**TABLE OF CONTENTS**

Table of Contents .....	i
Abbreviations .....	v
Preface .....	vi
Executive Summary .....	vii
Illustrations .....	xv
<b>1 BACKGROUND INFORMATION.....</b>	<b>1</b>
<b>1.1 Introduction.....</b>	<b>1</b>
<b>1.2 Geographical Location and Boundaries.....</b>	<b>1</b>
<b>1.3 Land Area.....</b>	<b>1</b>
<b>1.4 Climate.....</b>	<b>1</b>
1.4.1 Temperature.....	1
1.4.2 Rainfall .....	1
<b>1.5 Administrative Setup.....</b>	<b>1</b>
<b>1.6 Population.....</b>	<b>1</b>
<b>1.7 Socio - Economic Indicators.....</b>	<b>1</b>
<b>2 INTRODUCTION .....</b>	<b>3</b>
<b>2.1 The Rationale for Conducting the National Sample Census of Agriculture.....</b>	<b>3</b>
<b>2.2 Census Objectives .....</b>	<b>3</b>
<b>2.3 Census Coverage and Scope.....</b>	<b>4</b>
<b>2.4 Legal Authority of the National Sample Census of Agriculture.....</b>	<b>5</b>
<b>2.5 Reference Period.....</b>	<b>5</b>
<b>2.6 Census Methodology.....</b>	<b>5</b>
2.6.1 Census Organization.....	6
2.6.2 Tabulation Plan.....	6
2.6.3 Sample Design.....	6
2.6.4 Questionnaire Design and Other Census Instruments.....	7
2.6.5 Field Pre-Testing of the Census Instruments .....	7
2.6.6 Training of Trainers, Supervisors and Enumerators .....	7
2.6.7 Information, Education and Communication (IEC) Campaign .....	7
2.6.8 Household Listing.....	8
2.6.9 Data Collection.....	8
2.6.10 Field Supervision and Consistency Checks .....	8
2.6.11 Data Processing .....	8
- Manual Editing .....	9
- Data Entry .....	9
- Data Structure Formatting.....	9
- Batch Validation .....	9
- Tabulations .....	9
- Analysis and Report Preparation.....	9
- Data Quality.....	10
<b>2.7 Funding Arrangements .....</b>	<b>10</b>
<b>3 CENSUS RESULTS AND ANALYSIS.....</b>	<b>11</b>
<b>3.1 Holding Characteristics.....</b>	<b>11</b>
3.1.1 Type of Holdings.....	11
3.1.2 Livelihood Activities/Source of Income.....	11
3.1.3 Sex and Age of Heads of Households .....	15
3.1.4 Number and Age of Household Members.....	15
3.1.5 Level of Education.....	15
- Literacy.....	15
- Literacy Level for Household Members .....	15
- Literacy Rates for Heads of Households.....	16
- Educational Status.....	16

3.1.6	Off-farm Income.....	17
<b>3.2</b>	<b>Land Use .....</b>	<b>17</b>
3.2.1	Area of Land Utilised .....	18
3.2.2	Types of Land Use.....	18
<b>3.3</b>	<b>Annual Crops and Vegetable Production .....</b>	<b>19</b>
3.3.1	Planted Area .....	19
3.3.2	Crop Importance.....	22
3.3.3	Crop Types .....	22
3.3.4	Cereal Crop Production .....	23
3.3.4.1	Maize .....	23
3.3.4.2	Sorghum.....	24
3.3.4.3	Other Cereals.....	27
3.3.5	Roots and Tuber Crops Production.....	27
3.3.5.1	Cassava .....	28
3.3.5.2	Sweet potatoes .....	30
3.3.6	Pulse Crops Production .....	30
3.3.6.1	Beans .....	31
3.3.7	Oil Seed Production.....	33
3.3.7.1	Groundnuts .....	34
3.3.8	Fruits and Vegetables .....	34
3.3.8.1	Tomatoes .....	36
3.3.8.2	Cabbages.....	37
3.3.8.3	Onions.....	37
3.3.9	Other Annual Crop Production.....	37
3.3.9.1	Cotton .....	41
3.3.9.2	Tobacco .....	41
<b>3.4</b>	<b>Permanent Crops.....</b>	<b>41</b>
3.4.1	Banana .....	44
3.4.2	Coffee .....	49
3.4.3	Mango .....	49
3.4.4	Oranges .....	49
<b>3.5</b>	<b>Inputs/Implements Use.....</b>	<b>50</b>
3.5.1	Methods of Land Clearing.....	50
3.5.2	Methods of Soil Preparation.....	50
3.5.3	Improved Seeds Use.....	51
3.5.4	Fertilizers Use.....	51
-	Farm Yard Manure Use.....	52
-	Inorganic Fertilizer Use.....	53
-	Compost Use .....	54
3.5.5	Pesticides Use.....	55
-	Insecticides Use.....	55
-	Herbicides Use .....	56
-	Fungicides Use .....	56
3.5.6	Harvesting Methods.....	56
3.5.7	Threshing Methods .....	57
<b>3.6</b>	<b>Irrigation .....</b>	<b>57</b>
3.6.1	Area Planted with Annual Crops and Under Irrigation.....	59
3.6.2	Sources of Water Used for Irrigation.....	59
3.6.3	Methods of Obtaining Water for Irrigation.....	60

3.6.4	Methods of Water Application .....	60
<b>3.7</b>	<b>Crop Storage, Processing and Marketing.....</b>	<b>60</b>
3.7.1	Crop Storage.....	60
	- Methods of Storage.....	61
	- Duration of Storage .....	61
	- Purposes of Storage.....	62
	- The Magnitude of Storage Loss.....	62
3.7.2	Agro processing and By-products .....	63
	- Processing Methods.....	63
	- Main Agro-processing Products .....	64
	- Main Use of Primary Processed Products .....	64
	- Outlet for Sale of Processed Products .....	65
3.7.3	Crop Marketing .....	65
	- Main Marketing Problems.....	67
	- Reasons for Not Selling Crops .....	67
<b>3.8</b>	<b>Access to Crop Production Services.....</b>	<b>67</b>
3.8.1	Access to Agricultural Credits.....	67
	- Source of Agricultural Credits.....	67
	- Use of Agricultural Credits.....	68
	- Reasons for not Using Agricultural Credits.....	68
3.8.2	Crop Extension .....	68
	- Sources of Crop Extension Messages.....	69
	- Quality of Extension.....	69
<b>3.9</b>	<b>Access to Inputs .....</b>	<b>69</b>
3.9.2	Inorganic Fertilisers .....	70
3.9.3	Improved Seeds .....	70
3.9.4	Insecticides and Fungicides .....	71
<b>3.10</b>	<b>Tree Planting.....</b>	<b>71</b>
<b>3.11</b>	<b>Irrigation and Erosion Control Facilities .....</b>	<b>74</b>

**PREFACE**

At the end of the 2002/03 Agriculture Year, the National Bureau of Statistics and the Office of the Chief Government Statistician in Zanzibar in collaboration with the Ministries of Agriculture and Food Security; Water and Livestock Development; Cooperatives and Marketing as well as the Presidents Office, Regional Administration and Local Government (PORALG) conducted the Agriculture Sample Census. This is the third Agriculture Census to be carried out in Tanzania, the first one was conducted in 1971/72, the second in 1993/94 and 1994/95 (during 1993/94 data on household characteristics and livestock count were collected and data on crop area and production in 1994/95).

It is considered that this census is one of the largest to be carried out in Africa and indeed in many other countries of the world. The census collected detailed data on crop production, crop marketing, crop storage, livestock production, fish farming, tree farming, access to infrastructures and services and poverty indicators.

In addition to this, the census was large in its coverage as it provides data that can be disaggregated at district level and thus allow comparisons with the 1998/99 District Integrated Agricultural Survey. The census covered smallholders in rural areas only and large scale farms. This report presents Dodoma region data disaggregated to district level. It was very difficult to discuss all variables collected in a single report hence the analysis was based on the most important smallholder variables. The rest of the variables are found in the e attached annex of table of results. The analysis in the report includes time series comparisons using data from the previous censuses and surveys.

The extensive nature of the census in relation to its scope and coverage is a result of the increasing demand for more detailed information to assist in the proper planning of this sector and in the administrative decentralization of planning to district level. It is hoped that this report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by crop producers and livestock keepers in the country.

On behalf of the Government of Tanzania, I wish to express my appreciation for the financial support provided by the development partners, in particular, the European Union as well as DFID, UNDP, Japanese Government, JICA and others who contributed through the pool fund mechanism.

Finally, my appreciation goes to all those who in one-way or the other contributed to the success of the survey. In particular, I would also like to mention the enormous effort made by the Planning Group composed of professionals from the Agriculture Statistics Department of the National Bureau of Statistics (NBS), the Office of the Chief Government Statistician in Zanzibar (OCGS) and the Statistics Unit of the Ministry of Agriculture and Food Security (MAFS) with technical assistance provided by Ultec Lawrence Gould (ULG), Scotts Agriculture Consultancy Ltd and the Food and Agriculture Organisation of the United Nations (FAO).

Additionally, I would like to extend my appreciation to all professional staff of the National Bureau of Statistics, the sector Ministries of Agriculture and PORALG, the Consultants as well as Regional and District Supervisors and field enumerators for their commendable work. Certainly without their dedication, the census would not have been such a success.

Cletus P. B. Mkai  
**The Director General**  
**National Bureau of Statistics**

---

## EXECUTIVE SUMMARY

The executive summary highlights the main census results obtained during the National Sample Census of Agriculture 2002/03. This report covers small-scale agriculture households which were selected using statistical sampling techniques in rural areas of Mara region. The results in the report do not cover urban areas and large-scale farmers.

The highlights describe the important findings in relation to agricultural production, productivity, husbandry, access to resources, levels of involvement in agricultural related activities and poverty in Mara region. It provides an overview of the rural agricultural households and their levels of involvement in agricultural related activities at regional level.

### I. Household Characteristics

The number of agricultural households in Mara region was 188,203, of which 103,379 (54.9%) were involved in growing crops only, 2,412 (1.3%) were involved in livestock keeping only and 82,412 (43.8%) were involved in both crop production and livestock keeping.

Most of the agricultural households ranked annual crop farming as an activity that provided most of their cash income, followed by tree/forest resources, permanent crop farming, off farm income, livestock keeping/herding, remittances and fishing/hunting & gathering.

Mara region had a total literacy rate of 72 percent. The highest literacy rate was found in Musoma Urban (81%), followed by Tarime and Musoma Rural districts (74% each). Serengeti and Bunda districts had the lowest literacy rates of 69 percent each. The literacy rate for the heads of households in the region was 73.5 percent.

The number of heads of agricultural households with formal education in Mara region was 135,160 (71.8%), those without any education were 50,764 (27.0%) and those with only adult education were 2,280 (1.2%). The majority of heads of agricultural households had primary level education (66.2%), whereas only 5.6 percent had post primary education.

In Mara region 72,002 households (38%) had only one member aged 5 and above involved in off-farm income generating activity, 25,816 households (14%) had two members involved in off-farm income generating activities and 11,969 households (6%) had more than two members involved in off-farm income generating activities.

### II. Crop Production

#### ▪ Land Area

The total area of land available to smallholders was 487,543 ha. The regional average land area utilised for agriculture per household was only 1.9 ha. This figure is close to the national average which is 2.0 hectares.

