unguja Region (591 ha;62.1 percent) had the largest planted for green grams, followed by Kusini Pemba (343 ha, 36.1 percent) while Mjini Magharibi (5 ha; 0.5 percent) had smallest area planted.

The total harvested area for green gram was 177,465 ha of which 176,861 ha (99.7 percent) were in Tanzania Mainland and 604 ha (0.3 percent) in Zanzibar. In Tanzania Mainland, Simiyu Region (40,236 ha; 22.8 percent), had the largest harvested area, followed by Mtwara (38,764 ha; 22.0 percent) and Mwanza (20,786 ha; 11.8 percent). Morogoro Region (1 ha; 0.01 percent) had the smallest area harvested. In Zanzibar, Kaskazini Unguja Region (522 ha ;86.4 percent) had the largest harvested area, followed by Kusini Pemba (72 ha; 11.9 percent) while Kusini Unguja (10 ha; 1.7 percent) had the smallest harvested area.

Total production of green gram in Tanzania was 73,073 tonnes of which 72,990 tonnes (99.9 percent) were in Tanzania Mainland and 83 tonnes (0.1 percent) in Zanzibar. The average yield of green grams was 0.4 tonnes/ha in Tanzania Mainland and 0.1 tonnes/ha in Zanzibar. In Tanzania Mainland, Mtwara Region with 17,054 tonnes (27.1 percent) and crop yield of 0.4 tonnes/ha had the highest green gram production, followed by Simiyu (11,738 tonnes; 18.6 percent) with a yield of 0.3 tonnes/ha and Mwanza (10,203 tonnes; 14.0 percent) with a yield of 0.4 tonnes/ha. Morogoro Region with 1 tonne and a yield of 0.7 tonnes/ha had the lowest green and grams production. (Figure 3.15).

Figure 3.15: Harvested Area(ha) and Production (tonnes) for Green Gram by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the highest production of green grams was recorded in Kaskazini Unguja with 75 tonnes (90.1 percent), followed by Kusini Pemba (7 tonnes; 8 percent). Kusini Unguja Region (2 tonnes; 1.9 percent) had the lowest production (Table 3.2).

Table 3.2: Harvested Area (ha) and Production (tonnes) of Green Gram by Region, Zanzibar, 2016/17 AASS

Region	Harvested Area (ha)	Production (tonnes)
Kusini Unguja	10	2
Kusini-Pemba	72	7
Kaskazini-Unguja	522	75
Zanzibar	604	84

3.3.4 Pigeon Peas

Pigeon peas were grown in both Tanzania Mainland and Zanzibar. A total number of 727,484 operators were involved, of whom 718,400 (98.8 percent) were from Tanzania Mainland and 9,044 (1.2 percent) from Zanzibar. The area planted with pigeon peas was 335,397 ha of which 333,559 ha (99.5 percent) were in Tanzania Mainland and 1,838 ha (0.5 percent) in Zanzibar.

In Tanzania Mainland, Mtwara Region (69,780 ha; 20.9 percent) had the largest area planted with pigeon peas, followed by Ruvuma (42,472 ha; 12.7 percent) and Manyara (41,971 ha; 12.6 percent). Mbeya Region (98 ha; 0.1 percent) had the smallest area planted with pigeon peas. In Zanzibar, Kaskazini Unguja Region (1,565 ha ; 84.9 percent) had the largest area planted with peagon peas, followed by Kusini Unguja (209 ha; 11.3 percent) while Kusini Pemba (14 ha; 0.8 percent) had the area smallest planted. (Figure 3.16(a)).

Figure 3.16(a): Harvested Area (ha) and Production (tonnes) of Pigeon Peas by Region, Tanzania Mainland, 2016/17 AASS

The total harvested area for pigeon peas was 273,488 ha, of which 272,173 ha (99.5 percent) were in Tanzania Mainland and 1,314 ha (0.5 percent) in Zanzibar. In Tanzania Mainland, Mtwara Region (65,113 ha; 23.9 percent) had the largest harvested area with pigeon peas, followed by Ruvuma (34,854 ha; 12.8 percent) and Manyara (33,100 ha; 12.7 percent). Mbeya Region (98 ha; 0.04 percent) had the smallest area harvested. In Zanzibar, Kaskazini Unguja was leading with 1,070 ha (81.4 percent), followed by Kusini Unguja (207 ha; 15.8 percent) while Kusini Pemba (14 ha; 1.1 percent) had the smallest area. (Figure 3.16(b)).

Figure 3.16(b): Harvested Area (ha) and Production (tonnes) of Pigeon Peas by Region, Zanzibar, 2016/17 AASS

The total production of pigeon peas was 140,672 tonnes of which 140,366 tonnes (99.8 percent) were from Mainland and 306 tonnes (0.2 percent) from Zanzibar. In Tanzania Mainland, Mtwara Region (30,006 tonnes; 21.3 percent) had the highest pigeon peas production, followed by Ruvuma with 22,384 tonnes (15.9 percent) and Manyara (15,925 tonnes, 11.3 percent). Katavi Region (53 tonnes ; 0.04 percent) had the lowest pigeon peas production.

3.3.5 Other Pulses

Other pulses were chick peas, bambaranuts and green peas, all these were grown during both short and long rainy seasons. A total of 244,890 operators were involved in cultivating other pulses of whom 244,516 (99.8 percent) were in Tanzania Mainland and 375 (0.2 percent) in Zanzibar. The total planted area for other pulses was 142,081 ha of which 142,049 ha (99.9 percent) were in Tanzania Mainland and 32 ha (0.1 percent) in Zanzibar.

The total harvested area for other pulses was 122,743 ha of which 122,712 ha (99.9 percent) were in Tanzania Mainland and 31 ha (0.1 percent) in Zanzibar. Among other pulses, bambaranuts was the only crop which was planted in both Tanzania Mainland and Zanzibar.

3.4 Oil Seeds and Nuts Crops

Oil seeds and nuts which are grown in Tanzania include groundnuts, sunflower and sesame. Operators engaged in oil seeds and nuts production were 2,075,721 of whom 2,071,014 (99.8 percent) were in Tanzania Mainland and 4,707 (0.2 percent) in Zanzibar.

Planted area for oil seeds and nuts crops was 1,433,693 ha of which 1,433,088 ha (99.9 percent) were in Tanzania Mainland and 605 ha (0.1 percent) in Zanzibar. Total production of oils seeds and nuts was 626,187 tonnes of which 625,915 tonnes (99.9 percent) were in Tanzania Mainland and 272 tonnes (0.1 percent) in Zanzibar. The production of sunflower (352,908 tonnes; 56.4 percent) was higher than other oil seeds and nuts, it followed by groundnuts (216,433 tonnes; 34.6 percent) and Sesame (56,846 tonnes; 9.1 percent) (Figure 3.17).

Figure 3.17: Production (tonnes, percent) of Oil Seeds and Nuts, Tanzania, 2016/17 AASS

3.4.1 Sunflower

Sunflower ranks first in the production of oil seeds and nuts in Tanzania. Sunflower had a total of 661,809 operators of which 661,718 (99.9 percent) were in Tanzania Mainland and 91 (0.1 percent) in Zanzibar. In Tanzania, during the short rainy season, the number of operators

sunflower production was 79,774 (12. 1 percent) while in the long rainy season they were 582,036 (87.9 percent).

The total planted area for sunflower in Tanzania was 706,926 ha of which 706,913 ha (99.9 percent) were in Tanzania Mainland and 13 ha (less than 0.1 percent) in Zanzibar. In Tanzania Mainland, Dodoma (227,901 ha;33.3 percent) had the largest area planted, followed by Singida (156,134 ha; 22.8 percent) and Tabora (95,253 ha; 13.9 percent). Mtwara Region (50 ha ;0.1 percent) had the lowest planted area.

The total area of sunflower harvested in Tanzania was 605,859 ha of which 605,853 ha (99.9 percent) were in Tanzania Mainland and 6 ha (0.1 percent) in Zanzibar. Total production of sunflower in Tanzania was 352,908 tonnes of which 352,902 tonnes (99.9 percent) were in Tanzania Mainland and 6 tonnes (0.1 percent) for Zanzibar. The both average yield of sunflower was 1.0 tonnes/ha in both Tanzania Mainland and Zanzibar. In Tanzania Mainland, Tabora Region with 77,826 tonnes (22.1 percent), and yield 1.7tonnes/ha had the highest sunflower production, followed by Singida with 67,682 tonnes (19.2 percent) and yield of 0.5 tonnes/ha and Manyara with 63,612 tonnes (18.0 percent) and yield of 0.7tonnes/ha. while Mtwara Region 13 tonnes (0.01 percent) and yield of 0.3 tonnes had the lowest sunflower production of (Figure 3.18).

Figure 3.18: Harvested Area (ha) and Production (tonnes) of Sunflower by Region, Mainland, 2016/17 AASS

3.4.2 Groundnuts

Groundnuts ranks second in oil seeds and nuts production in Tanzania. It had a total of 1,131,217 operators of whom 1,126,601 (99.6 percent) were in Tanzania Mainland and 4,616 (0.4 percent) in Zanzibar. In Tanzania, during short rainy season, the number of operators planting groundnuts were 538,623 (47.6 percent) while in the long rainy season they were 592,594 (52.4 percent).

The total planted area in Tanzania was 494,113 ha of which 493,522 ha (99.9 percent) were in Mainland and 591 ha (less than 0.1 percent) in Zanzibar. In Tanzania Mainland, Tabora Region (147,618 ha; 29.8 percent), had the largest area planted with groundnuts, followed by Dodoma (53,067 ha; 10.8 percent) and Geita (52,655 ha; 10.7 percent). Dar es Salaam Region (179 ha; 0.04 percent) had the smallest planted area with groundnuts. In Zanzibar, the total planted area with groundnuts was 591 ha (0.1 percent).

The total harvested area for groundnuts in Tanzania was 398,438 ha of which 397,977 ha (99.9 percent) were in Tanzania Mainland and 462 ha (0.1 percent) in Zanzibar. The total production of groundnuts in Tanzania was 216,433 tonnes of which 216,167 tonnes (99.9 percent) were in Tanzania Mainland and 266 tonnes (0.1 percent) in Zanzibar.

In Tanzania Mainland, Tabora Region (44,811 tonnes; 20.7 percent) had the highest groundnuts production, followed by Dodoma (29,715 tonnes; 13.7 percent) and Mbeya (22,163 tonnes; 10.2 percent) while Dar es Salaam Region (39 tonnes; 0.02 percent) had the lowest groundnuts production of (Figure 3.19).

Figure 3.19: Harvested area (ha) and Production (tonnes) of Groundnuts by Region, Mainland, 2016/17 AASS

3.4.3 Sesame

Sesame was grown only in Tanzania Mainland and it ranks third in oil seeds and nuts production. It had a total number of 282,695 operators. In short rainy season, the number of operators planting sesame was 38,269 (13.5 percent) and 244,425 (86.5 percent) in the long rainy season.

The total planted area of sesame in Tanzania was 232,653 ha of which 49,848 ha (21.4 percent) were planted during the short rainy season and 182,805 ha (78.6 percent) in the long rainy season. In Tanzania Mainland, Lindi Region (44,531ha;19.1 percent), had the largest area planted with sesame, followed by Pwani (40,874 ha; 17.6 percent) and Dodoma (34,473 ha; 14.8 percent). Arusha Region (143 ha ;0.06 percent) had the smallest planted area.

The total harvested area for sesame was 201,169 ha of which 46,350 ha (20.0 percent) were harvested in short the rainy season and 154,819 ha (80.0 percent) in the long rainy season. Total production of sesame in Tanzania was 56,846 tonnes of which 4,774 tonnes (8.4 percent) were produced in the short rainy season and 52,072 tonnes (91.6 percent) in long the rainy season.

In Tanzania Lindi Region recorded the highest sesame production of with 13,300 tonnes (23.4 percent), followed by Pwani (9,314 tonnes; 16.4 percent) and Ruvuma (8,198 tonnes; 14.4

percent) while Shinyanga Region had the lowest Ssesame production with 22 tonnes (0.04 percent) (Figure 3.20).

Figure 3.20: Harvested Area (ha) and Production (tonnes) of Sesame by Region, Tanzania Mainland, 2016/17 AASS.

3.5 Fruits and Vegetables

The fruits and vegetables that are presented in this section are cabbage, amaranth, pumpkin, cucumber, eggplant, watermelon, okra and tomatoes. The number of operators growing various fruits and vegetables was 423,906 of whom 373,355 (88.1 percent) were in Tanzania Mainland and 50,551 (11.9 percent) in Zanzibar. The total planted area was 124,361 ha of which 114,488 ha (92.1 percent) were in Mainland and 9,873 ha (7.9 percent) in Zanzibar. The total harvested area of fruits and vegetables was 107,888 ha of which 99,226ha (92.0 percent) were in Tanzania Mainland and 8,663 ha (8.0 percent) in Zanzibar. The annual total production of various fruits and vegetables was 419,006 tonnes of which 382,594 tonnes (91.3 percent) were in Tanzania Mainland and 36,412 tonnes in Zanzibar (8.7 percent).

3.5.1 Tomato

Tomato was planted by 184,567 operators of whom 163,916 (88.8 percent) were in Tanzania Mainland and 20,651 (11.2 percent) in Zanzibar. During the short rainy season, the number of operators planting tomato was 90,275 (48.9 percent) while in the long rainy season they were 94,293 (51.1 percent).

The total planted area for tomatoes in Tanzania was 54,520 ha of which 50,645 ha (92.9 percent) were in Tanzania Mainland and 3,876 ha (7.1 percent) in Zanzibar. In Tanzania Mainland, Morogoro Region (19,195 ha ;37.9 percent) had the largest area planted of tomato, followed by Iringa (3,890 ha; 7.7 percent) and Kilimanjaro (3,890 ha; 7.7 percent). Singida Region (78 ha;0.2 percent) had the smallest area planted with tomato. In Zanzibar, Kaskazini Unguja Region with 1,423 ha (36.7 percent) had the largest area planted with tomato, followed by Kusini Unguja (890 ha; 23.0 percent) while the region with the smallest planted area was Kusini Pemba (208 ha; 5.4 percent).

The total harvested area for tomato in Tanzania was 45,604 ha of which 42,318 ha (92.8 percent) were in Mainland and 3,286 ha (7.2 percent) in Zanzibar. Total production of tomato in Tanzania was 247,135 tonnes of which 237,465 tonnes (96.1 percent) were in Tanzania Mainland and 9,670 tonnes (3.9 percent) in Zanzibar.

In Mainland, Morogoro Region with 155,745 tonnes (65.6 percent) had the highest tomato production, followed by Kilimanjaro (18,630.5 tonnes; 7.8 percent) and Mtwara (13,336 tonnes; 5.6 percent), while Singida Region (83 tonnes ;0.04 percent) had the lowest tomato production. (Figure 3.21(a)).

Figure 3.21(a): Harvested Area (ha) and Production (tonnes) of Tomato by Region, Tanzania Mainland, AASS 2016/17

In Zanzibar, the total planted area with tomato was 3,876 ha of which 3,286 ha were harvested resulting in a total production of 9,670 tonnes. Kusini Unguja Region with 3,444 tonnes, followed by Kaskazini Unguja (2,311 tonnes) had the highest production, followed by Mjini Magharibi (2,308 tonnes). Kusini Pemba (477 tonnes) was the least producer of tomato with a total production. (Figure 3.21(b)).

Figure 3.21(b): Harvested Area (ha) and Production (tonnes) of Tomato by Region, Zanzibar, 2016/17 AASS

3.5.2 Cabbage

Cabbage was planted by 18,886 operators of whom 18,760 (99.3 percent) were in Tanzania Mainland and 126 (0.7 percent) in Zanzibar. During the short rainy season, the number of operators planting cabbage were 9,632 (51.0 percent) while in the long rainy season they were 9,254 (49.0 percent)

The total planted area for Tanzania was 3,580 ha of which 3,565 ha (99.6 percent) were in Tanzania Mainland and 15 ha (0.4 percent) in Zanzibar. In Mainland, Morogoro Region (1,168 ha ;32.8 percent) had the largest planted area of cabbage with followed by Arusha (592 ha; 16.6 percent) and Mwanza (344 ha; 9.6 percent). Katavi Region (12 ha; 0.3 percent) had the smallest area planted with cabbage. In Zanzibar, the crop was only cultivated in two regions of Kusini Unguja (2 ha) and Mjini Magharibi (13 ha).

The total harvested area for cabbage in Tanzania was 2,013 ha of which 2,006 ha (99.7 percent) were in Mainland and 7 ha (0.3 percent) in Zanzibar. Total production of cabbage in Tanzania was 18,060 tonnes of which 18,034 tonnes (99.9 percent) were in Tanzania Mainland and 26 tonnes (0.1 percent) in Zanzibar.

In Tanzania Mainland, Rukwa Region with 5,534 tonnes (30.7 percent) had the highest cabbage prouction, followed by Arusha (5,362 tonnes; 29.7 percent) and Tanga (3,232 tonnes; 17.9 percent) while, Njombe Region with 2 tonnes (0.01 percent) had the lowest cabbage production. (Figure 3.22).

Figure 3.22: Harvested Area (ha) and Production (tonnes) of Cabbage by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the total area planted with cabbage was only 15ha of which 7 ha were harvested resulting in a total production of 26 tonnes of cabbage with at average yield of 3.9 ton/ha. The highest production of cabbage was recorded in Mjini Magharibi with 25 tonnes.

3.5.3 Amaranth

Number of operators engaged in amaranth production was 90,088 of which 82,535 (91.6 percent) were in Tanzania Mainland and 7,554 (8.4 percent) in Zanzibar. During the short rainy season, the number of operators planted amaranth were 46,781 (51.9 percent) while in the long rainy season they were 43,308 (48.1 percent).

The total planted area for amaranth in Tanzania was 23,573 ha of which 22,776 ha (96.6 percent) were in Tanzania Mainland and 798 ha (3.4 percent) in Zanzibar. In Tanzania Mainland, Tanga Region (15,982 ha; 70.2percent) had the largest area planted with amaranth, followed by Lindi (2,021 ha; 8.9 percent) and Kagera (904 ha; 4.0 percent). Simiyu Region (1ha ;0.01 percent) had the smallest area planted with amaranth).

In Zanzibar, Kaskazini Unguja Region with 279 ha (35.0 percent) had the largest area planted with amaranth, followed by Kusini Pemba (260 ha; 32.5 percent). Kusini Unguja (71 ha; 8.9 percent) had the smallest area.

The total harvested area for amaranth in Tanzania was 23,228 ha of which 22,449 ha (96.6 percent) were in Tanzania Mainland and 779 ha (3.4 percent) in Zanzibar. Total production of amaranth was 51,605 tonnes of which 50,841 tonnes (98.5 percent) were in Mainland and 764 tonnes (1.5 percent) in Zanzibar.

In Tanzania Mainland, Tanga Region with 46,150 tonnes (90.8 percent) had the highest amaranth production, followed by Mwanza (1,301 tonnes; 2.6 percent) and Njombe (872 tonnes; 2.6 percent) while Simiyu Region with 0.05 tonnes had the lowest amaranth production.

In Zanzibar, the total area planted for amaranths was 798 ha of which 779 ha was harvested resulting in a total production of 764 tonnes of amaranths. The highest production of amaranth was in Kaskazini Unguja with 297 tonnes, followed by Kusini Pemba (268 tonnes). Kusini Unguja (82 tonnes) had the lowest amaranths production. (Figure 3.23).

Figure: 3.23: Harvested Area (ha) and Production (tonnes) of Amaranth by Region, Zanzibar, 2016/17 AASS

3.5.4 Watermelon

Operators engaged in watermelon production were 32,203 of whom 28,446 (88.3 percent) were in Tanzania Mainland and 3,758 (11.7 percent) in Zanzibar. During the short rainy season, operators planting watermelon were 20,948 (65.0 percent) while in the long rainy season were 11,255 (35.0 percent).

The total area planted with watermelon in Tanzania was 18,556 ha of which 17,074 ha (92.0 percent) were in Tanzania Mainland and 1,482 ha (8.0 percent) in Zanzibar. In Tanzania Mainland, Pwani Region with 8,025 ha (47.0 percent) had the largest area planted with watermelon, followed by Dar es Salaam (2,191 ha; 12.8 percent) and Tabora (1,922 ha; 11.3 percent). Ruvuma Region with 43 ha (0.3 percent) had the smallest area planted with watermelon. In Zanzibar, Kaskazini Unguja Region with 810 ha (54.7 percent) had the largest area planted with watermelon, followed by Kusini Unguja (517 ha; 34.9 percent) while Kusini Pemba (21 ha; 1.4 percent) had the smallest area.

The total harvested area for watermelon in Tanzania was 14,585 ha of which 13,214 ha (90.6 percent) were in Mainland and 1,372 ha (9.4 percent) in Zanzibar. Total production of watermelon in Tanzania was 65,100 tonnes of which 49,342 tonnes (75.8 percent) were in Tanzania Mainland and 17,686 tonnes (24.2 percent) in Zanzibar.

In Tanzania Mainland, Pwani Region with 22,605 tonnes (45.8 percent) had the highest watermelon production, followed by Dar es Salaam (12,198 tonnes; 24.7 percent) and Tabora (3,911 tonnes; 7.9 percent) while Iringa Region with 1 tonnes (0.001 percent) had the lowest watermelon production (Figure 3.24(a)).

Figure 3.24(a): Harvested Area (ha) and Production (tonnes) of Watermelon by Region, Mainland, 2016/17 AASS

In Zanzibar, the total area planted with watermelon was 1,482 ha of which 1,372 ha were harvested, resulting in a total production of 17,686 tonnes of watermelon. The highest production of watermelon was that of Kaskazini Unguja with 7,076 tonnes, followed by Kusini Unguja (7,286 tonnes). Kaskazini Pemba (516 tonnes) was the lowest production of watermelon. (Figure 3.24(b)).

Figure 3.24(b): Harvested Area (ha) and Production (tonnes) of Watermelon by Region, Zanzibar, 2016/17 AASS

3.5.5 Cucumber

Cucumber had 6,780 operators of whom 3,680 (54.3 percent) were in Tanzania Mainland and 3,100 (45.7 percent) in Zanzibar. During the short rainy season, the number of operators planting cucumber was 2,230 (32.9 percent) while in the long rainy season they were 4,550 (67.1 percent).