#### ▪ Planted Area

The area planted with annual crops and vegetables was 333,525 hectares, of which 120,270 hectares (36%) were planted during the short rainy season and 213,255 hectares (64%) during the long rainy season.

The area planted with cereals was 161,701 ha (48.5% of the total planted area with annual and vegetable crops), followed by roots and tubers with 133,117 ha (39.9%), annual cash crops (20,587 ha, 6.2%), pulses (14,438 ha, 4.3%), fruit and vegetables (2,110 ha, 0.6%) and oil seeds (1,572 ha, 0.5%).

### **i) Cereal Crops**

#### **▪ Maize**

Maize was the most important cereal crop in Mara region, however it had the second largest planted area after cassava. The number of households growing maize in Mara region during the long rainy season was 77,336 (62% of the total crop growing households in the region during the long rainy season). The total production of maize was 110,662 tonnes from a planted area of 91,804 hectares resulting in a yield of 1.2 t/ha.

There was a sharp drop in maize production from 106,000 tonnes in 1995 to 66,000 tonnes in 1996. This was followed by a gradual increase to 107,000 tonnes in 1999 after which the production remained more or less constant up to the year 2003. The average planted area with maize per household was 0.6 hectares, however it ranged from 0.33 hectares in Musoma Urban district to 0.65 hectares in Bunda district. Tarime district had the largest area of maize (39,273 ha), followed by Musoma Rural (19,326 ha), Serengeti (17,490 ha), Bunda (15,668 ha) and Musoma Urban (47 ha).

#### **▪ Sorghum**

Sorghum was the second most important cereal crop in the region in terms of planted area. The number of households that planted sorghum in Mara region during the long rainy season was 54,589. This represents 43.7 percent of the total crop growing households in Mara region in the long rainy season. The total production of sorghum was 54,506 tonnes from a planted area of 55,040 hectares resulting in a yield of 0.99 t/ha. The district with the largest area planted with sorghum was Tarime (22,060 ha), followed by Serengeti (17,040 ha), Bunda (10,188 ha), Musoma Rural (5,751 ha) and Musoma Urban (1 ha).

### **ii) Roots and Tubers**

The total production of roots and tubers was 161,111 tonnes. Of all roots and tubers, cassava production was the most important with a total production of 115,747 tonnes representing 71.8 percent of the total root and tuber crop production. This was followed by sweet potatoes with 43,234 tonnes (26.8%), Irish potatoes (1,781 tonnes, 1.1%), yams (277 tonnes, 0.2%) and cocoyam (71 tonnes 0.0%).

#### **▪ Cassava**

The number of households growing cassava in Mara region during the long rainy season was 138,982. This represents 75.4 percent of the total crop growing households in the region. The total production of cassava during the census year was 115,747 tonnes from a planted area of 115,743 hectares resulting in a yield of 1.0 t/ha.

#### **▪ Sweet Potatoes**

The number of households growing sweet potatoes in Mara region during the long rainy season was 36,514 (19.3% of the total crop growing households in the region). The total production of sweet potatoes during the census year was 43,234 tonnes from a planted area of 16,621 hectares resulting in a yield of 2.6 t/ha.

---

- **Pulse Crops Production**

The total area planted with pulses was 14,438 hectares out of which 11,726 ha were planted with beans (81.2 percent of the total area planted with pulses), followed by chick peas (2,070 ha, 14.3%), cowpeas (278 ha, 1.9%), bambara nuts (256 ha, 1.8%) and mung beans (108 ha, 0.7%).

- iii) **Oil Seed Production**

The total production of oilseed crops was 1,459 tonnes planted on an area of 1,572 hectares. Groundnuts were the most important oilseed crop with 1,338 ha (85.1% of the total area planted with oil seeds), followed by simsim (176 ha, 11.2%), soya beans (38 ha, 2.4%) and sunflower (21 ha, 1.3%).

- iv) **Fruit and Vegetables**

The most cultivated fruit and vegetable crop was the tomato with a production of 3,801 tonnes (54% of the total fruits and vegetables produced), followed by cabbage (1,683t, 24%) and onions (907t, 10%). The production of the other fruit and vegetable crops was relatively small.

- v) **Annual Cash Crops**

An area of 20,587 ha was planted with annual crops, mainly cotton and tobacco. The area planted with annual cash crops in short rainy season was 18,628 ha which represents 15.5 percent of the total area planted with annual crops in short rainy season. The area planted with annual cash crops in long rainy season was 1,959 ha representing 0.9 percent of the total area planted with annual crops during the long rainy season.

- vi) **Permanent Crops**

The area of smallholders planted with permanent crops was 16,835 hectares (5% of the area planted with annual and permanent crops in the region). The most important permanent crop in Mara region was banana with a planted area of 4,376 ha, (27% of the planted area of all permanent crops), followed by coffee (3,771 ha, 22%), mango (1,701 ha, 10%), orange (1,169 ha, 7%), pawpaw (991 ha, 6%) and sugarcane (383 ha, 2%)

### III Inputs/Implement Use

- **Methods of Soil Preparation**

Ox-ploughing was the most common method of soil preparation and it was used on an area of 144,491 ha which represented 66 percent of the total area cultivated, followed by hand hoe cultivation (72,166 ha, 33%) and tractor ploughing (1,822 ha, 1%)

- **Improved Seeds**

The area planted using improved seeds was 50,862 ha which represents 15 percent of the total area planted with the annual crops and vegetables. The use of improved seed in the short rainy season was 27 percent, much higher than the corresponding percentage use for the extended rainy season (9%).

---

- **Use of Fertilizers**

The use of fertilisers on annual crops was very small with a planted area of only 57,423 ha (17.2% of the total planted area in the region). Of the planted area with fertiliser application, farm yard manure was applied on 47,972 ha which represents 14 percent of the total planted area (83.5% of the area planted with fertiliser application in the region). This was followed by compost (6,719 ha, 2%). Inorganic fertilizers were used on a very small area which represented only 4.7 percent of the area planted with fertilizers.

- **Pesticide Use**

Insecticides were the most common pesticides used in the region (62% of the total area applied with pesticides). This was followed by fungicides (27%) and herbicides (11.3%). The planted area applied with insecticides was estimated at 21,719 ha which represented 6.5 percent of the total planted area for annual crops and vegetables, followed by fungicides (9,482 ha, 23%) and herbicides (5,011 ha, 12%).

- **Irrigation**

In Mara region, the area of annual crops under irrigation was 4,202 ha representing 1.3 percent of the total area planted. The area under irrigation during the short rainy season was 2,412 ha accounting for 57 percent of the total area under irrigation. Some crops, especially vegetables, were predominantly grown during the long rainy season with irrigation. In the long rainy season, 71 percent of the area planted with vegetables was irrigated, whilst 59 percent of the vegetables were irrigated in the short rainy season.

#### **IV. Crop Storage, Processing and Marketing**

- **Crop Storage**

There were 135,725 crop growing households (73% of the total crop growing households) that stored various agricultural products in the region.

The most important stored crop was maize with 102,693 households storing 11,353 tonnes as of 1<sup>st</sup> October 2003. This was followed by Sorghum and millet (78,632 households, 9,567t), beans and pulses (29,539 households, 961t), paddy (7,785 households, 697t) and groundnuts/bambara nuts (2,071 households, 87t). Other crops were stored in very small amounts. The most common method of storage in the region was in locally made traditional structures.

- **Agro - processing**

Agro-processing was practiced by most crop growing households in Mara region (171,860 households, 91.3% of the total crop growing households). With exception of Musoma Urban district, the percent of households processing crops in the rest of the districts was very high (above 80%). Musoma Urban had the lowest percent of households processing crops (62% of crop growing households).

Most crop processing households processed their crops using neighbour's machines (67%, 115,059 households). This was followed by those processing on-farm by hand (42,052 households, 24.5%), on farm by machine (12,461 households, 7%) and by trader (1,918 households, 1%). The remaining methods of processing were used by very few households (less than 1%).

---

### ▪ **Crop Marketing**

The number of households that reported selling crops in Mara region was 130,438 which represented 70.2 percent of the total number of crop growing households. The percent of crop growing households selling crops was highest in Serengeti (77.3%), followed by Musoma Rural (69.5%), Tarime (69.1%), Bunda (67.7%) and Musoma Urban (21.9%).

## **V. Access to Crop Production Services**

### ▪ **Access to Agricultural Credit**

In Mara region, very few agricultural households (675, 0.4%) accessed credit, out of which 419 (75%) were male-headed households and 256 (38%) were female headed households. In Musoma Rural district, only female headed households got agricultural credit whereas in Serengeti both male and female headed households accessed agricultural credits.

### ▪ **Crop Extension Services**

The number of agricultural households that received crop extension was 62,800 (34% of total crop growing households in the region). Some districts had more access to extension services than others, with Bunda having a relatively high proportion of households (60%) that received crop extension messages, followed by Musoma Rural (47%), Musoma Urban (25%), Serengeti (23%) and Tarime (18%). The main source of crop extension advice was from the Government.

### ▪ **Access to Inputs**

In Mara region farm yard manure was used by 48,514 households which represented 26.1 percent of the total number of crop growing households. This was followed by improved seeds (22.9%), insecticide/fungicide (11.6%), compost (3.6%), inorganic fertiliser (1.6%) and herbicide (0.1%).

The percent of households that use improved seeds was 22.9 percent of the total number of crop growing households. The district that used improved seeds most was Bunda with 36.7 percent of the total number of crop growing households using improved seeds in the district, followed by Musoma Urban (26.9%) and Musoma Rural (24.9%). Percentages of the crop growing households in Tarime and Serengeti districts that used improved seeds were 18.4 and 16.5 respectively

## **VI. Tree Planting**

The number of households involved in tree farming was 53,900 representing 29 percent of the total number of agriculture households. The number of trees planted by smallholders on their allotted land was 4,540,084 trees. The average number of trees planted per household that plants trees on their land was 84 trees.

## **VII. Irrigation and Erosion Control Facilities**

The number of agricultural households that had soil erosion and water harvesting facilities on their farms was 18,282 which represented 10 percent of the total number of agricultural households in the region. The proportion of households with soil erosion control and water harvesting facilities was highest in Musoma Rural district (24%), followed by Musoma Urban (21%), Tarime (6%), Serengeti (2%) and Bunda (1%).

## VIII. Livestock Results

### i) Livestock Population

#### ▪ Cattle

The total number of cattle in the region was 1,099,068. Cattle are the dominant livestock type in the region, followed by goats, sheep and pigs. The region had 6.5 percent of the total cattle population on Tanzania Mainland. The number of indigenous cattle in Mara region was 1,090,007 (99.2 % of the total number of cattle in the region). The number of dairy breeds was 8,797 cattle (0.8%) and 264 cattle (0.0%) were beef breeds.

#### ▪ Goats

The number of goat-rearing households in Mara region was 72,575 (39% of all agricultural households in the region) with a total number of 634,044 goats giving an average of 9 heads of goats per goat-rearing household. Tarime district had the largest number of goats (237,710 goats, 37.5% of all goats in the region), followed by Musoma Rural (173,221 goats, 27.3%), Bunda (118,038 goats, 18.6%), Serengeti (103,574 goats, 16.3%) and Musoma Urban (1,501 goats, 0.2%).