The total planted area for cucumber in Tanzania was 1,948 ha of which 1,242 ha (63.8 percent) were in Tanzania Mainland and 706 ha (36.2 percent) in Zanzibar. In Tanzania Mainland, Ruvuma Region with 602 ha (48.5 percent) had the largest planted area of cucumber, followed by Arusha (231 ha; 18.6 percent) and Dar es Salaam (222 ha; 17.9 percent). Tabora Region with 5 ha (0.4 percent) had the smallest area planted with cucumber. In Zanzibar, Kusini Unguja Region with 285 ha (40.4 percent) led the area planted with cucumber, followed by Kaskazini Unguja (260 ha; 36.8 percent) while Kusini Pemba (6 ha; 0.9 percent) had the smallest area.

The total harvested area for cucumber in Tanzania was 1,594 ha of which 1,034 ha (64.9 percent) were in Tanzania Mainland and 560 ha (35.1 percent) in Zanzibar. Total production of cucumber was 5,197 tonnes of which 3,182 tonnes (61.2 percent) were in Tanzania Mainland and 2,015 tonnes (38.8 percent) in Zanzibar. In Tanzania Mainland, Arusha Region (867 tonnes ;27.3 percent) had the highest cucumber production, followed by Dar es Salaam (497 tonnes;15.6 percent). Pwani Region (1 tonne;0.04 percent) had the lowest cucumber production. (Figure 3.25(a)).

Figure 3.25(a): Harvested Area (ha) and Production (tonnes) of Cucumber by Region, Mainland, 2016/17 AASS

In Zanzibar, the total area planted with cucumber was 706 ha of which 560 ha were harvested resulting in a total production of 2,015 tonnes. The highest production of cucumber was in Kusini Unguja with 773 tonnes, followed by Mjini Magharibi (745 tonnes). Kusini Pemba (14 tonnes) had the lowest production of cucumber. (Figure 3.25(b)).

Figure 3.25(b): Harvested Area (ha) and Production (tonnes) of Cucumber by Region, Zanzibar, 2016/17 AASS

3.5.6 Pumpkins

The number of operators engaged in Pumpkins production was 33,020 of whom 28,079 (86.8 percent) were in Tanzania Mainland and 4,941 (15.0 percent) in Zanzibar. The number of operators involved in growing pumpkin during the short rainy season was 3,445 (10.4 percent) and 29,582(89.9 percent) in the long rainy season.

The total area planted with pumpkins in Tanzania was 7,411 ha of which 6,430 ha (86.8 percent) were in Tanzania Mainland and 980 ha (13.2 percent) in Zanzibar. In Tanzania Mainland, Pwani Region with 3,059 ha (47.6 percent) had the largest area planted with pumpkin, followed by Mtwara (1,822 ha; 28.3percent) and Tanga (529 ha; 8.2 percent). Tabora Region with 1 ha (0.01 percent) had the smallest area.

In Zanzibar, Kaskazini Unguja Region with 450 ha (45.9 percent) had largest planted area of pumpkins, followed by Kaskazini Pemba (254 ha; 25.9 percent). Kusini Pemba (14 ha; 1.4 percent) had the smallest area planted.

The total harvested area for pumpkins in Tanzania was 6,677 ha of which 5,833 ha (87.4 percent) were in Tanzania Mainland and 845 ha (12.6 percent) in Zanzibar. Total production of pumpkins in Tanzania was 5,548 tonnes of which 3,405tonnes (61.4 percent) were in Tanzania Mainland and 2,143 tonnes (38.6 percent) in Zanzibar.

In Tanzania Mainland, Tanga Region with 1,627 tonnes (47.8 percent), had the highest pumpkins production, followed by Mtwara (710 tonnes;20.9 percent) and Ruvuma (483 tonnes;14.2 percent). Simiyu Region 5 tonnes (0.1 percent) had the lowest pumpkins production.

In Zanzibar, the total area planted with pumpkins was 980 ha of which 845 ha were harvested resulting in a total production of 2,143 tonnes. The highest production of pumpkins was in Kaskazini Unguja with 990 tonnes, followed by Kusini Unguja (527 tonnes). Kusini Pemba (21 tonnes) had the lowest pumpkins production. (Figure 3.26).

Figure 3.26: Harvested Area (ha) and Production (tonnes) of Pumpkins by Region, Zanzibar, 2016/17 AASS

3.5.7 Egg Plant

Eggplant had 11,421 operators of whom 5,680 (49.7 percent) were in Tanzania Mainland and 5,741 (50.3 percent) in Zanzibar. During the short rainy season, eggplant was grown by 8,133 operators (71.2 percent) while in the long rainy season they were grown by 288 operators (28.8 percent).

The total area planted for eggplant in Tanzania was 3,408 ha of which 2,041 ha (59.9 percent) were in Tanzania Mainland and 1,367 ha (40.1 percent) in Zanzibar. In Tanzania Mainland, Lindi Region with 1,934 ha (94.8 percent) had the largest area planted with eggplant, followed by Mtwara (47 ha; 2.3 percent) and Kilimanjaro (36 ha; 1.8 percent). Dar es Salaam Region 24 ha; 1.2 percent) had the smallest area. In Zanzibar, Kusini Unguja Region with 615 ha (45.0 percent) had the largest area planted with eggplant, followed by Mjini Magharibi (407 ha; 9.8 percent) while Kusini Pemba (54 ha; 3.9 percent) had the smallest area.

The total harvested area for eggplant was 3,251 ha of which 2,041 ha (62.8 percent) were in Tanzania Mainland and 1,210 ha (37.2 percent) in Zanzibar. Total production of eggplant in was

9,783 tonnes of which 5,408 tonnes (55.3 percent) were in Tanzania Mainland and 4,375 tonnes (44.7 percent) in Zanzibar. In Tanzania Mainland, Lindi Region with 5,161 tonnes (95.4 percent) had the highest eggplant production, followed by Kilimanjaro (180 tonnes; 3.3 percent) and Mtwara (37 tonnes; 0.7 percent) while Dar es Salaam region had the lowest egg plant production of 29 tonnes (0.5 percent). (Table 3.3).

Table 3.3: Harvested Area and Production (tonnes) of Eggplant by Region, Tanzania, 2016/17 AASS

Region	Harvested Area (ha)	Production (tonnes)
Mtwara	47	37
Lindi	1,934	5,161
Kilimanjaro	36	180
Dar-es-salaam	24	29
Mainland	2,041	5,408
Kaskazini Unguja	290	856
Kusini Unguja	470	1,837
Kusini-Pemba	54	73
Mjini Magharibi	396	1,609
Zanzibar	1,210	4,375
Tanzania	3,251	9,783

In Zanzibar, the total area planted with eggplant was 1,367 ha of which 1,210 ha were harvested resulting in a total production of 4,375 tonnes. The highest production of eggplant was in Kusini Unguja with 1,837 tonnes, followed by Mjini Magharibi (1,609 tonnes). Kusini Pemba (73 tonnes) had the lowest production.

3.5.8 Okra

Operators engaged in okra production were 46,939 of whom 42,259 (90.0 percent) were in Tanzania Mainland and 4,680 (10.0 percent) in Zanzibar. During the short rainy 14,599 Operators (31.1 percent) planted okra while in the long rainy season they were 32,340 operators (68.9 percent).

The total area planted with okra in Tanzania was 11,366 ha of which 10,716 ha (94.3 percent) were in Tanzania Mainland and 650 ha (5.7 percent) in Zanzibar. In Tanzania Mainland, Njombe

Region (3,197 ha ;29.8 percent) had the largest area planted with okra, followed by Pwani (2,108 ha; 19.7 percent) and Dar es Salaam (1,342 ha; 12.5 percent) while Simiyu Region (4 ha; 0.0 percent) had the smallest area. In Zanzibar, Mjini Magharibi with 312 ha (48.0 percent) had the largest area planted with okra, followed by Kaskazini Unguja (244 ha; 37.5 percent) while Kusini Pemba (30 ha; 1.9 percent) had the smallest planted area.

The total harvested area for okra in Tanzania was 10,936 ha of which 10,331 ha (97.9 percent) were in Tanzania Mainland and 605 ha (2.1 percent) in Zanzibar. Total production of okra in Tanzania was 16,844 tonnes of which 15,183 tonnes (90 percent) were in Tanzania Mainland and 1,661 tonnes (10 percent) in Zanzibar.

In Tanzania Mainland, Pwani Region with 9,600 tonnes (19.7 percent) had the highest okra production, followed by Tanga (1,634 tonnes; 8.4 percent) and Dar es Salaam (1,297 tonnes; 12.5 percent). Rukwa Region with 1 tonnes (0.1 percent) had the lowest okra production. (Figure 3.27(a)).

Figure 3.27(a): Harvested Area (ha) and Production (tonnes) of Okra by Region, Tanzania Mainland, 2016/17 AASS

In Zanzibar, the total area planted with okra was 650 ha of which 605 ha were harvested resulting in a total production of 1,239 tonnes at an average yield of 2.0 tonnes/ha. The highest production

of okra was in Kaskazini Unguja with 746 tonnes, followed by Mjini Magharibi (712 tonnes). Kusini Pemba (25 tonnes) had the lowest okra production. (Figure 3.27(b)).

Figure 3.27(b): Harvested Area (ha) and Production (tonnes) of Okraby Region, Zanzibar, 2016/17 AASS

3.6 Fiber Crops

Fiber crops are plants that are grown for the production of fibers or fibrous materials with different uses such as paper making, cloth and rope making. This survey identified two fiber crops which are cotton and sisal.

3.6.1 Cotton

Cotton is among the major cash crops in Tanzania and was grown in Tanzania Mainland. A total of 381,021 operators were engaged in growing cotton in 2016/17 the agricultural year. The total area planted with cotton was 397,491 ha where by 79,309 ha were planted during the short rainy season and 397,491 ha in the long rainy season. Simiyu Region (179,728ha; 45.2 percent) had the largest area planted with cotton, followed by Shinyanga (77,540 ha; 19.5 percent) and Geita (57,918ha; 14.6 percent). Kagera Region (288 ha; 0.1 percent) had the smallest area planted.

A total of 328,751 ha (82.7 percent of the total planted area with cotton) was harvested. Due to various reasons, 27.3 percent of the planted area was not harvested. These reasons include, drought, rain/flood damage, theft and animal damage. In Tanzania Mainland, Simiyu Region with 166,512ha (50.6 percent) had the largest area of cotton harvested, followed by Shinyanga (56,418 ha; 17.2 percent) and Geita (49,374ha; 15.0 percent). Kagera Region (288 ha; 0.1 percent) had the smallest harvested area.

The total production for cotton was 194,626 tonnes. Simiyu Region (91,190 tonnes; 46.9 percent) had the highest production of cotton, followed by Shinyanga (42,015 tonnes; 21.6 percent) and Geita (30,460 tonnes; 15.7 percent). Kagera Region with 352 tonnes; 0.1 percent) had the lowest cotton production. (Figure 3.28).