#### ▪ Sheep

The number of sheep-rearing households was 21,780 (12% of all agricultural households in Mara region) rearing 194,073 sheep, giving an average of 9 heads of sheep per sheep-rearing household. The district with the largest number of sheep was Tarime with 75,196 sheep (39% of total sheep in Mara region) followed by Serengeti (48,376 sheep, 25%), Musoma Rural (40,362 sheep, 21%) and Bunda (30,078 sheep, 16%).

#### ▪ Pigs

The number of pig-rearing agricultural households in Mara region was 328 (0.2% of the total agricultural households in the region) rearing 2,409 pigs. This gives an average of 7 pigs per pig-rearing household. The district with the largest number of pigs was Tarime with 2,129 pigs (88.4% of the total pig population in the region), followed by Serengeti (279 pigs, 11.6%).

#### ▪ Chicken

The number of households keeping chickens was 141,825 raising about 1,521,166 chickens mostly indigenous chickens. This gives an average of 11 chickens per chicken-rearing household. In terms of total number of chickens in the country, Mara region was ranked eleventh out of the 21 Mainland regions.

### ii) Pests and Parasites Incidences and Control

About 69 percent and 17 percent of the total livestock-keeping households in Mara region reported to have encountered ticks and tsetse fly problems respectively. There was a predominance of tick related diseases over tsetse related diseases. While incidences of tick problems were highest in Musoma Urban district and lowest in Serengeti district, tsetse flies incidences were highest in Serengeti but lowest in Musoma Rural district and no tsetse flies incidences were reported in Musoma Urban district.

Livestock rearing households that de-wormed their animals were 44,155 (52% of the total livestock rearing households in Mara region).

### iii) Access to Livestock Services

The total number of households that received livestock advice was 31,979, representing 38 percent of the total livestock-rearing households and 17 percent of the agricultural households in the region. The main livestock extension agent was the government which provided service to 65.2 percent of all households receiving livestock extension services, followed by NGOs/development projects (12.8%), large scale farmers (8.5%) and cooperatives (7.5%).

Many veterinary clinics were located very far from livestock rearing households. About 80 percent of the livestock rearing households accessed the services, at a distance of more than 14 kms. Only 20 percent of them accessed the services within 14 kms from their dwellings.

The number of livestock rearing households residing less than 5 kms from the nearest watering point was 23,302 (73% of the total livestock rearing households in Mara region), whilst 8,439 households (26%) resided between 5 and 14 kms.

### iv) Animal Contribution to Crop Production

Mara region had the fourth largest proportion of households using draft animals on Tanzania Mainland with 89,548 households (48% of the total agricultural households in the region) using them. The number of households that used draft animals in Tarime district was 49,457 representing 55 percent of the households using draught animals in the region, followed by Serengeti (14,764 households, 16%), Musoma Rural (13,344 households, 15%) and Bunda (11,984 households, 13%). There were no households using draft animals in Musoma Urban district.

#### ▪ Use of Organic Fertiliser

The total area applied with organic fertiliser was 33,009 ha of which 29,792 hectares (90.5% of the total area applied with organic fertilizers or 23.8 percent of the area planted with annual crops and vegetables in Mara region during the long rainy season) was applied with farm yard manure.

## IX. Fish Farming

The number of households involved in fish farming in Mara region was 255, representing 0.1 percent of the total agricultural households in the region. Tarime was the only district in the region practicing fish farming.

## X. Poverty Indicators

### i) Type of Toilets

Most households in Mara region (75.4% of all rural agricultural households) used traditional pit latrines, 1.7 percent used improved pit latrine and 1.7 percent used flush toilets. The remaining 0.2 percent of households had other unspecified types of toilets. However, households with no toilet facilities represented 21.0 percent of the total agriculture households in the region and most of these were found in Tarime district.

### ii) Household Assets

Out of all assets, radios were ownership was most common (57.3% of households), followed by bicycle (50.4%), iron (26.9%), wheelbarrow (5.9%), mobile phones (2.2%), vehicle (0.9%), television/video (0.8%) and landline phones (0.5%).

**iii) Source of Lighting Energy**

Wick lamp was the most common source of lighting energy in Mara region with 63.1 percent of the total rural households using this source of energy followed by hurricane lamp (32.1%), pressure lamp (3.0%), firewood (0.7%), main electricity (0.5%), solar (0.3%), candle (0.2%) and biogas (0.1%).

**iv) Energy for Cooking**

The most common source of energy for cooking was firewood, which was used by 97.3 percent of all rural agricultural households in Mara region. This is followed by charcoal (1.8%) and mains electricity (0.3%). The rest of energy sources (i.e., bottled gas, crop residues, livestock dung, paraffin/kerosene and solar ) accounted for 0.6 percent.

**v) Roofing Materials**

The most common roofing material for the main dwelling was grass and leaves and which was used by 60.4 percent of the rural agricultural households. This is followed by iron sheets (28.7%), grass and mud (9.8%), tiles (0.6%), concrete (0.4%) and asbestos (0.1%).

**vi) Access to Drinking Water**

The main source of drinking water for rural agricultural households in Mara region was unprotected wells (39% of households use unprotected wells during the wet season and 36 percent of the households during the dry seasons). This is followed by surface water (Lake / Dam / River / Stream) (20% of households during wet season and 29% in the dry season) and unprotected springs (16% of households in the wet season and 16% during dry season).

About 50 percent of the rural agricultural households in Mara region obtained drinking water within a distance of less than one kilometer during wet season compared to 32 percent of the households during the dry season.

**vi) Number of Meals per Day**

About 58.4 percent of the holders in the region took two meals per day, 39.2 percent took three meals, 2.0 percent took one meal and 0.3 percent took four meals per day. Serengeti district had the largest percent of households having 3 meals per day

About 69 percent of the agricultural households in Mara region consumed meat during the week preceding the census with 63,808 households (33.9 % of those who consumed meat) consuming it only once during the respective week. This was followed by those who had meat twice during the week (22.2%). Very few households had meat four times or more during the respective week. However, 30.8 percent of the agricultural households in Mara region did not eat meat during the week preceding the census.

Most of the total agricultural households in Mara region (88% of the total agricultural households in the region) consumed fish during the week preceding the census, with 33,998 households (20.1% of those who consumed fish) consuming fish once during the respective week

---

**vii) Food Security**

About 42 percent of the agricultural households in Mara region said they did not experience any food sufficiency problems. The rest 58 percent of the households did experience food sufficiency problems at different levels from severe to mild.

**XI. Main Source of Cash Income**

The main cash income of the households in Mara region was from selling food crops (36.1 percent of smallholder households), followed by other casual cash earnings (13.3%), businesses (11.4%), selling of cash crops (9.6%), and fishing (9.5%). Only 5.9% of smallholder households reported the sale of livestock as their main source of income, followed by cash remittance (4.9%), wages and salaries (4.6%), sale of forest products (2.2%) and sale of livestock products (1.0%).

## **1. BACKGROUND INFORMATION**

### **1.1 Introduction**

This part of the report presents a brief description of the region by providing information on geographical location, land area, climate, administrative set up, population and socio-economic indicators. The information will provide the user with a general understanding of the region and its resources.

### **1.2 Geographical Location and Boundaries**

Mara region is located in the northern part of Mainland Tanzania. The region lies between latitudes 1<sup>0</sup> and 2<sup>0</sup> South and longitudes 31<sup>0</sup>10' and 35<sup>0</sup>15' East. The region is bordered by Kenya to the north, Mwanza and Shinyanga regions to the south, Arusha region to the east and Kagera region to the west.

### **1.3 Land Area**

Mara region occupies a total area of 30,150 square kilometers of which 7,750 sq kms is occupied by Serengeti National Park.

### **1.4 Climate**

#### **1.4.1 Temperature**

The region has a maximum temperature of 29.32<sup>0</sup>c and a minimum temperature of 27.68<sup>0</sup> while the average temperature for this region is 28.5<sup>0</sup>.

#### **1.4.2 Rainfall**

The region has bimodal rainfall pattern with short rainfall period between September and January and long rainfall period between February and June.

### **1.5 Administrative Setup**

Mara region is divided into five administrative districts namely Musoma Rural, Musoma Urban, Bunda, Serengeti and Tarime. The headquarters of the region is located in Musoma Urban.

### **1.6 Population**

According to the 2002 Population and Housing Census, there were 1,368,602 inhabitants in Mara region and an average household size of 5.5 persons. This was about 4 percent of Tanzania Mainland's population. The annual Average Population growth rate (1988 – 2002) was 2.5 percent.

### **1.7 Socio - Economic Indicators**

The regional Gross Domestic Product (GDP) at current prices for the year 2003 was estimated to be TShs. 443,187 million. The region held 7<sup>th</sup> position among regions on GDP and contributed about 4.5 percent to the national GDP<sup>1</sup>

---

<sup>1</sup> National Bureau of Statistics

- 
- There are a number of tourist attractions in the region. These are Serengeti National Park, Game Reserves, Game Controlled areas and Lake Victoria. Serengeti National Park occupies the area of 14,763 sq km of which 7,750 sq km (52.5%) are situated in Mara region.
  - A small part of the population is engaged in fishing activities. This group includes people who live close to the shore of Lake Victoria
  - Also there are some gold mining activities in the region

## **2. INTRODUCTION**

This part of the report provides the technical and operational description of the National Sample Census of Agriculture (NSCA), carried out in the rural areas of Tanzania Mainland and Zanzibar during the 2002/03 agricultural year. It details the background and the rationale for carrying out the NSCA in 2002/03 agricultural year. It also explains the sampling procedures, designing and implementation of the data processing system.

### **2.1 The Rationale for Conducting the National Sample Census of Agriculture**

In 2003, the Government of Tanzania launched the Agricultural Sample Census as an important part of the Poverty Monitoring Master Plan which supports the production of statistics for advocacy of effective public policy, including poverty reduction, access to services, gender, as well as the standard crop production data normally collected in an agriculture census. The census is intended to fill the information gap and support planning and policy formulation by high level decision making bodies. It is also meant to provide critical benchmark data for monitoring Agriculture Sector Development Programme (ASDP) and other agriculture and rural development programs as well as prioritising specific interventions of most agriculture and rural development programs.

Following the decentralisation of the Government's administration and planning functions, there has been a pressing need for agriculture and rural development data disaggregated at regional and district levels. The provision of district level estimates will provide essential baseline information on the state of agriculture and support decision making by the local government authorities in the design of District Agricultural Development and Investment Projects (DADIPS). The increase in investment is an essential element in the national strategy for growth and reduction of poverty.

This report (Volume V) is among the 21 regional reports for the Mainland. Other Census reports include the Technical Report (Volume I), Crop Sector at national and regional levels including Zanzibar estimates (Volume II), Livestock Report (Volume III), Smallholder Household Characteristics and Access to Natural Resources Report (Volume IV), 21 Regional Reports for the Mainland (Volume V), Large Scale Farms Report (Volume VI) and a separate report for Zanzibar (Volume VII). In order to address the specific issue of gender, a separate thematic report on gender has been published. Other thematic reports will be produced depending on the demand and availability of funds. In addition to these reports two dissemination applications have been produced to allow users to create their own tabulations, charts and maps.

The report is divided into five main sections: Background Information, Introduction, Results, Mara profiles (Regional and Districts) and Appendices. The definitions relating to all aspects of this report can be found in the questionnaire (Appendix III).