Figure 3.28: Harvested Area (ha) and Production (tonnes) of Cotton by Region, Tanzania, 2016/17 AASS

3.6.2 Sisal

Sisal was grown in only four regions of Tanzania Mainland. A total of 5,475 operators were engaged in growing sisal with a total area of 79,216 ha. Tanga Region (50,174 ha ;63.3 percent) had the largest area planted with sisal, followed by Pwani (25,350 ha; 32.0 percent) and Kilimanjaro (2,550 ha; 3.2 percent). Arusha Region (1,142 ha; 1.4 percent) had the smallest area planted with sisal.

A total of 70,767 ha (89.0 percent of the total planted area with sisal) was harvested, while 11.0 percent of the planted area was not harvested due various reasons. Tanga Region (42,336 ha; 59.8 percent) had the largest harvested area of sisal, followed by Pwani (25,350 ha; 35.8 percent) and Kilimanjaro (1,939 ha; 2.7 percent). Arusha Region (1,142 ha; 1.6 percent) had the smallest harvested area.

Total production of sisal was 63,796 tonnes, and Tanga Region (51,356 tonnes; 80.5 percent) had the highest production, while the lowest production was in Kilimanjaro Region with 878 tonnes (1.4 percent). (Table 3.4).

Table 3.4: Harvested Area (ha) and Production (tonnes) of Sisal by Region, 2016/17 AASS

Region	Planted Area (ha)	Harvested Area (ha)	Production (tonnes)	Yield (tonnes/ha)
Arusha	1,142	1,142	5,704	5
Kilimanjaro	2,550	1,939	878	0.5
Pwani	25,350	25,350	5,858	0.2
Tanga	50,174	42,336	51,356	1.2
Tanzania	79,216	70,767	63,796	2

3.7 Permanent Crops

Perennial or permanent crops refer to crops that normally take over a year to mature and/or once matured can be harvested for a number of years. Among important permanent crops grown in Tanzania are cashew nuts, banana, sugar cane, oil palm, coffee, tea, orange, mango and cloves. A total number of 2,476,004 operators were engaged in growing permanent crops of which 2,230,292 were in Tanzania Mainland and 245,712 in Zanzibar.

The total area planted with permanent crops was 1,389,768 ha of which 1,342,410 ha (97 percent) were in Tanzania Mainland and 47,357 ha (3 percent) in Zanzibar. From the total planted area with permanent crops, 961,493 ha (69 percent) were harvested: 923,750 ha (96 percent) in Tanzania Mainland and 37,743 ha (39 percent) in Zanzibar.

In the total area planted with permanent crops, cashew nuts (695,779 ha; 50.1 percent) had the largest share, followed by banana (147,074 ha; 10.6 percent), coconut (74,316 ha; 5.3 percent), coffee (60,370 ha; 4.3 percent), sugar cane (53,398 ha; 3.8 percent), mangoes (51,917 ha; 3.7 percent), oranges (34,085 ha; 2.5 percent), oil palm (9,742 ha; 0.7 percent), and cloves (9,087 ha; 0.65 percent). Other permanent crops which occupied 254,000 ha (18.3 percent of total planted area with permanent crops in Tanzania) (Figure 3.29(a)).

Figure 3.29(a): Percentage Share of Area Planted (ha) with Permanent Crops, Tanzania, 2016/17 AASS

In the harvested area for permanent crops, cashew nut had the largest share of 574,072 ha (59.7 percent), followed by banana (114,612 ha; 11.9 percent), coconut (69,117 ha; 7.2 percent), coffee (47,731 ha; 5.0 percent), sugar cane (39,541 ha; 4.1 percent), mangoes (23,066 ha; 2.4 percent), oranges (21,375 ha; 2.2 percent), oil palm (7,717 ha; 0.8 percent) and cloves (7,384 ha; 0.8 percent). The harvested area for other permanent crops was 56,878 ha (6 percent of total harvested area).

With respect to production, sugar cane (590,895 tonnes; 31.4 percent) had the highest production among the permanent crops harvested in Tanzania, It was followed by banana (487,500 tonnes; 25.9 percent), cashew nuts (387,970 tonnes; 20.6 percent), coconut (133,596 tonnes; 7.1 percent), mangoes (78,427 tonnes; 4.2 percent), coffee (42,940 tonnes; 2.3 percent), palm oil (16,593

tonnes; 0.9 percent), oranges (9,839 tonnes; 0.5 percent) and cloves (6,307 tonnes; 0.3 percent). Other permanent crops produced 128,012 tonnes (6.8 percent of total production of permanent crops in Tanzania) (Figure 3.29(b)).

Figure 3.29(b): Area Harvested (ha) and Production (tonnes) of Permanent Crops, Tanzania, 2016/17 AASS

3.7.1 Cashewnuts

Cashew nuts was cultivated in Tanzania Mainland by 666,848 operators. About 90 percent of the area planted with cashew nuts was found in three regions of Mtwara, Lindi and Pwani.

The total planted area with cashew nuts was 695,779 ha. Mtwara Region (327,281 ha ;47.0 percent) had the largest area planted with cashew nuts, followed by Lindi (207,951 ha.;29.9 percent) and Pwani (91,815 ha; 13.2 percent). Dar es Salaam Region (1,292 ha ;0.2 percent) had the smallest planted area. The total harvested area was 574,072 ha (83 percent of total planted area). Mtwara Region (308,835 ha ;53.8 percent) had the largest harvested area, followed by Lindi (185,065 ha; 32.2 percent) and Pwani (49,908 ha; 8.7 percent). Dar es Salaam Region with 1,078 ha, (0.2 percent) was the smallest harvested.

The total production of cashew nuts was 387,970 with Mtwara Region (191,025 tonnes (;9.2 percent) having the highest production, followed by Lindi (126,353 tonnes; 32.6 percent) and

Pwani (58,337 tonnes; 15.0 percent) while Dar es Salaam (523 tonnes; 0.1 percent) had the lowest production. (Figure 3.30).

Figure 3.30: Harvested Area (ha) and Production (tonnes) of Cashew nuts by Region, Mainland, 2016/17 AASS

3.7.2 Banana

The total number of operators engaged in banana production was 597,452 where by 533,733 were in Tanzania Mainland and 63,719 in Zanzibar. The total planted area was 147,074 ha of which 134,792 ha in Mainland and 12,282 ha Zanzibar. In Tanzania Mainland Kagera Region (53,504 ha ;38.9 percent) had the largest planted area, followed by Kilimanjaro 16,665 ha (12.1 percent) and Mbeya (13,991 ha;11.9 percent). Singida Region (34ha.;0.02 percent) had the smallest planted area. In Zanzibar, Kusini Pemba Region (4,265 ha ;34.7 percent) had the largest planted area, followed by Kaskazini Unguja with 2,872 ha (23.3 percent). Mjini Magharibi (818 ha ;6.6 percent). had the smallest area.

Out of the total area planted with banana, 114,612 ha (78.3 percent of planted area) was harvested with 104,210 ha in Tanzania Mainland and 10,402 ha in Zanzibar. In Tanzania Mainland, Kagera Region (34,261 ha (32.9 percent) had the largest harvested area, followed by Kilimanjaro (14,672 ha;14.1 percent) and Mbeya (13,672 ha;13.1 percent). **Shinyanga Region had the least area harvested of 23 ha (less than one percent).** In Zanzibar Kusini Pemba Region (3,620 ha :34.8

percent) had the largest harvested area, followed by Kaskazini Unguja (2,428 ha;23.3 percent) and Kaskazini Pemba (2,309 ha;22.2 percent). Mjini Magharibi (685 ha; 6.6 percent).had the smallest harvested area.

The total production was 487,500 tonnes,458,975 tonnes (94 percent) in Tanzania Mainland and 28,524 (6 percent) in Zanzibar. In Mainland, Kagera Region (196,511 tonnes;43.0 percent) had the highest production, followed by Mbeya (76,797 tonnes,16.7 percent), and Kilimanjaro (69,714 tonnes;15.3 percent). Iringa Rrgion (4 tonnes; 0.02 percent) had the lowest production. The average yield of banana was 2.7 tonnes/ha: ranging from 0.1 tonnes/ha in Iringa to 5.7 tonnes/ha in Kagera.

In Zanzibar, total banana production was 28,524 tonnes. Kusini Pemba Region (10,498 tonnes; 36.8 percent) had the highest production., followed by Kaskazini Pemba (7,141 tonnes; 25.0 percent) and Kaskazini Unguja (5,393.3 tonnes; 18.9 percent). Mjini Magharibi with 1,673 tonnes; (5.9 percent) had the lowest production. The average yield of banana in Zanzibar was 2.7 tonnes/ha with the highest yield being 3.1 tonnes/ha in Kaskazini Pemba. (Figure: 3.31).

Figure 3.31: Production(percent) of bananas by region, Zanzibar, 2016/17 AASS

3.7.3 Coconuts

Coconut is mainly grown along the eastern coast of the country. Total number of operators engaged in the cultivation for coconut in Tanzania was 227,827 (177,043 in Tanzania Mainland and 50,784 Zanzibar). The total planted area was 74,316 ha (63,373 ha, 85 percent) in Tanzania Mainland and 10,943 ha (15 percent) in Zanzibar. In Tanzania Mainland coconut was cultivated in five regions with three regions (Pwani, Lindi and Tanga) contributing to 94.3 percent to the total cultivated area. Pwani Region (37,805 ha ;69.7 percent) had the largest planted area of coconut followed by Lindi with 11,249 ha (17.8 percent) and Tanga (10,649 ha; 16.8 percent).

Total harvested area for coconuts in Tanzania was 69,117 ha (60,905 ha in Mainland and 8,212 ha in Zanzibar). The average yield of coconut was 2 tonnes/ha in both Tanzania Mainland and Zanzibar. In Tanzania Mainland, Pwani Region with 37,098 ha (60.9 percent) had the largest harvested area, followed by Lindi with 11,249 ha (18.5 percent) and with Tanga 9,396 ha (15.4 percent).

The total production of coconut in the Tanzania was 133,596 tonnes with Tanzania Mainland contributing 118,017 tonnes and Zanzibar 15,579 tonnes. In Tanzania Mainland Pwani Region (93,244 tonnes ;79.0 percent) had the highest production of coconut, followed by Tanga with 13,488 ha (11.4 percent) and Lindi with 4,920 tonnes (4.2 percent) (Figure 3.32(a)).

Figure 3.32(a): Harvested area and production of coconut by region, Tanzania Mainland, 2016/17 AASS

In Zanzibar coconut was produced in all 5 regions. Kaskazini Pemba Region (3,986 ha;36.4 percent) had the largest planted area, followed by Kusini Unguja with 2,544 ha (23.2 percent), and Kusini Pemba with 1,966 ha, (18.0 percent). Mjini Magharibi (874 ha ;8.0 percent) had the smallest planted area for coconut. The largest harvested area for coconut in Zanzibar was also found in Kaskazini Pemba with 2,763ha (33.7 percent), followed by Kusini Unguja 1,862 ha (22.7 percent) while Mjini Magharibi (843 ha;10.3 percent) had the smallest harvested area. Kaskazini Pemba had the highest production of 5,512 tonnes (35.4 percent), followed by Kusini Unguja (4,080 tonnes; 26.2 percent) and Kusini Pemba (2,370 tonnes; 15.2 percent). Mjini Magharibi has the lowest production 1,568 tonnes (10.1 percent).

Figure 3.32(b): Area Harvested (ha) and Production (tonnes)of coconuts by Regions, Zanzibar, 2016/17 AASS

3.7.4 Oranges

Oranges are grown in all regions of Tanzania but production varies. Orange cultivation involved 79,570 operators in the country, of which 63,356 operators were found in Tanzania Mainland and 16,214 in Zanzibar. The total area planted with oranges in Tanzania was 34,085 ha (32,129 ha in Tanzania Mainland and 1,955 ha in Zanzibar). In Tanzania Mainland, two regions of Tanga and Pwani had about 90 percent of the total planted area for oranges. Tanga (26,230 ha;81.6

percent) had the largest planted area, followed by Pwani with 2,592 ha (8.1 percent) and Mtwara with 1,173 ha (3.7 percent). Kagera Region with 1 ha had the smallest planted area.

Total harvested area for oranges in the country was 21,375 ha (63 percent of the planted area), with 19,879 ha coming from Mainland and 1,496 ha in Zanzibar. In Tanzania Mainland, Tanga Region with 18,994 ha, (85.5 percent) had the largest harvested area, followed by Pwani with 1,307 ha (6.6 percent) and Mtwara with 1,173 ha (5.9 percent). Kagera Region (2 ha;0.01 percent) had the smallest area. The average yield of oranges in Tanzania Mainland was 3.88 tonnes/ha.

The results show that 9,839 tonnes of oranges were produced in the country: 5,321 tonnes (54 percent) in Tanzania Mainland and 4,518 tonnes (46 percent) in Zanzibar. Tanga Region with 3,731 tonnes (70.1 percent) had the largest orange production, followed by Pwani (880 tonnes; 16.5 percent). Kagera (3 tonnes;0.03 percent) had the lowest orange production. (Figure 3.33(a)).

Figure 3.33(a): Harvested Area (ha) and Production (tonnes) of Oranges, Tanzania Mainland by Regions, AASS 2016/17

In Zanzibar, oranges were produced in all regions except Kaskazini Pemba. The leading region in area planted with oranges in Zanzibar was Mjini Magharibi with 677.4 ha (36.4 percent),

followed by Kusini Unguja with 408 ha (32.1 percent). Kusini Pemba (180 ha ;9.2 percent) had the smallest planted area. Total harvested area in Zanzibar was 1,496 ha (76.5 percent of the total planted area). Mjini Magharibi had the largest harvested area of 639.0 ha (34.6 percent), followed by Unguja with 408 ha (32.1 percent). Kusini Pemba (103 ha;(9.2 percent) had the smallest harvested area with the average yield of 9.47 tonnes/ha. The total production of oranges in Zanzibar was 21,769 tonnes; Mjini Magharibi had the highest production 18,724 tonnes (86 percent), followed by Kusini Unguja 1,840 tonnes (8.4 percent). Kusini Pemba (84 tonnes;0.4 percent) had the lowest production. (Figure 3.33(b)).

Figure 3.33(b): Area harvested (ha) and Production (tonnes) of Oranges in Zanzibar by Regions, AASS 2016/17

3.7.5 Oil Palm

In this survey, oil palm production was found in four regions of Tanzania Mainland. A total of 25,773 operators were engaged in oil palm production. The total area planted with oil palm was 9,742 ha of which 7,717 ha were harvested (79.2 percent of planted area). Kigoma Region with 6,819 ha (70.0 percent) had the largest planted area, followed by Mbeya with 2,102 ha (21.6 percent). The other two oil palm producing regions were Pwani (4.6 percent) and Katavi (3.2 percent). The total production was 16,593 tonnes from 7,717 ha harvested with an average yield

of 2.2 tonnes/ha. Kigoma Region with 10,192 tonnes (61.4 percent) had the highest production from 5,487 ha harvested, followed by Mbeya 5,918 tonnes (35.7 percent) from 2,031 ha harvested, while Pwani recorded the lowest production of 156 tonnes (0.9 percent) from 126 ha harvested (Figure 3.34).

Figure 3.34: Harvested Area (ha) and Production (tonnes) of Palm Oil by Region, Tanzania Mainland, 2016/17 AASS

3.7.6 Coffee

Coffee is among the major cash crops grown in Tanzania and is mostly produced in 7 regions of Tanzania Mainland. There were 183,343 operators engaged in production of coffee. The total area planted with coffee was 60,370 ha of which 47,731 ha were harvested (79.0 percent of planted area). The results further shows that, Kagera had the largest area planted with coffee 31,384 ha (51.9 percent) with production of 28,170 tonnes (65.5 percent of the total production) from 22,306 ha harvested, followed by Ruvuma with planted area of 12,362 ha (20.4 percent) and produced 7,171 tonnes (16.7 percent), and Mbeya Region with planted 7,996 ha (13.2 percent) and production of 4,092 tonnes (9.5 percent). Njombe Region (60 tonnes ;0.1 percent) had the lowest production of coffee. (Figure 3.35).

Figure 3.35: Production (percent) of Coffee by Region, Tanzania Mainland, 2016/17 AASS

3.7.7 Mango

Mango is among the most important fruits in Tanzania and grows almost in all regions though production varies. There were 202,679 operators growing mango in the country with Tanzania Mainland had 183,602 (90.5 percent) and 19,077 (9.5 percent) in Zanzibar. The total area planted with mangoes was 51,917 ha of which Mainland had 48,657 ha (93.7 percent) and Zanzibar had 3,260 ha (6.3 percent).

The total mango production in Tanzania was 78,427 tonnes with 88.6 percent from Tanzania Mainland and 11.4 percent from Zanzibar. The area harvested were 20,660 ha Tanzania Mainland and 2,406 ha in Zanzibar. The average yield of mangoes was in Tanzania Mainland 1.9 tonnes/ha and was 3.1 ton/ha.in Zanzibar.

In Tanzania Mainland, Pwani Region (23,895 ha;49.1 percent) had the largest mangoes planted area and produced 37,270 tonnes (53.6 percent) from 8,358 ha harvested. It was followed by Tanga with a planted area of 9,064 ha (18.6 percent) and produced 19,681 tonnes (28.3 percent) from 2,932 ha harvested and Dodoma Region with a planted area of 2,666 ha (5.5 percent) and produced 2,239 tonnes (12.8 percent) from a harvested area of 2,655 ha. Katavi recorded the lowest mango production of 11 tonnes (Figure 3.36(a)).

Figure 3.36(a): Harvested Area (ha) and Production (tonnes) of Mangoes by Region, Tanzania Mainland, 2016/17 AASS

All five regions in Zanzibar were involved in production of mangoes. Kaskazini Unguja Region (1,122 ha ;34.4 percent) had the largest planted area, followed by Kusini Unguja with 926 ha (28.4 percent). The total production of mangoes in Zanzibar was 8,886 tonnes. Kusini Pemba Region (3,060 tonne;34.4 percent) had the highest production of mangoes from 530 ha harvested, followed by Kaskazini Unguja with 2,812 tonnes (31.6 percent) from 867 ha harvested while and Kaskazini Pemba with 18 tonnes (0.2 percent) from 29 ha harvested had the lowest production (Figure 3.36(b)).

Figure 3.36(b): Harvested Area (ha) and Production (tonnes) of Mangoes by Region, Zanzibar, 2016/17 AASS

3.7.9 Cloves

There were 32,591 operators engaged in cloves production in Tanzania, out of whom 462 (1.4 percent) were in Tanzania Mainland and 32,130 (98.6 percent) in Zanzibar. The total area planted with cloves in Tanzania was 9,087 ha of which 157 ha (1.7 percent) were in Tanzania Mainland and 8,930 ha (98.3 percent) in Zanzibar. The total production of cloves in Tanzania was 6,307 tonnes. In Tanzania Mainland cloves was only produced Morogoro Region from where only 16 tonnes were produced.

Cloves is the most important cash crop in Zanzibar. The crop is grown in all five regions but Kusini Pemba with planted area of 4,966 ha (55.6 percent) and produced 4,276 tonnes (67.9 percent) from 4,296 ha harvested led in production, followed by Kaskazini Pemba (2,722 ha; 30.5 percent) and produced 1,651 tonnes (26.6 percent) from 2,218 ha harvested. Mjini Magharibi had the lowest production of 11 tonnes (0.2 percent of total production) from 39 ha (0.5 percent) harvested. (Figure 3.37).

Figure 3.37: Percentage Share of Clove Production by Region in Zanzibar, 2016/17 AASS

3.7.10 Other Permanent Crops

There are about 40 other permanent crops grown in Tanzania and which were included in the Annual Agriculture Sample Survey 2016/17. Those worth mentioning are avocado, tea and pineapples. Tea was cultivated in Tanzania Mainland only and involved 3,687 operators who planted 3,568 ha of land and harvested 27,967 tonnes.

There were 25,256 operators engaged in the production of avocado with 23,834 in Tanzania Mainland and 1,423 in Zanzibar. With a total planted area of 5,504 ha production of avocado was 19,449 tonnes of which 19,287 tonnes (99 percent) were from Tanzania Mainland. 36,461 operators engaged in pineapple production of whom 25,925 operators (71.1 percent) were in Mainland and 10,536 operators (29 percent) in Zanzibar. The total area planted with pineapples in Tanzania was 8,789 ha of which 7,416 ha (84 percent) were in Tanzania Mainland and 1,373 ha (16 percent) in Zanzibar. Total production of pineapples was 11,540 tonnes of which 5,572 tonnes (48.2 percent) were in Tanzania Mainland and 5,968 tonnes (51.7 percent) in Zanzibar. (Table 3.5).

Table 3.5: Area Planted, Harvested and Production for Other Permanent Crops, AASS 2016/17

Crop	Planted Area (ha)		Harvested Area (ha)		Production (tonnes)	
	Mainland	Zanzibar	Mainland	Zanzibar	Mainland	Zanzibar
Tea	3,568		3,568		27,967	
Avocado	5,344	160	3,745	99	19,287	162

Total	16,328	1,532	12,209	1,100	52,827	6,130

Chapter Four

4.0 Livestock Results

Tanzania is the third amongst countries with largest livestock population in Africa after Ethiopia and North Sudan¹. Livestock sector plays a significant contribution to the economy of Tanzania. In 2016/17, the sector growth was 2.8 percent and contributed 6.9 percent to GDP². The main types of livestock raised in Tanzania are cattle, goats, sheep, pigs and chicken. Products produced include meat, milk, hides, skin and eggs. Livestock also contributes to crop and vegetable production by providing draft power for cultivation and organic manure. It generates a considerable amount of cash income and determines the household economic and social status in many communities.

This section covers the Livestock Sector at National and Regional estimates in both Tanzania Mainland and Zanzibar. A total of 3,876,442 operators (44.0 percent) out of 8,763,267 agricultural operators involved in the Survey were found to engage in keeping livestock. Moreover, the reference date for livestock inventory estimates was as of 1st October 2017 while livestock products were collected with reference to agricultural year (1st October 2016 to 30th September 2017).

The main types of livestock covered in the 2016/17 Annual Agricultural Sample Survey were cattle, goats, sheep, pigs, chickens and donkeys. The dominant species was cattle with 30,496,687 heads followed by goats (18,947,657 heads), sheep (5,565,468 heads), donkeys (580,238 heads) and indigenous chicken (38,595,106 birds).