### **2.2 Census Objectives**

The 2003 Agriculture Sample Census was designed to meet the data needs of a wide range of users down to district level including policy makers at local, regional and national levels, rural development agencies, funding institutions, researchers, non-government organisations (NGOs), farmer organisations, etc. As a result, the dataset is both more numerous in its sample and detailed in its scope compared to previous censuses and surveys. To date this is the most detailed Agricultural Census carried out in Africa. The census was carried out in order to:

- 
- Identify structural changes if any, in the size of farm household holdings, crop and livestock production, farm input and implement use. It also seeks to determine if there are any improvements in rural infrastructure and in the level of agriculture household living conditions;
  - Provide benchmark data on productivity, production and agricultural practices in relation to policies and interventions promoted by the Ministry of Agriculture and Food Security and other stake holders.
  - Establish baseline data for the measurement of the impact of high level objectives of the Agriculture Sector Development Programme (ASDP), National Strategy for Growth and Reduction of Poverty (NSGRP) and other rural development programs and projects.
  - Obtain benchmark data that will be used to address specific issues such as: food security, rural poverty, gender, agro-processing, marketing, service delivery, etc.

### 2.3 Census Coverage and Scope

The census was conducted for both large and small scale farms. The National Sample Census of Agriculture covered a total of 3,221 selected rural villages of Tanzania Mainland out of which 151 villages were from Mara region.

The census covered agriculture in detail as well as many other aspects of rural development and was conducted using three types of questionnaires:

- Small scale farm questionnaire
- Community level questionnaire
- Large scale farm questionnaire

The small scale farm questionnaire was the main census instrument and it includes questions related to crop and livestock production and practices; population demographics; access to services, resources and infrastructure; issues on poverty, gender and subsistence versus profit making production units. The main sections covered are as follows:

- Identification (i.e. region, district, ward and village)
- Household and holding characteristics
- Household information
- Land ownership/tenure
- Land use
- Access and use of resources
- Crop and vegetable production
- Agro processing and by-products
- Crop storage and marketing
- On-farm investment
- Access to farm inputs and implements
- Use of credit for agricultural purposes
- Tree farming/agro-forestry
- Crop extension services
- Livelihood constraints
- Animal contribution to crop production
- Livestock
- Livestock products

- 
- Fish farming
  - Livestock extension
  - Labour use
  - Access to infrastructure and other services
  - Household facilities

The community level questionnaire was designed to collect village level data such as access and use of common resources, community tree plantation and seasonal farm gate prices.

The large scale farm questionnaire was administered to large scale farms that were either privately or corporately managed. There will be a national report on large scale farming on Tanzania Mainland.

#### **2.4 Legal Authority of the National Sample Census of Agriculture**

The NSCA 2002/03 was conducted under the legal authority of the Statistics Act 2002, among other things, makes data collected from individuals strictly confidential and to be used for statistical purposes only.

#### **2.5 Reference Period**

Two types of reference periods were used namely the agricultural year and the reference date for livestock enumeration. The agricultural year 2002/03 (that is October 2002 to September 2003) was used for the data items that are related to crop production. The reference date of enumeration for livestock and poultry count was 1<sup>st</sup> October 2003.

#### **2.6 Census Methodology**

The main focus at all stages of the census execution was on data quality and this is emphasised in this section. The main activities undertaken include:

- Census organisation
- Tabulation plan preparation
- Sample design
- Design of census questionnaires and other instruments.
- Field pre-testing of the census instruments
- Training of trainers, supervisors and enumerators
- Information Education and Communication (IEC) campaign
- Data Collection
- Field supervision and consistency checks
- Data processing:
  - Scanning
  - ICR extraction of data
  - Structure formatting application
  - Batch validation application
  - Manual data entry application
  - Tabulation preparation using SPSS
- Table formatting and charts using Excel and map generation using Mapinfo.
- Report preparation using Word and Excel.

### 2.6.1 Census Organization

The Census was conducted by the National Bureau of Statistics in collaboration with the sector ministries of agriculture, and the Office of the Chief Government Statistician in Zanzibar. At the national level the Census was headed by the Director General of the National Bureau of Statistics with assistance from the Director of Economic Statistics. The Planning Group, made up of staff from the National Bureau of Statistics, Department of Agricultural Statistics and three representatives from the Ministry of Agriculture and Food Security (Department of Policy and Planning), oversaw the overall operational aspects of the Census. At the regional level, implementation of census activities was overseen by the Regional Statistical Officer of NBS and the Regional Agriculture Supervisor from the Ministry of Agriculture and Food Security. At the District level, two supervisors from the President's Office, Regional Administration and Local Government (PORALG), managed the enumerators who also came from the same ministry.

Members of the Planning Group had a minimum qualification of a bachelor degree, the regional supervisors were either agricultural economists, statisticians or statistical officers. The district supervisors and enumerators had diploma level qualifications in agriculture.

The Census and Surveys Technical Working Group provided support in sourcing financing, approving budget allocations and technical assistance inputs as well as monitoring the progress of the census. A Technical Committee for the census was established with members from key stakeholder organisations (i.e. NBS, sector ministries of agriculture, President's Office, Planning and Privatization (POPP), PORALG, University of Dar es Salaam (UDSM), Tanzania Food and Nutrition Centre (TFNC) and the Office of Chief Government Statistician (OCGS) in Zanzibar). The main function of the committee was to approve the proposed instruments and procedures developed by the Planning Group. It also approved the tabulations and analytical reports prepared from the census data.

### 2.6.2 Tabulation Plan

The tabulation plan was developed following three user group workshops and thus reflects the information needs of the end users. It took into consideration the tabulations from previous census and surveys to allow trend analysis and comparisons.

### 2.6.3 Sample Design

The Mainland sample consisted of 3,221 villages. These villages were drawn from the National Master Sample (NMS) developed by the National Bureau of Statistics (NBS) to serve as a national framework for the conduct of household based surveys in the country. The National Master Sample was developed from the 2002 Population and Housing Census. In most cases, within each selected village, data was collected from a sub-sample of fifteen agricultural households. In few large villages thirty households were selected. The total Mainland sample was 48,315 agricultural households. In Zanzibar a total of 317 EAs were selected and 4,755 agricultural households were covered. Nationwide, all regions and districts were sampled with the exception of three urban districts (two from Mainland and one from Zanzibar).

In both Mainland and Zanzibar a stratified two stage sample was used. In the first stage, villages/enumeration areas (EAs) were selected with probability proportional to the number of villages in each district. In the second stage, 15 households were selected from a list of farming households in each Village/EA using systematic random sampling.

Table 2.1 gives the sample size of households, villages and districts for Tanzania Mainland and Zanzibar.

**Table 2.1: Census Sample Size**

Number of	Mainland	Zanzibar	Total
Households	48,315	4,755	53,070
Villages/Eas	3,221	317	3,539
Districts	117	9	126
Regions	21	5	26

---

#### **2.6.4 Questionnaire Design and Other Census Instruments**

The census questionnaires were designed following user/producer meetings to ensure that the information collected was in line with their data needs. Several features were incorporated into the design of the questionnaire to increase the accuracy of the data:

- Where feasible all variables were extensively coded to reduce post enumeration coding error.
- The definitions for each section were printed on the opposite page so that the enumerator could easily refer to the instructions whilst interviewing the farmer.
- The responses to all questions were placed in boxes printed on the questionnaire, with one box per character. This feature made it possible to use scanning and ICR technologies for data entry.
- Skip patterns were used to avoid asking unnecessary questions
- Each section was clearly numbered, which facilitated the use of skip patterns and provided a reference for data type coding for the programming of CSPro, SPSS and the dissemination applications.

Besides the questionnaires, there were other instruments used:

- Village listing forms that were used for listing households in the villages and from these list a systematic sample of 15 agricultural households were selected from each village.
- Training manual which was used by the trainers for the cascade/pyramid training of supervisors and enumerators. This manual was the trainers' guiding document on the procedures to follow during the training
- Enumerator Instruction Manual which was used as reference material.

#### **2.6.5 Field Pre-Testing of the Census Instruments**

The Questionnaire was pre-tested in five locations (Arusha, Dodoma, Tanga, Unguja and Pemba). This was done for the purpose of testing the wording, flow and relevance of the questions and to finalise crop lists, questionnaire coding and manuals. In addition to this, several data collection methodologies had to be finalised, namely, livestock numbers in pastoralist communities, cut flower production, mixed cropping, use of percentages in the questionnaire and finalising skip patterns and documenting consistency checks.

#### **2.6.6 Training of Trainers, Supervisors and Enumerators**

Cascade/pyramid training techniques were employed to maintain statistical standards. The top level training was provided to 66 national and regional supervisors (3 per region plus Zanzibar). The trainers were members of the Planning Group and the trainees were from the National Bureau of Statistics and the sector ministries of agriculture. The second level training was for the district supervisors and enumerators. This training was conducted in the regions. In each region three training sessions were conducted for the district supervisors and enumerators. In addition to training in field level Census methodology and definitions, emphasis was placed on training the enumerators and supervisors in consistency checking. Tests were given to the enumerators and supervisors and the best 50 percent of the trainees were selected to administer the smallholder and community level questionnaires. This increased the number of interviews per enumerator but it also released finance to increase the number of supervisors and hence the Supervisor Enumerator Ratio. The household listing exercise was carried out by all trained enumerators.

#### **2.6.7 Information, Education and Communication (IEC) Campaign**

Information, Education and Communication (IEC) is an important aspect of any census/survey undertaking. This is due to the fact that inadequately informed and hence uncooperative citizens may jeopardize the entire census/survey. As far as the

---

2002/03 Agricultural Sample Census was concerned, the main objective of the IEC program was to sensitize and mobilize Tanzanians to support, cooperate and participate in the census exercise.

Radio, television, newspapers, leaflets, t-shirts and caps were used to publicise the Sample Census. T-shirts and caps were used by the field staff and the village chairmen as official uniforms during the field work. The village chairmen helped to locate the selected households.

### **2.6.8 Household Listing**

The household listing exercise was done in seven days. During the listing exercise, forms ACLF1 and ACLF2 were administered. The information collected included the number of fields operated by the household, the number of different types of livestock and poultry. This information was used to determine the agricultural households. From the list of agricultural households, 15 households were selected for the interview. The selection was done using the Random Number Table.

### **2.6.9 Data Collection**

Data collection activities for the 2002/2003 Agricultural Sample Census took three months from January to March 2004. The data collection method used during the census was by interview and no physical measurements, e.g., crop cutting and field area measurement were taken. Field work was monitored by a hierarchical system of supervisors at the top of which was the Mobile Response Team followed by the national, regional, and district supervisors.

The Mobile Response Team consisted of three principal supervisors who provided overall direction to the field operation and responded to queries arising outside the scope of the training exercise. The mobile response team consisted of the Manager of Agriculture Statistics Department, Long-term Consultant and Desk Officer for the Census. Decisions made on definitions and procedures were then communicated back to all enumerators via the national, regional and district supervisors.

District supervision and enumeration were done by staff from the President's Office, Regional Administration and Local Government (PORALG). National and regional supervisions were provided by senior staff of the National Bureau of Statistics and the sector ministries of agriculture. During the household listing exercise 3,221 extension staff were used. For the enumeration of the small holder questionnaire, 1,611 enumerators were used and additional 5 percent enumerators were held in reserve in case of drop outs during the enumeration exercise.

### **2.6.10 Field Supervision and Consistency Checks**

Enumerators were trained to probe the respondents until they were satisfied with the responses given before they recorded them in the questionnaire. The first check of the questionnaires was done by enumerators in the field during enumeration. The second check was done by the district supervisors followed by regional and national supervisors. Supervisory visits at all levels of supervision focused on consistency checking of the questionnaires. Inconsistencies encountered were corrected, and where necessary a return visit to the respondent was made by the enumerator to obtain the correct information. Further quality control checks were made through a major post enumeration checking exercise where all questionnaires were checked for consistencies by all supervisors in the district offices.

---

### **2.6.11 Data Processing**

Data processing consisted of the following processes:

- Manual editing
- Data entry
- Data structure formatting
- Batch validation
- Tabulation
- Illustration production
- Report formatting

#### ***Manual Editing***

Prior to scanning, all questionnaires underwent a manual cleaning exercise. This involved checking that the questionnaire had a full set of pages, correct identification and good handwriting. A score was given to each questionnaire based on the legibility and the completeness of enumeration. This score will be used to assess the quality of enumeration and supervision in order to select the best field staff for future censuses/surveys.

#### ***Data entry/Scanning and ICR Extraction Technologies***

Scanning and ICR data capture technology was used for the small holder questionnaire. This not only increased the speed of data entry, it also increased the accuracy due to the reduction in keystroke errors. Interactive validation routines were incorporated into the ICR software to track errors during the verification process. The scanning operation was so successful that it is highly recommended that this technology be adopted for future censuses/surveys.

The Census and Surveys Processing Program (CSPro) was used to enter 2,880 of small holder questionnaires that were rejected by the Intelligent Character Recognition (ICR) extraction application.

#### ***Data Structure Formatting***

A program was developed in visual basic to automatically alter the structure of the output from the scanning/extraction process in order to harmonise it with the manually entered data. The program automatically checked and changed the number of digits for each variable, the record type code, the number of questionnaires in the village, the consistency of the Village Identification (ID) code and saved the data of one village in a file named after the village code.

#### ***Batch Validation***

A batch validation program was developed in order to identify inconsistencies within a questionnaire. This is in addition to the interactive validation during the ICR extraction process. The procedures varied from simple range checking within each variable to more complex checking between variables. It took six months to screen, edit and validate the data from the smallholder questionnaire. After the long process of data cleaning, the results were prepared based on a pre-designed tabulation plan.

#### ***Tabulations***

Statistical Package for Social Sciences (SPSS) was used to produce the Census results and Microsoft Excel was used to organize the tables and compute additional indicators.

---

***Analysis and Report Preparation***

The analysis in this report focuses on regional and district production estimates, districts comparisons and time series analysis. Microsoft Excel was used to produce charts; whereas Microsoft Word was used to compile the report.

***Data Quality***

A great deal of emphasis was placed on data quality throughout the whole exercise from planning, questionnaire design, training, supervision, data entry, validation and cleaning/editing. As a result of this NBS believes that the Census is highly accurate and representative of what was experienced at field level during the Census year. With very few exceptions the variables in the questionnaire are within the norms for Tanzania and they follow expected time series trends when compared to historical data. Standard Errors and Coefficients of Variation for the main variables can be found in the Technical Report (Volume I).

**2.7 Funding Arrangements**

The Agricultural Sample Census was supported mainly by the European Union (EU) who financed most of the operational activities. Other funds for operational activities came from the Government of Tanzania, Government of Japan, United Nations Development Programme (UNDP) and other partners in the Pool Fund of the Vice President's Office (VPO). In addition to this, technical assistance was provided by the European Union (EU), Department for International Development (DFID) and Japanese International Cooperation Agency (JICA). Technical assistances were managed by Ultek Laurence Gould Consultants (ULG), Scotts Agriculture Consultancy Ltd (SAC) and the Food and Agriculture Organisation (FAO).

### PART III: RESULTS AND ANALYSIS

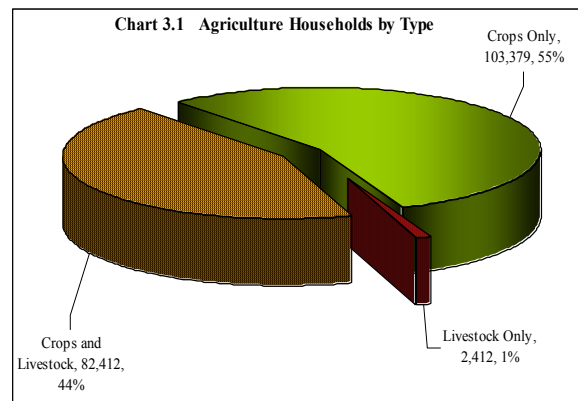

This part of the report presents the results of the census data for Mara region which are based on the data tables presented in Appendix II. The results are presented in different forms including brief summaries, charts, condensed tables, graphs and maps in order to make it easier for the users to understand. Comparisons are made between related variables and between districts. Comparisons are also made with past censuses/surveys results such as the 1994/95 National Sample Census of Agriculture (NSCA), the 1995/96, the 1996/97 Expanded Agricultural Surveys, the 1997/98 Integrated Agricultural Survey, the 1998/99 District Integrated Agricultural Survey and the 1999/00 Rapid Agricultural Appraisal Survey. The presentation of results is divided into four main sections which are household characteristics, crop results, livestock results and poverty indicators.

#### 3.1 Household Characteristics

##### 3.1.1 Type of Households

The number of agricultural households in Mara region was 188,203. The largest number of agriculture households was in Tarime (79,170) followed by Musoma Rural (49,995), Bunda (30,721), Serengeti (27,864) and Musoma Urban (453). The highest density of household was found in Musoma Rural district (32 households/km<sup>2</sup>), Tarime (21 households/km<sup>2</sup>) and Bunda (20 households/km<sup>2</sup>).

Most households (103,379 households, 54.9% of the total agriculture households in the region) were involved in growing crops only, 2,412 households (1.3%) were involved in livestock keeping only and 82,412 households (43.8%) were involved in crop production as well as livestock keeping. There were no pastoralists in the region (Chart 3.1 and Maps 3.1, 3.2, 3.3, 3.4, 3.5 and 3.6).

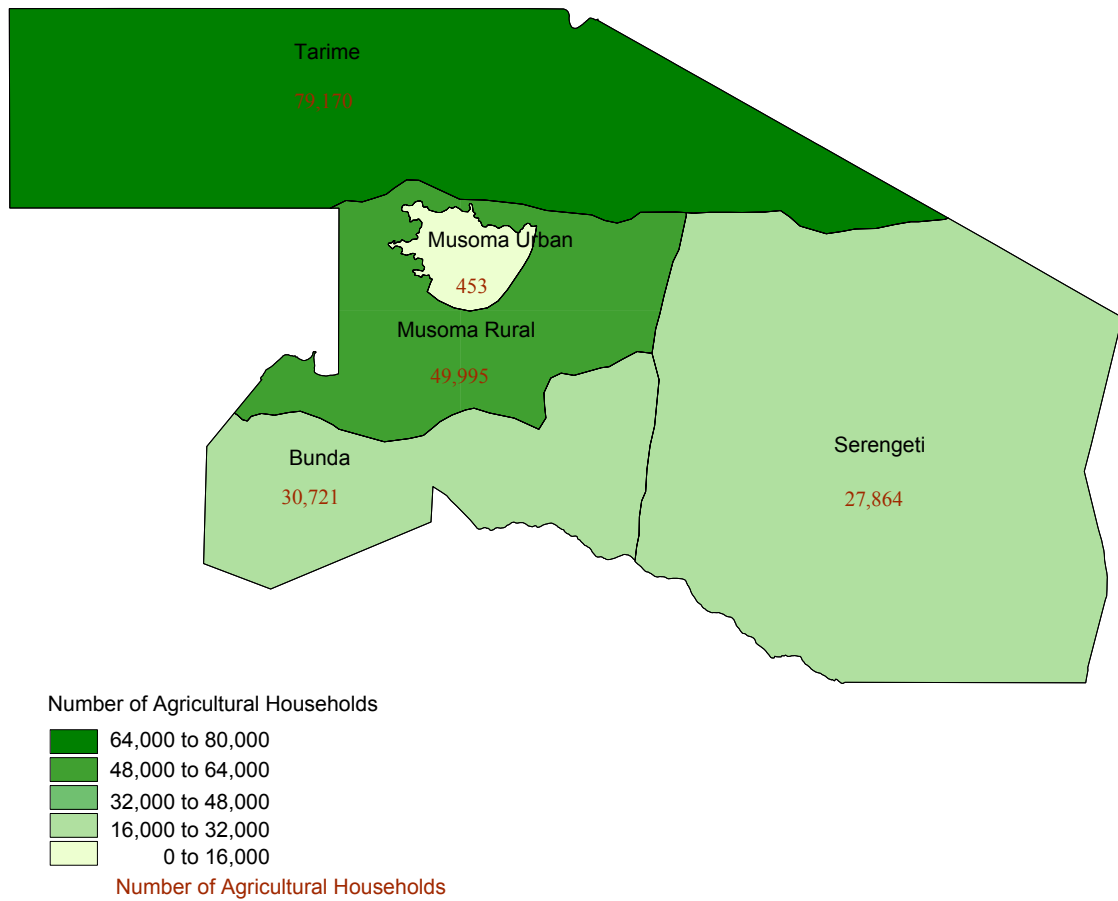

##### 3.1.2 Livelihood Activities/Source of Income

The census results for Mara region indicate that most of the agricultural households ranked annual crop farming as an activity that provides most of their livelihood/cash income followed by tree/forest resources, permanent crop farming, off-farm income, livestock keeping/herding, remittances and fishing/hunting & gathering. Musoma Urban district is the only district whereby tree/forest resources is not the second most important livelihood activity, being replaced by off-farm income (Table 3.1).