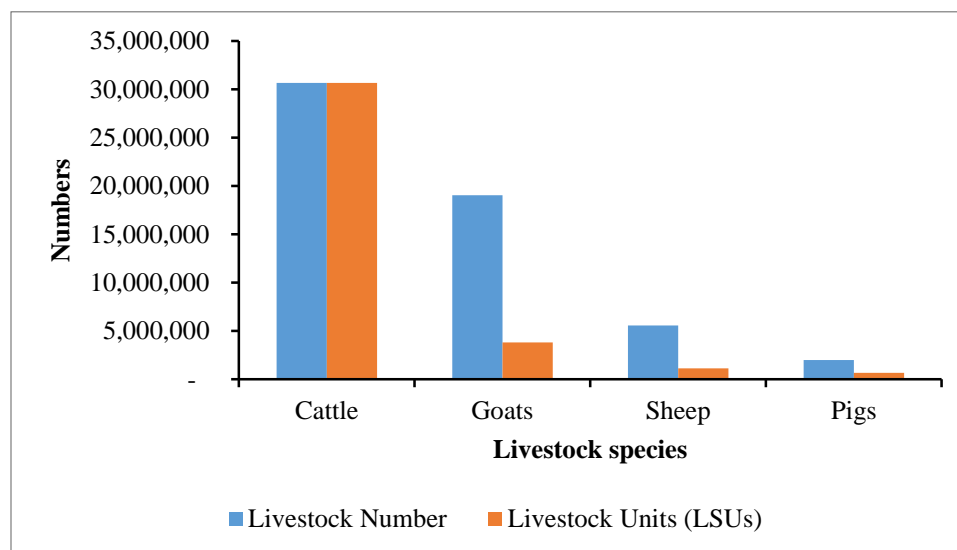

On expressing livestock number in terms of livestock units (LSU), the results show that, there was an equivalent of 36,262,342 livestock units in total representing 57,291,678 livestock of different species, mainly cattle, goats, sheep and pigs in the farms. The goat livestock units were about 3,811,130, while of sheep were 1,113,197 and pigs about 666,013 units. The LSU is used

¹FAO 2015, World Livestock Inventory: Ranking of Countries

²Tanzania Economic Survey Report 2016

to estimate total quantity of livestock based on cow having a LSU of 1, a goat or sheep 1/ 5 and a pig 1/3³.

Figure 4.1: Comparison of Livestock Numbers and Units

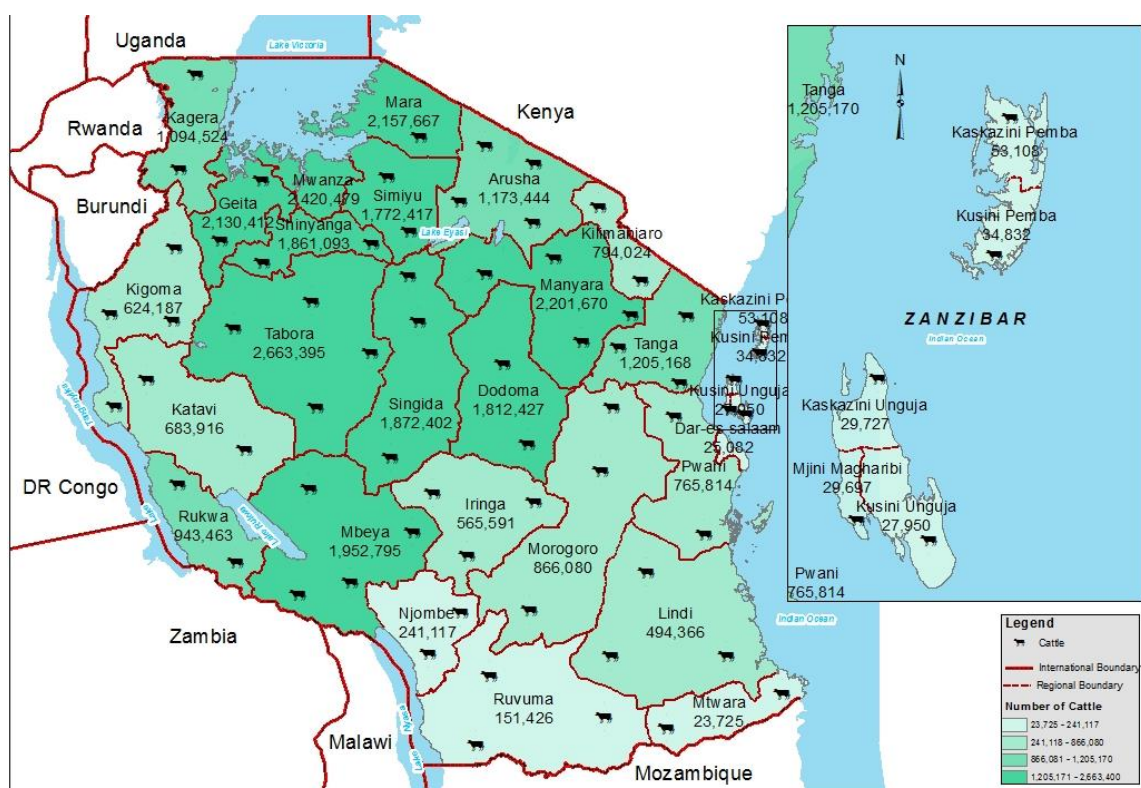

4.1 Cattle

A total number of 3,065,051 operators were engaged in cattle rearing of whom 3,006,308 operators (98.1percent) were in Tanzania Mainland and 58,743 (1.9 percent) in Zanzibar. The total number of cattle in Tanzania was 30,672,001 of which 30,496,687 heads (99.4 percent) were in Tanzania Mainland and 175,314 (0.6 percent) in Zanzibar.

The region with highest number of cattle in Tanzania Mainland was Tabora with 2,744,670 heads (8.7 percent of the total heads in Mainland) followed by Mwanza (2,088,719; 7.9 percent) and Manyara (2,161,718; 7.2 percent). In Zanzibar, Kaskazini Pemba Region with 53,108 heads (30.3 percent of the total heads in Zanzibar) had the highest number of cattle, followed by Kusini Pemba (34,832; 19.9 percent) and Kaskazini Unguja (29,727; 17 percent). Mtwara in Tanzania Mainland and Kusini Unguja in Zanzibar had the lowest cattle population (23,725; 0.1 percent) and (27,950; 15.9 percent) respectively.

³Livestock Technical Conversion Factors 2014

Map 4.1: Cattle Population by Region in Tanzania as of 1st October, 2017

4.1.1 Indigenous and Improved Cattle

The number of indigenous cattle in Tanzania Mainland was 30,220,917 (99 percent) and improved 275,770 (1 percent). In Zanzibar, number of indigenous cattle was 171,636 (97 percent) and improved 3,678 (3 percent). The regions with highest number of indigenous in Tanzania Mainland were Tabora (8.8 percent), Mwanza (8.0 percent) and Manyara (7.3 percent) while improved were in Mbeya (19.9 percent), Kilimanjaro (16.9 percent) and Kagera (11.3 percent). In Zanzibar, the region with the highest number of indigenous cattle was Kaskazini Pemba (45.5 percent), followed by Kusini Pemba (30.0 percent) and Kaskazini Unguja (25.3) and improved were in Mjini Magharibi (68.2 percent), Kaskazini Pemba (15.8) and Kaskazini Unguja (13.8 percent).

Oxen

A total of 4,845,492 oxen were recorded in Tanzania of which 4,842,528 oxen (99.9 percent) were in Mainland and 2,964 oxen (0.1 percent) in Zanzibar. The region with the highest number of oxen in Tanzania Mainland was Tabora (600,051 oxen; 12 percent) followed by Mwanza (525,681 oxen; 11 percent) and Shinyanga (479,250 oxen; 9 percent) while in Zanzibar the highest region was Kaskazini Pemba (1,507 oxen; 50 percent) followed by Kusini Unguja (648 oxen; 22 percent) and Mjini Magharibi (446; 15 percent). This indicates that cattle are an important part of the farming system in Tanzania considering the inadequate availability of tractors.

Figure 4.2: Distribution of Cattle by Category in Mainland as of 1st October, 2017

Figure 4.3: Distribution of Cattle by Category in Zanzibar as of 1st October, 2017

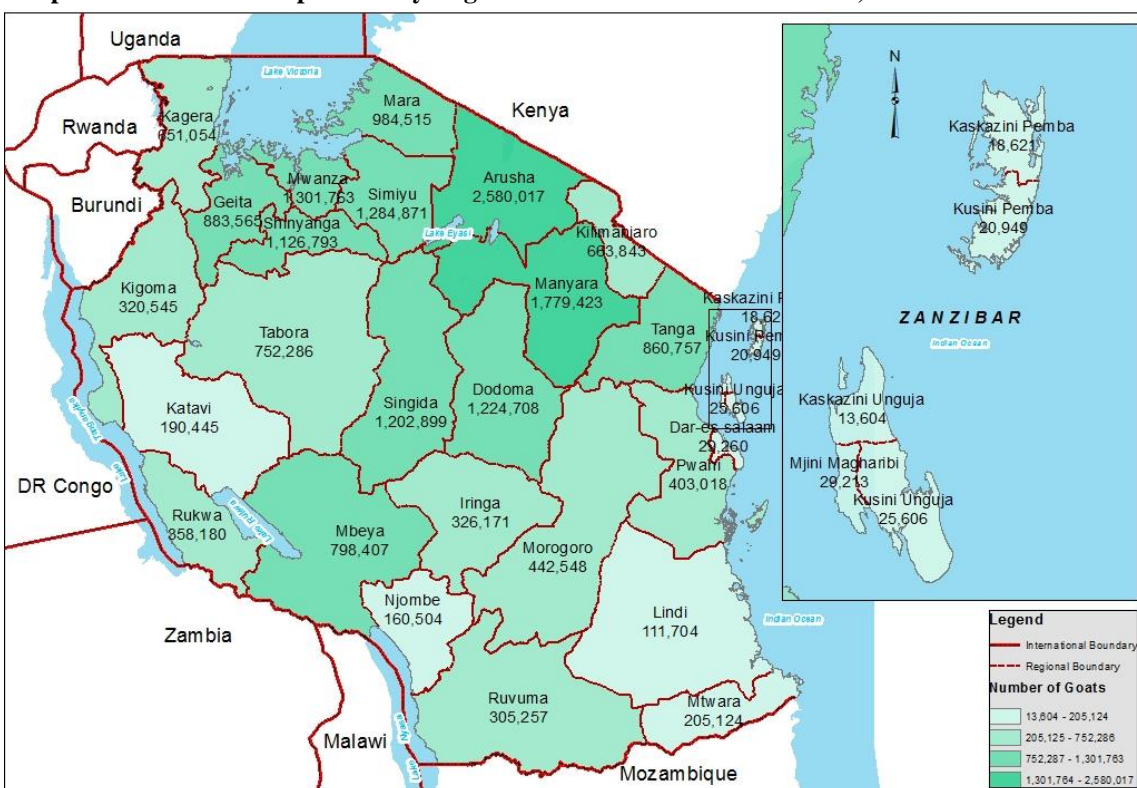

4.2 Goat

Goat ranks the second in livestock population after cattle in both Tanzania Mainland and Zanzibar. The number of operators in Tanzania engaged in goat keeping was 2,789,167 of whom 2,746,230 operators (98.5 percent) were in Tanzania Mainland and 42,937 (1.5 percent) in Zanzibar. Total number of goats in Tanzania was 19,055,651 heads of which 18,947,657 (99.4 percent) were in Tanzania Mainland and 107,993 (0.6 percent) in Zanzibar.

In Mainland Arusha Region with 2,580,017 heads (13.6 percent) had the highest number of goats, followed by Manyara (1,779,423 heads; 9.4 percent) and Mwanza (1,301,763 heads; 6.9 percent). DaresSalaam Region (29,260 heads; 0.2 percent) had the lowest number. In Zanzibar, the highest number of goats was reported in Mjini Magharibi with 29,213 heads (27.1 percent) followed by Kusini Unguja (25,606; 23.7 percent). The region with the lowest number of goats was Kaskazini Unguja (13,604 heads; 12.6 percent).

Map 4.2: Goat Population by Regions in Tanzania as of 1st October, 2017

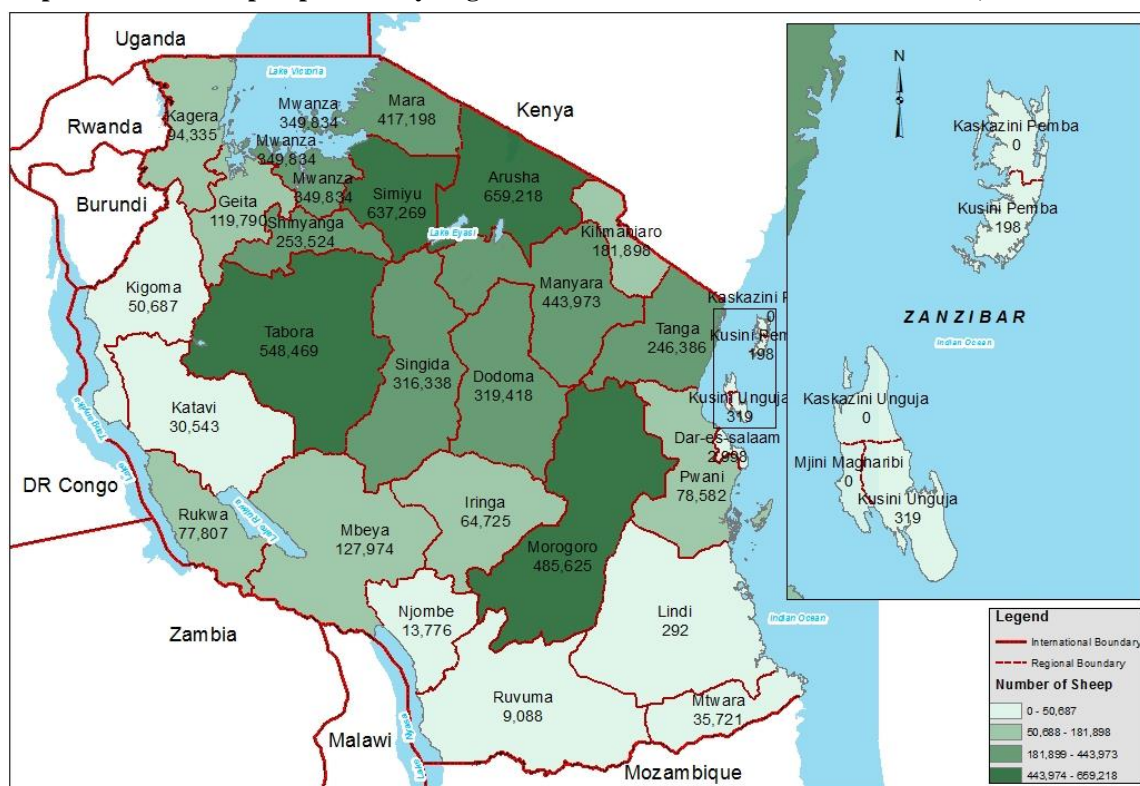

4.3 Sheep

Sheep is the third livestock type in terms of population after cattle and goat in both Tanzania Mainland and Zanzibar. A total of 1,070,902 operators were engaged in sheep keeping of whom 1,070,756 (99.99 percent) were in Tanzania Mainland and 42,937 (0.01 percent) in Zanzibar.

The total number of sheep in Tanzania was 5,565,986 of which 5,565,468 (99.9 percent) were in Tanzania Mainland and 517 (0.01 percent) in Zanzibar. In Tanzania Mainland, Arusha Region with 659,218 sheep (11.8 percent) had the highest number of sheep, followed by Simiyu (637,269; 11.5 percent) and Tabora (548,469; 9.9 percent). Lindi Region (292; 0.01 percent) had the lowest number of sheep. In Zanzibar, only two regions keep sheep; Kusini Unguja Region with 319 sheep (61.7 percent) and Kusini Pemba (198; 38.3 percent).

Map 4.3: Sheep Population by Regions in Tanzania Mainland as of 1st October, 2017

4.4 Pigs

The total number of 451,449 operators were engaged in pig rearing in Tanzania of whom 449,320 operators (99.5 percent) were in Tanzania Mainland and 2,129 (0.5 percent) in Zanzibar. The total number of pigs in Tanzania was 1,998,040 of which 1,952,801 (97.7 percent) were in Tanzania Mainland and 45,240 (2.3 percent) were in Zanzibar. In Tanzania Mainland Mbeya Region (713,063; 36 percent) had the highest number of pigs, followed by Tabora (117,178; 6 percent) and Ruvuma (116,689; 5.9 percent). while Lindi Region with 620 (0.03 percent) had the lowest number. In Zanzibar Kusini Unguja was the only region captured practicing pig rearing with 45,240 pigs.

Figure 4.5: Distribution of Pigs by Category in Tanzania Mainland, 2016/17 AASS

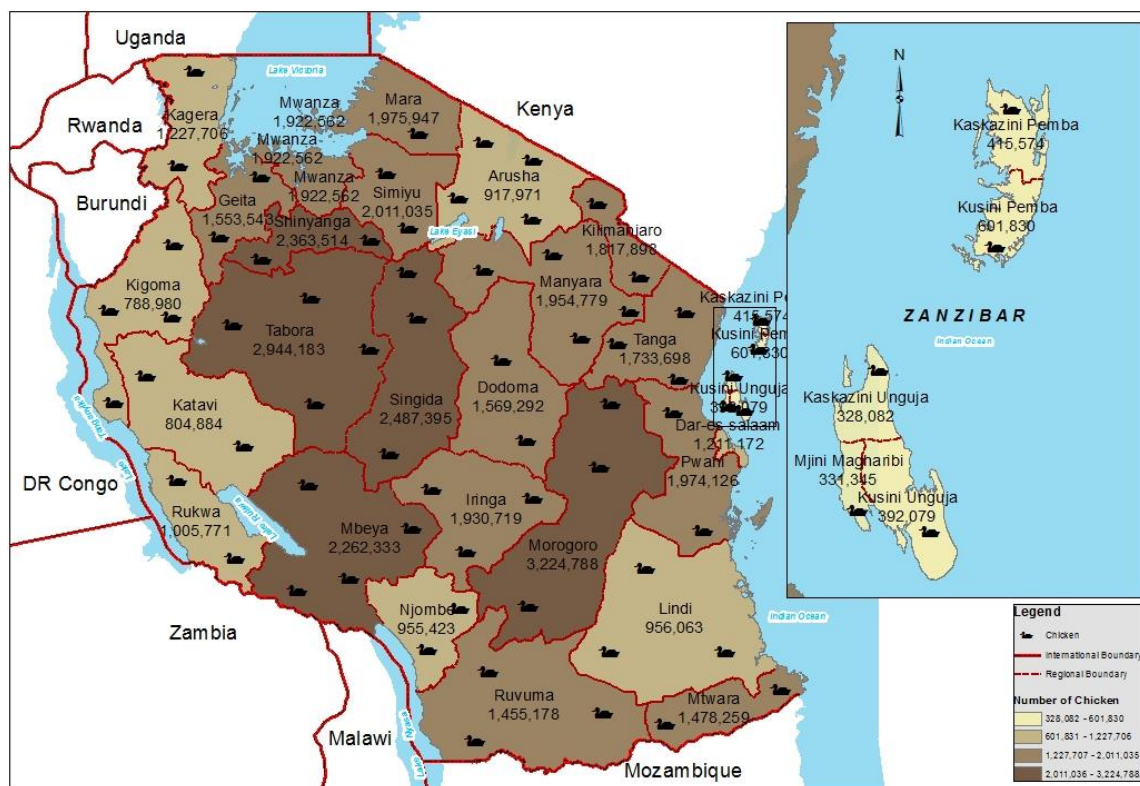

Figure 4.6: Pig Population by Region, Tanzania Mainland as of 1st October, 2017

4.5 Chicken

In Tanzania number of indigenous chicken was 40,349,893 of which 38,595,106 (96 percent) were in Tanzania Mainland and 1,754,786 (4 percent) in Zanzibar. Tabora Region with 2,829,024 birds (7.3 percent) had the highest number of indigenous chicken, followed by Shinyanga (2,332,826; 6.0 percent) and Singida (2,184,743; 5.7 percent). In Zanzibar, Kusini Pemba Region (590,498 birds 33.7 percent) had the highest number, followed by Kaskazini Pemba (415,574; 23.7 percent) and Kusini Unguja (358,93; 20.5 percent).

Map 4.4: Population of Indigenous Chicken by Region in Tanzania as of 1st October, 2017

4.6 Other Livestock

Other livestock captured during the survey included ducks, guinea pigs, turkeys, rabbits and donkeys. Compared to other types of livestock, ducks had the highest number (1,934,131) followed by donkey (580,238) and guinea pigs (565,278) (Table 4.1).

Table 4.1: Number of Other Livestock by Region and Type of Livestock as of 1st October 2017

Region	Ducks	Guinea Pigs	Turkey	Rabbits	Donkey	Dogs

QUESTIONNAIRE

United Republic of Tanzania

CONFIDENTIAL

ANNUAL AGRICULTURE SAMPLE SURVEY 2016/2017

(This information is collected under the Act of the National Bureau of Statistics (Act No. 9 of 2015))

THIS INFORMATION IS STRICTLY CONFIDENTIAL AND IS TO BE USED FOR STATISTICAL PURPOSES ONLY

Ministry of Agriculture, Livestock and Fisheries; Ministry of Agriculture and Natural Resources, Zanzibar; Ministry of Livestock and Fisheries, Zanzibar; President's Office, Regional Administration and Local Governments; Ministry of Industry, Trade and Investment; National Bureau of Statistics; and the Office of the Chief Government Statistician, Zanzibar.