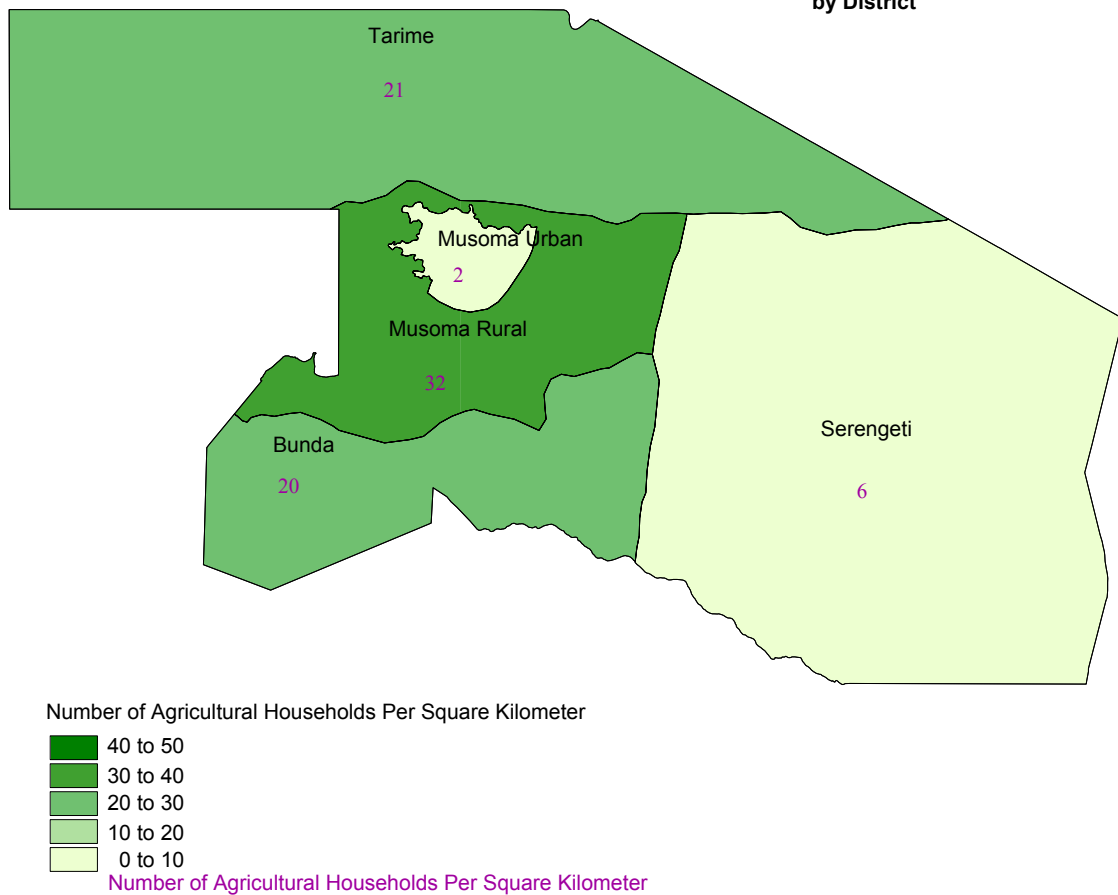

**Table 3.1 Rank in Order of Importance Livelihood Activities/Source of Income of the Household in Order of Importance By District**

District	Livelihood Activity						
	Annual Crop Farming	Permanent Crop Farming	Livestock Keeping / Herding	Off Farm Income	Remittances	Fishing / Hunting & Gathering	Tree / Forest Resources
Tarime	1	3	4	5	6	7	2
Serengeti	1	3	5	4	6	7	2
Musoma Rural	1	4	5	3	7	6	2
Bunda	1	4	5	3	7	6	2
Musoma Urban	1	3	6	2	7	5	4
Total	1	3	5	4	6	7	2

**MAP 3.5 MARA**  
**Number of Crop Growing Households**  
**Per Square Kilometer of Land**  
**by District**

**MAP 3.6 MARA**  
**Percent of Crop and Livestock**  
**Households by District**

**3.1.3 Sex and Age of Heads of Households**

The number of male-headed agricultural households in Mara region was 145,187 (77% of the total regional agricultural households) while the female-headed households were 43,016 (23%). The mean age of household heads in Mara region was 46 years (45 years for male heads and 48 years for female heads).

The percentage trend based on six census/survey years shows that there has been a very small change in the distribution of agricultural households between male and female headed households (Chart 3.2).

**3.1.4 Number and Age of Household Members**

Mara region had a total rural agricultural population of 1,097,742 of which 548,314 (50%) were males and 549,427 (50%) were females. Whereas age group 0-14 constituted 46 percent of the total rural agricultural population, age group 15-64 (active population) was only 50 percent (Chart 3.3).

Mara region had an average household size of 5.8 persons with Musoma Rural and Bunda having the highest household size of 6.7 and Tarime district having the lowest household size of 4.9.

**3.1.5 Level of Education**

In order to obtain information on the level of education, information on literacy and education attainment were obtained for all persons aged five years and above in all selected households.

**Literacy**

The information on literacy level for family members aged five years and above was obtained by asking individual private households if their respective family members could read and write in Kiswahili only, English only, both English and Swahili or in any other language. Literacy was based on the ability to read and write Swahili, English or both.

**Literacy Level for Household Members**

Mara region had a total literacy rate of 72 percent. The highest literacy rate was found in Musoma Urban (81%), followed by Tarime district (74%) and Musoma Rural district (74%), Serengeti and Bunda districts had the lowest literacy rates of 69 percent each (Chart 3.4).

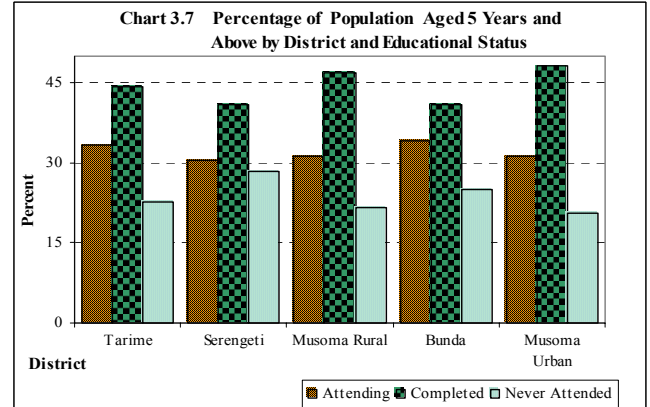

**Literacy Rates for Heads of Households**

The literacy rate for the heads of households in Mara region was 73.5 percent. The literacy rate for male heads was 82.1 and that of female heads was 44.2 percent. The literacy rate of male heads was higher than that of female heads in all districts. The district with the highest literacy rate amongst heads of households was Musoma Rural (76.8%), followed by Musoma Urban (74.6%), Bunda (73.1%), Tarime (72.2%) and Serengeti (71.6%) (Chart 3.5).

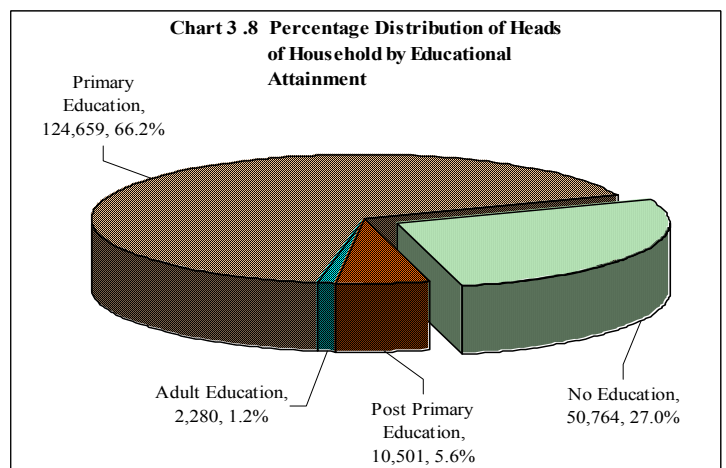

**Educational Status**

Information on educational status was collected from individual agricultural households. The results show that 44 percent of the population aged 5 years and above in agricultural households in Mara region had completed different levels of education and 32 percent were still attending school. Those who have never attended school were 24 percent (Chart 3.6).

Agricultural households in Musoma Urban district had the highest percentage of population aged 5 years and above who had completed different levels of education (48.2%). This was followed by Musoma Rural (46.9%), Tarime district (44.2%), Serengeti district (41.0%) and Bunda district with 41 percent (Chart 3.7).

The number of heads of agricultural households with formal education in Mara region was 135,160 (71.8%), those without any education were 50,764 (27.0%) and

those with only adult education were 2,280 (1.2%). The majority of heads of agricultural households in Mara region had primary level education (66.2%), whereas only 5.6 percent had post primary education (Chart 3.8).

With regard to the heads of agricultural households with primary or secondary education in Mara region, Musoma Rural district had the highest percentage of household heads with primary education (70.5%) and the second lowest percent of household heads with secondary education (3.6%). This was followed by Bunda (69.1% for primary and 3.7% for secondary), Serengeti (65.9% for primary and 2.4% for secondary), Tarime (62.6% for primary and 6.7% for secondary) and Musoma Urban (55.7% for primary and 14.5% for secondary). The district with the highest percent of households with no education was Serengeti (30.2%), followed by Tarime (27.7%), Bunda (26%), Musoma Urban (25.4%) and Musoma Rural (24.6%).

### 3.1.6 Off-farm Income

Off-farm income refers to cash generated from non-agricultural activities. This can be either from permanent employment (i.e., government, private sector or other), temporary employment or labourers. It also includes cash generated from working on farms belonging to other farmers. Off-farm income is important amongst agriculture households in Mara with 58.3 percent of households having at least one member with off-farm income. In the region, 72,002 households (38%) had only one member aged 5 and above involved in off-farm income generating activity, 25,816 households (14%) had two members involved in off-farm income generating activities and 11,969 households (6%) had more than two members involved in off-farm income generating activities. Households with no off-farm income in Mara region constitute 42 percent of the total agricultural households in the region (Chart 3.9).

Bunda district had the highest percentage of agriculture households with off-farm income (66.3% of total agriculture households in the district), followed by Musoma Urban (62.5%), Musoma Rural (56.1%) and Tarime (56.8%). Serengeti district had the lowest percentage of agriculture households with off-farm income in the region (48.7%). The district with the highest percent of agriculture households with more than one member with off-farm income was Musoma Urban (24.5%), however Serengeti district had the lowest percent of households with more than one member having off-farm income (10.6%) (Chart 3.10).

## 3.2 Land Use

Land area and planted area are two different types of area measurements. Land area refers to the physical area of land and is the same regardless of the number of crops planted on the land in one year. Planted area is the total area of crops planted in a year and the area is summed if there were more than one crop on the same land per year. A number of terms are used in this section which requires defining for clarification as follows:

Land available refers to the area of land that has been allocated to smallholders through customary law, official title or other forms of ownership. Land available does NOT mean the total area of land that is designated as agriculture land in the country, however it is the land that is available to smallholders given the location of villages and lack of access to more remote parcels of unused agriculture designated land.

Usable land refers to the available land minus the land that cannot be used e.g. bare rock, shallow soils, steep slopes, swamp areas etc. It does however include un-cleared bush, Utilised land refers to the land that was used during the year.

**3.2.1 Area of Land Utilised**

The total area of land available to smallholders in Mara region was 487,543 ha, however the utilisable land was 475,576 ha (95% of the land area available in the region). The regional average land area utilised for agriculture per household was only 1.9 ha. This figure is below the national average of 2.0 hectares.

Large differences in land area utilised per household exist between districts with Serengeti and Bunda utilizing 2.5 ha per household in each district. The smallest land area utilised per household was found in Musoma Urban (0.8 ha). The percentage utilized of the usable land per household was highest in Musoma Urban (84.5%) and lowest in Serengeti (74.6%). About seventy six percent of the total land available to smallholders was utilised implying that only 24 percent of usable land available to smallholders was not used (Chart 3.11 and Map 3.7).

**3.2.2 Types of Land Use**

The area of land under temporary monocrop was 157,427 hectares (32.3% of the total land available to smallholders in Mara region), followed by uncultivated usable land (109,823 ha, 22.5%), area under permanent mono crops (86,423 ha, 17.7%), area under temporary mixed crops (34,674 ha, 7.1%), area under permanent / annual mix (27,613 ha, 5.7%), area under fallow (20,348 ha, 4.2%), area under pasture (12,382 ha, 2.5%), area unusable (11,967 ha, 2.5%), area under planted tree (7,956 ha, 1.6%), area rented to others (7,836 ha, 1.6%), Area under permanent mixed crops (6,373 ha, 1.3%) and area under natural bush (4,720 ha, 1.0%) (Chart 3.12).