SECTION A: IDENTIFICATION BLOCK

Sample Point ID

Y(S)

--	--	--	--	--	--	--	--

X(E)

--	--	--	--	--	--	--	--

CODE

1. REGION

--	--

2. DISTRICT

--	--

3. WARD/SHEHIA

--	--	--

4. VILLAGE/STREET

--	--

5. ENUMERATION AREA

--	--	--

6. STRATA

--	--	--

7. SAMPLE POINT

--	--	--	--

8. NAME OF LOCAL LEADER/SHEHIA

9. RESULTS OF INTERVIEW:

Complete interview.....1

Refusal and break off2

Point is not accessible.....3

Operator is not accessible.....4

Unknown farm operations5

--

IF CODE 2-5 GIVE COMMENTS AND COMPLETE SECTION 1:

--

SECTION 1: POINT DETAILS

1.1 Is the land on which this point falls part of a farming operation (a farm) or farmer's residence? [**Choose One answer**]

- 1 Yes [Skip to section 2]
- 2 No [Go to question 1.2]
- 3 Point is not accessible [**Explain, then skip to Section 10.**]

☐

1.2 Point did not find a farm: What is the land-use at this point? [**Choose One answer.**]

- 1 Public Road
 - 2 Railroad
 - 3 Central business district, including worship and commercial premises
 - 4 Formal residential area (make sure it is not a farmer's residence)
 - 5 Informal residential area (make sure it is not a farmer's residence)
 - 6 Ocean, river, stream, lake, dam or pond
 - 7 Game, natural or forest reserve
 - 8 Mining operation
 - 9 Other [Specify]
- [Skip to Section 10.]

☐

SECTION 2: FARM OPERATOR DETAILS

[Find and interview the day-to-day decision-maker OR person knowledgeable for this farming operation.]

- 2.1 Do you make or are you knowledgeable of the day-to-day decisions regarding the land on which this point falls? [**Choose One answer**]

Yes 1
No 2

☐

- 2.2 Who is the respondent? [**Choose One answer.**]

Farmer/decision-maker 1
Spouse of farmer/decision-maker 2
Accountant/bookkeeper 3
Permanent Farm worker 4
Other knowledgeable person 5

☐

- 2.3 What are your (the farm operator's) contact details?

Operation name:
Operator name:
Sex of Operator: Male1 Female2
Postal Address:
Telephone:
E-mail:
Fax:

☐

- 2.4 Type of Agricultural Operation

Crop Only 1
Livestock only 2
Crops and Livestock 3

☐

- 2.5 Is this farm registered/certificate of ownership? (a land on which this pointfalls)

Yes 1
No 2

☐

3.1 SECTION 3.0: FARM AREA

What is the land-use at the point? [Tick all that apply.]

<input type="checkbox"/>	Maize	<input type="checkbox"/>	Cattle
<input type="checkbox"/>	Paddy	<input type="checkbox"/>	Goat
<input type="checkbox"/>	Wheat	<input type="checkbox"/>	Sheep
<input type="checkbox"/>	Sorghum	<input type="checkbox"/>	Chicken
<input type="checkbox"/>	Bulrush Millet	<input type="checkbox"/>	Grazing Land
<input type="checkbox"/>	Finger Millet	<input type="checkbox"/>	Fallow Land
<input type="checkbox"/>	Beans		
<input type="checkbox"/>	Fresh Cassava		
<input type="checkbox"/>	Irish Potato		
<input type="checkbox"/>	Sweet Potato		
<input type="checkbox"/>	Banana		
<input type="checkbox"/>	Cotton		
<input type="checkbox"/>	Other crop: [Specify: _____]		
<input type="checkbox"/>	Other Land use: [Specify: _____]		

3.2 In this plot where the **point** fell, how many acres have been planted with the crop(s), used for raising Livestocks or other land use as indicated in Question 3.1?

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------	----------------------	----------------------

Now I would like to ask about the total area of this farming operation, As of the last Agriculture year (1 October 2016 - 30 September 2017),

3.3 a) How many acres did this farming operation:

i) Own

ii) Rented from others

iii) Rented to others

3.3 b) [Calculate Items 3.3a (i) + 3.3a (ii) - 3.3a(iii), write the answer below.]

So the total area of this farming operation was:

--	--	--	--	--	--

3.3 c) Does the total in question 3.3b include land under farm structures, cropland, fallow land, pasture, wasteland, dams, etc.?

Yes1 [Continue.]

No2 [Make corrections to 3.3a (i), 3.3a (ii), and/or 3.3a (iii), then continue.]

--

3.3 d) How was this answer obtained? [Tick one.]

1 Reported by respondent

2 Estimated by respondent

3 Respondent does not know and cannot estimate

--

3.4 What is the total number of Fields operated for crops/Livestock?

NUMBER

--	--

Draw a sketch of the farming operation, showing the approximate location of all Fields planted for harvest during the October 1, 2016 through September 30, 2017 production season.

Record area of each Field

Assign field #1 to the largest field, assign field #2 to the next largest field, until all field are assigned a number.

Note the crop(s) planted in each field.

SECTION 4: CROPS DURING SHORT (VULI) RAINY SEASON OF 2016/17 AGRICULTURE YEAR

4.1 Did you cultivate crops during the shorty (vuli) rainy season?

Yes.....1 [Continue]

No.....2 [Skip to Section 5]

1

[illegible]

[illegible]

SECTION 7: COST OF PRODUCTION

7.1 Short rainy season

Did the farm operator purchase any inputs for use during the 2016/17 short rainy season?

Yes.....1 [Continue]

No.....2 [If no go to question 7.2]

☐

	Inputs	Cost	Voucher Used/Subsidies
		(tsh)	Yes (1) No (2)
	(1)	(2)	(3)
7.1.1	Seeds		
7.1.2	Fertilizer		<input type="checkbox"/>
7.1.3	Insecticide		
7.1.4	Fungicide		
7.1.5	Herbicide		
	Grand Total		

7.2 Long rainy season

Did the farm operator purchase any inputs for use during the 2016/17 long rainy season?

Yes.....1 [Continue]

No.....2 [If no go to question 8]

☐

	Inputs	Cost	Voucher Used/Subsidies
		(tsh)	Yes (1) No (2)
	(1)	(2)	(3)
7.1.1	Seeds		
7.1.2	Fertilizer		<input type="checkbox"/>
7.1.3	Insecticide		
7.1.4	Fungicide		
7.1.5	Herbicide		
	Grand Total		

7.2 Permanent Crops

Did the farm operator purchase any inputs for use during the 2016/17 crop year?

Yes.....1 [Continue]

No.....2 [If no go to question 8]

☐

	Inputs (1)	Cost	Voucher Used/Subsidies
		(tsh)	Yes (1) No (2)
		(2)	(3)
7.1.1	Seeds		
7.1.2	Fertilizer		<input type="checkbox"/>
7.1.3	Insecticide		
7.1.4	Fungicide		
7.1.5	Herbicide		
	Grand Total		

SECTION 8: LIVESTOCK

8.1 CATTLE

Did the farm operator own, raise or manage any **CATTLE** during the last 12 month?

Yes.....1 [Continue]

No.....2 [If no go to question 8.3]

☐

Cattle Population as of 1st October 2017

	Cattle type	Number of Indigenous	Number of Improved		Total
			Beef	Dairy	
	(1)	(2)	(3)	(4)	(5)
8.1.1	Castrated Bulls (Oxen)				
8.1.2	Uncastrated Bulls				
8.1.3	Cows				
8.1.4	Steers				
8.1.5	Heifers				
8.1.6	Male Calves				
8.1.7	Female Calves				
Grand Total					

8.2 MILK PRODUCTION

Did the farm operator produce any milk during the last 12 months?

Yes.....1 [Continue]

No.....2 [If no go to question 8.3]

☐

		Cattle type	Number of milked cows	Average milk production per cow per day (Litres)	Average number of days for cows were milked	Average price per litre (Tshs)
	(1)	(2)	(3)	(4)	(5)	(6)
8.2.1	Wet Season	Improved Diary				
8.2.2		Indigenous				
8.2.3	Dry Season	Improved Diary				
8.2.4		Indigenous				

8.3 GOAT

Did the farm operators own, raise or manage any **GOATS**

Yes.....1 [Continue]

No.....2 [If no go to question 8.5]

☐

Goat Population as of 1st October 2017

	Goat type	Number of Indigenous	Number of Improved		Total
			For meat	Dairy	
	(1)	(2)	(3)	(4)	(5)
8.3.1	Billy Goat				
8.3.2	Castrated Goat				
8.3.3	She Goat				
8.3.4	Male Kid				
8.3.5	She Kid				
Grand Total					

8.4 MILK PRODUCTION

Did the farm operator produce any milk during the last 12 months?

Yes.....1 [Continue]

No.....2 [If no go to question 8.5]

☐

	Season	Number of milked goats	Average milk production per cow per day (Litres)	Average number of days for goats on milked	Average price per litre (Tshs)
	(1)	(2)	(3)	(4)	(5)
8.4.1	Wet Season				
8.4.2	Dry Season				

Sheep Population as of 1st October 2017

8.5 SHEEP

Did the farm operator own, raise or manage any **SHEEP** during the last 12 months?

Yes.....1 [Continue]

No.....2 [If no go to question 8.6]

☐

Pig Population as of 1st October 2017

8.6 PIG

Did the farm operator, raise or manage any **PIGS** during the last 12 months?

Yes.....1

No.....2

☐

	Sheep type	Number of Indigenous	Number of Improved		Total		Pig type	Total
	(1)	(2)	For Mutton	Dairy	(5)		(1)	(2)
8.5.1	Ram					8.6.1	Boar	
8.5.2	Castrated Sheep					8.6.2	Castrated male	
8.5.3	She Sheep					8.6.3	Sow/Gilt	
8.5.4	Male lamb					8.6.4	Male piglet	
8.5.5	She lamb					8.6.5	She piglet	
Grand Total						Grand Total		

8.7 OTHER LIVESTOCK

Did the farm operator own, raise or manage any **OTHER LIVESTOCK** during the last 12 months

Yes.....1

[Continue]

☐

No.....2

[If no go to Section 9]

8.6 PIG

Did the farm operator, raise or manage any **PIGS** during the last 12 months?

Yes.....1

☐

No.....2

Number as of 1 st October 2017

	Animal type	Total	Number of eggs during the last 12 months		Animal type	Total
	(1)	(2)	(3)		(1)	(2)
8.5. 1	Indigenous Chicken			8.6.1	Turkeys	
8.5. 2	Layer			8.6.2	Rabbits	
8.5. 3	Broiler			8.6.3	Donkeys	
8.5. 4	Ducks			8.6.4	Horses	
8.5. 5	Guinea pigs			8.6.5	Dogs	
	Grand Total				Grand Total	

SECTION 9: FISH FARMING

9.1 Was fish farming carried out by this farm operation during the 2016/2017 agricultural year (1 Oct 2016 - 30 Sep 2017)?

Yes.....1 [Continue]

No.....2 [If no go to Section 10]

☐

9.2 Specify details of **fish farming** practices

Production unit Number	Fish farming system	Size of unit/ pond (m ²)	Source of fingerling	Frequency of stocking (No./ Year)	Number of Stocked Fish		Number of fish harvested	Weight of fish (Kg)		
					Type of Fish	Number of Fish raised		Weight of fish harvested	Weight of fish sold	Price per Kg
(Col 1)	(Col 2)	(Col 3)	(Col 4)	(Col 5)	(Col 6)	(Col 7)	(Col 8)	(Col 9)	(Col 10)	(Col 11)