### 3.3 Annual Crops and Vegetable Production

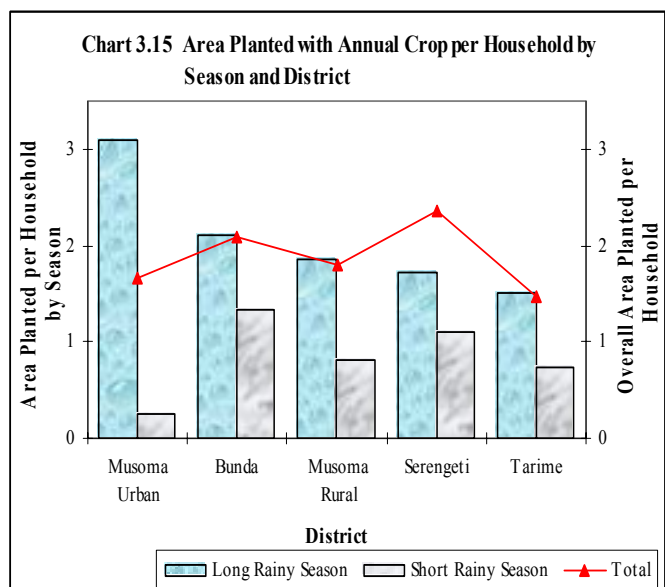

Mara region has two rainy seasons, namely the short rainy season (October to December) and the long rainy season (March to May). The quantity of crops produced in both seasons will be used as a base for comparison with the past surveys and censuses.

#### 3.3.1 Planted Area

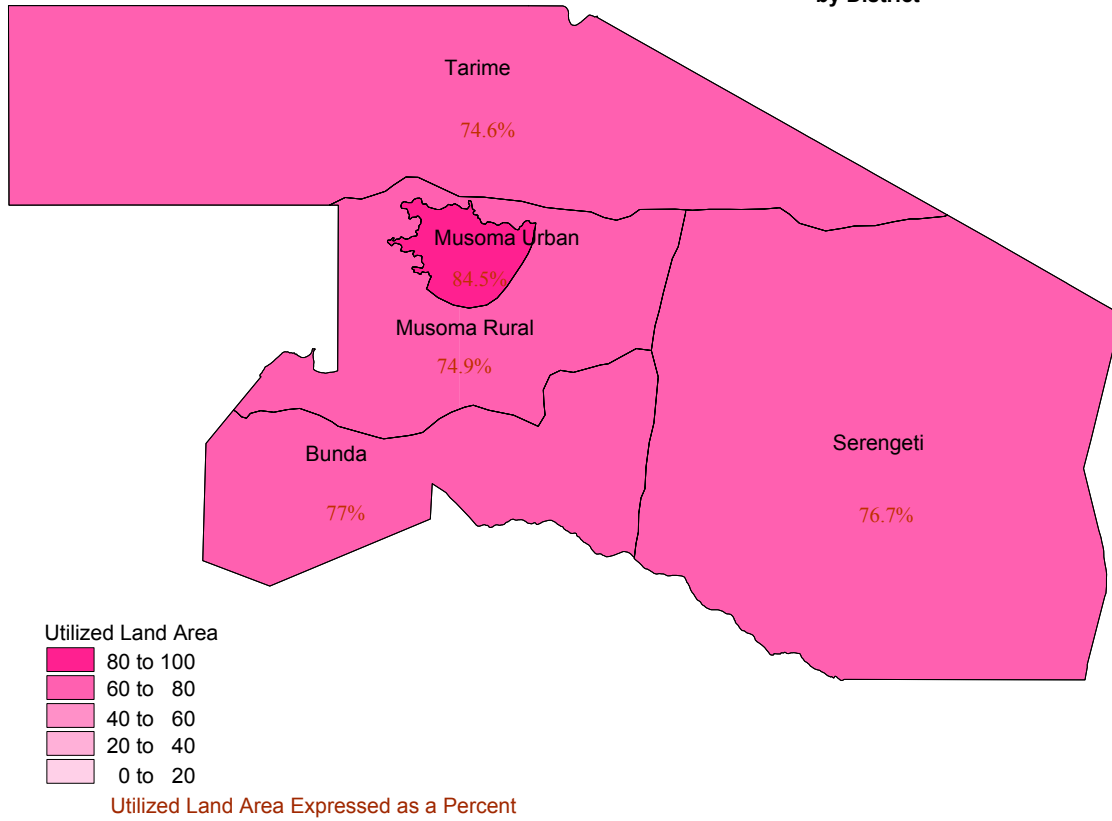

The area planted with annual crops and vegetables in Mara region was 333,525 hectares out of which 120,270 hectares (36%) were planted during the short rainy season and 213,255 hectares (64%) during long rainy season (Chart 3.13).

The average areas planted per household during the short and long rainy seasons was 0.65 and 1.15 ha respectively. The district with the largest area planted per household in Mara region was Serengeti (2.4 ha), followed by Bunda (2.1 ha) and Musoma Rural (1.8 ha). The district with the smallest average area planted per household was Tarime (1.5 ha). While in Bunda average planted area per household during the short rainy season is higher than that of the long rainy season, the reverse is true for the rest of the districts in the region (Chart 3.14 and Map 3.8).

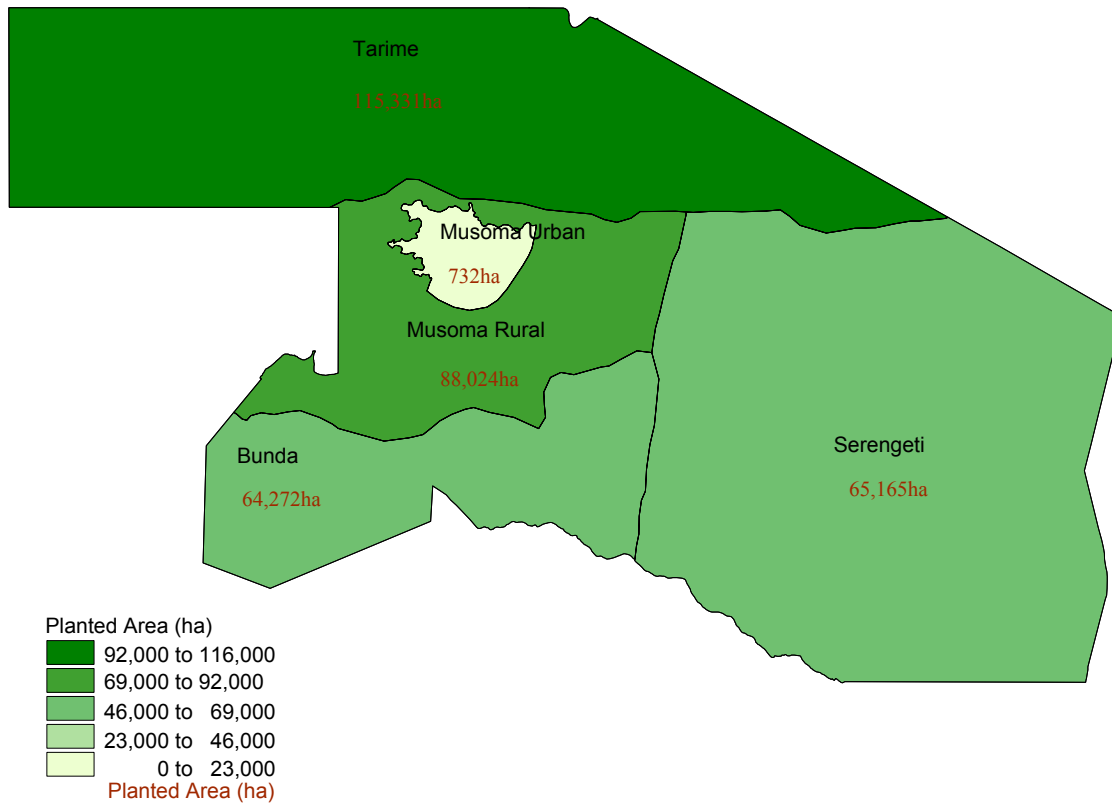

The average area planted per household during the long rainy season in Mara region was 1.7 hectares, however, there were large district differences. Although Musoma Urban had the largest planted area per household of 3.10 ha, it is difficult to make concrete comments because of the small numbers involved. Bunda had the second largest planted area per household (2.10 ha), followed by Musoma Rural (1.85%) and Serengeti (1.73 ha). The smallest planted area per household during the long rainy season was in Tarime (1.51 ha). During the short rainy season, Bunda district had the largest planted area per household, followed by Serengeti, Musoma Rural and Tarime districts. In Mara region, there is a planted area of 0.8 ha more in the long rainy season compared to the short rainy season and most of the difference is in Musoma Rural district (Chart 3.15 and Map 3.9).

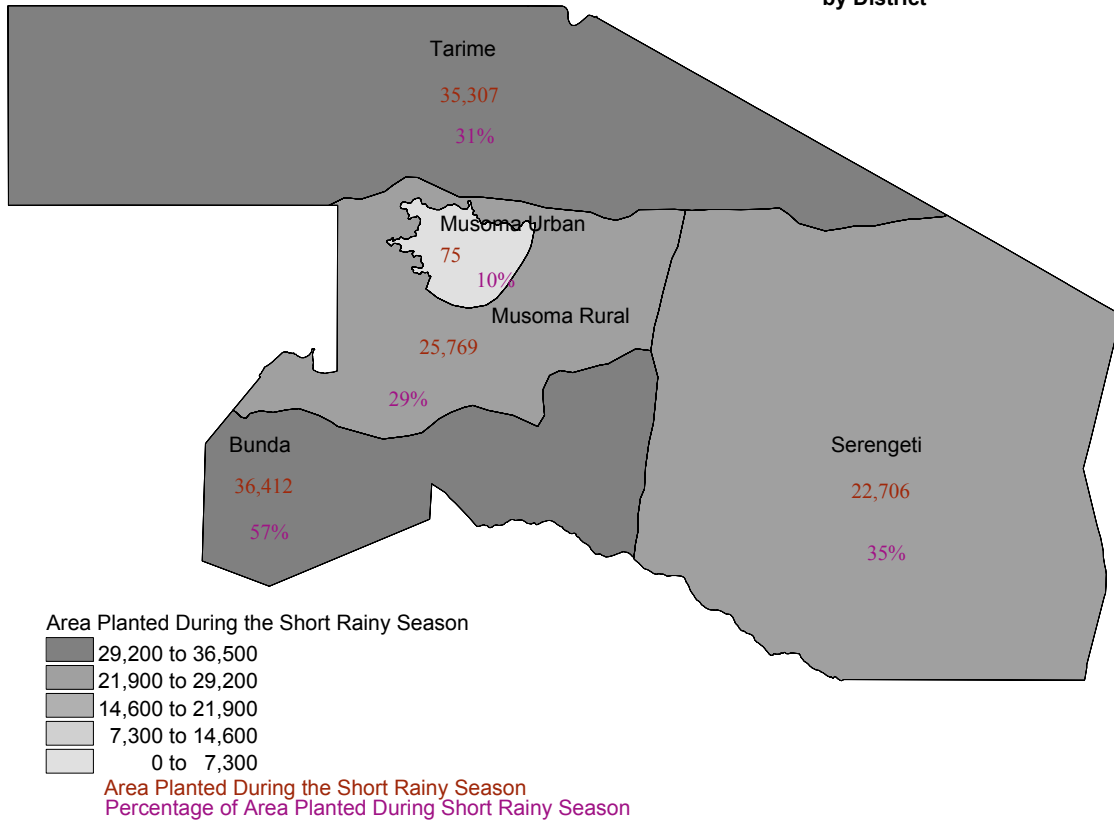

**MAP 3.7 MARA**

**the Short Rainy Season**  
**by District**

**MAP 3.10 MARA**  
**Area Planted With Cereals and Percent**  
**of Total Land Planted With**  
**Cereals by District**

**Analysis of the Most Important Crops**

Results on crop production are presented in two different sections. The first section compares the importance of each crop regardless of whether they are annual or permanent. The second section contains a more detailed analysis on production based on crop types.

**3.3.2 Crop Importance**

Cassava is the dominant annual crop grown in Mara region and it had a planted area 1.3 times greater than Maize, which had the second largest planted area. The area planted with cassava constituted 34.7 percent of the total area planted with annual crops in the region. Other crops in order of their importance (based on area planted) are sorghum, cotton, sweet potatoes, beans and finger millet (Chart 3.16).

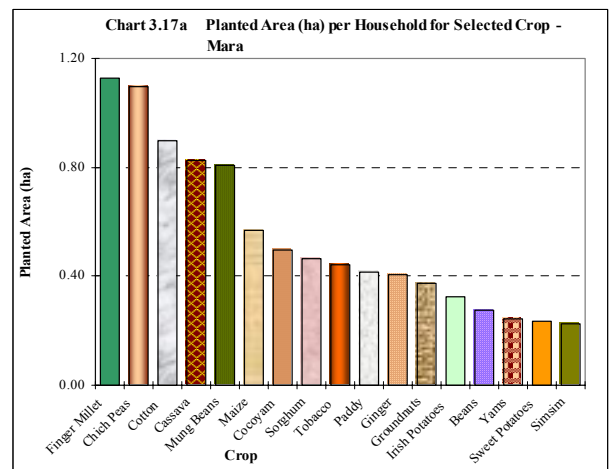

Chart 3.17a shows the area planted per household for selected crops. Households that grew finger millet, chick peas, cotton, cassava and mung beans had larger planted areas per household than those growing other crops.

**3.3.3 Crop Types**

Cereals are the main crop type grown in Mara region. The area planted with cereals was 161,701 ha (48.5% of the total planted area), followed by roots and tubers with 133,117 ha (39.9%), annual cash crops (20,614 ha, 6.2%), pulses (14,438 ha, 4.3%), fruits and vegetables (2,110 ha, 0.6%) and oil seeds (1,572 ha, 0.5%) (Chart 17b).

About 52 percent of cereals, 47 percent of pulses, 56 percent of oil seeds, 43 percent of fruit and vegetables and 90 percent of cash crops were planted during the short rainy season.

### 3.3.4 Cereal Crop Production

The total production of cereals was 180,022 tonnes. Maize was the dominant cereal crop with a production of 110,662 tonnes which was 61.5 percent of total cereal crop production, followed by sorghum (30.3%), finger millet (4.8%) and paddy (3.5%). Tarime district had the largest planted area of cereals in the region (65,168 ha) followed by Serengeti (40,017 ha), Musoma Rural district (28,391 ha), Bunda district (28,070 ha) and Musoma Urban (55 ha) (Map 3.10).

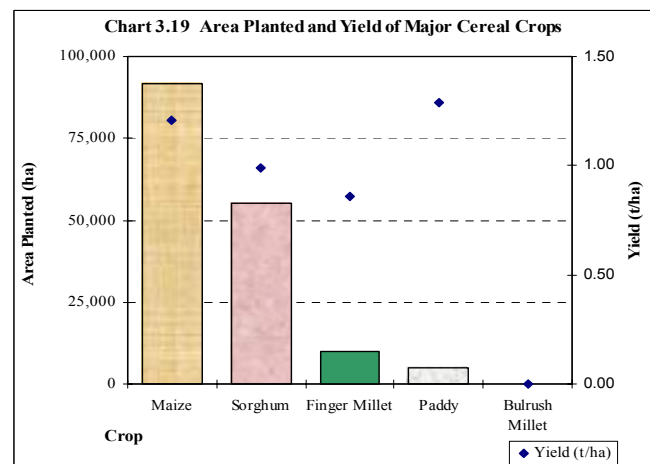

**Table 3.2: Area, Production and Yield of Cereal Crops by Season**

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area Planted (ha)	Quantity Harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (Kg/ha)	Area Planted (ha)	Quantity Harvested (tons)	Yield (Kg/ha)
Maize	48,177	55,996	1,162	43,628	54,666	1,253	91,804	110,662	1,205
Paddy	2,270	2,366	1,043	2,603	3,905	1,500	4,873	6,271	1,287
Sorghum	29,922	28,842	964	25,118	25,664	1,022	55,040	54,506	990
Finger Millet	4,245	3,776	889	5,712	4,807	842	9,957	8,583	862
Bulrush Millet	0	0	0	27	0	0	27	0	0
<b>Total</b>	<b>84,614</b>	<b>90,980</b>		<b>77,087</b>	<b>89,042</b>		<b>161,701</b>	<b>180,022</b>	

The total area planted with cereals during both the short and long rainy seasons was 161,701 ha out of which 84,614 ha (52%) were planted in short rainy season and 77,087 ha (48%) were planted during the long rainy season. The long rainy season accounted for 49.5 percent of the total cereals produced in both seasons. The area planted with maize during the long rainy season was 56.6 percent of the total area planted with cereals in that season followed by sorghum (32.6%) and finger millet (7.4%) (Table 3.2).

The area planted with maize was dominant and it represented 57 percent of the total area planted with cereal crops, then followed by sorghum (34%), finger millet (6%), paddy (3%) and bulrush millet (0.02%).

The yields of the main cereal crops were as follows; paddy 1,287 kg/ha, maize 1,205 kg/ha, sorghum 990 kg/ha and finger millet 862 kg/ha (Chart 3.19).

#### Maize

Maize dominates the production of cereal crops in the region. The number of households growing maize in Mara region during the long rainy season was 77,336 (41.1% of the total crop growing households in the region). The total production of maize was 110,662 tonnes from a planted area of 91,804 hectares resulting in a yield of 1.21 t/ha.

Chart 3.20 shows the maize production trend (in thousand metric tonnes) for Mara region (combined long and short rainy seasons). There was a sharp drop in maize production from 106,000 tonnes in 1995 to 66,000 tonnes in 1996. This was followed by a gradual increase to 107,000 tonnes in 1999 after which the production remained more or less constant up to year 2003. The average area planted with maize per

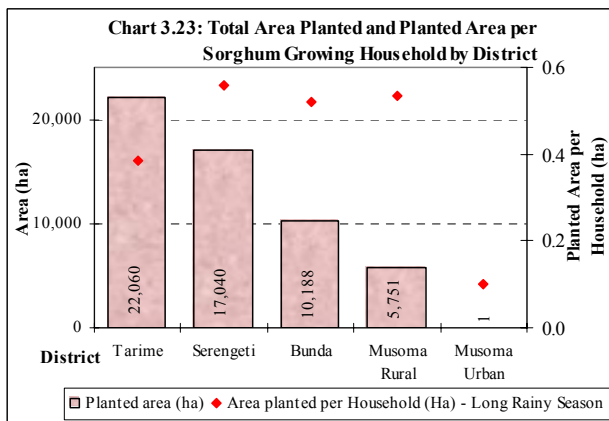

household in the long rainy season was 0.56 hectares, however it ranged from 0.30 hectares in Musoma Urban district to 0.73 hectares in Bunda district (Map 3.11). Tarime district had the largest area of maize (39,273 ha), followed by Musoma Rural (19,326 ha), Serengeti (17,490 ha), Bunda (15,668 ha) and Musoma Urban (47 ha) (Chart 3.21 & Map 3.11 & 3.12).

Charts 3.20 and 3.22 show that, from the year 1997 to 2003 there has been a gradual increase in yield from 0.6 tons/ha to 1.2 tons/ha as well as gradual decrease in area planted from 143,500 to 91,804 hectares. The quantity produced increased gradually over the same period from 88,200 tonnes to 110,665 tonnes. This trend indicates that the increase in maize production in the region was associated with the increase in yield (Chart 3.22).

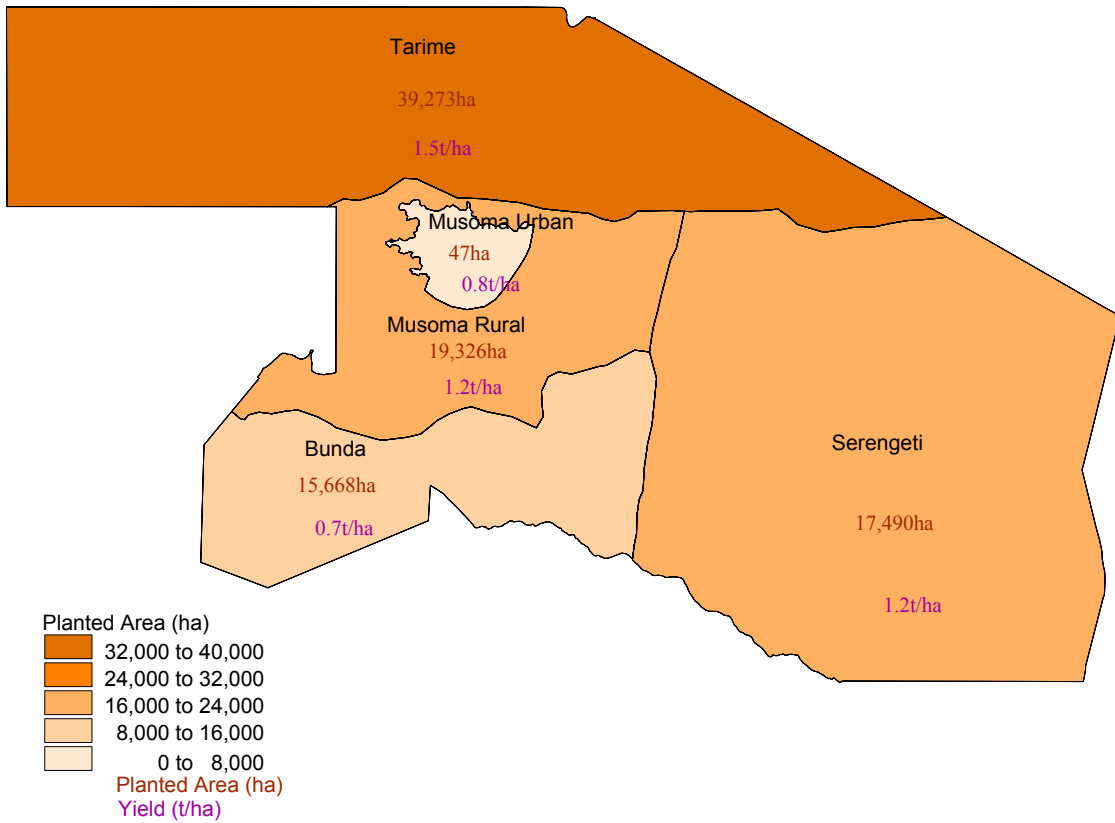

**Sorghum**

Sorghum was the second most important cereal crop in the region in terms of planted area. The number of households that grew sorghum in Mara region during the long rainy season was 54,589. This represents 43.7 percent of the total crop growing households in Mara region in the long rainy season. The total production of sorghum was 54,506 tonnes from a

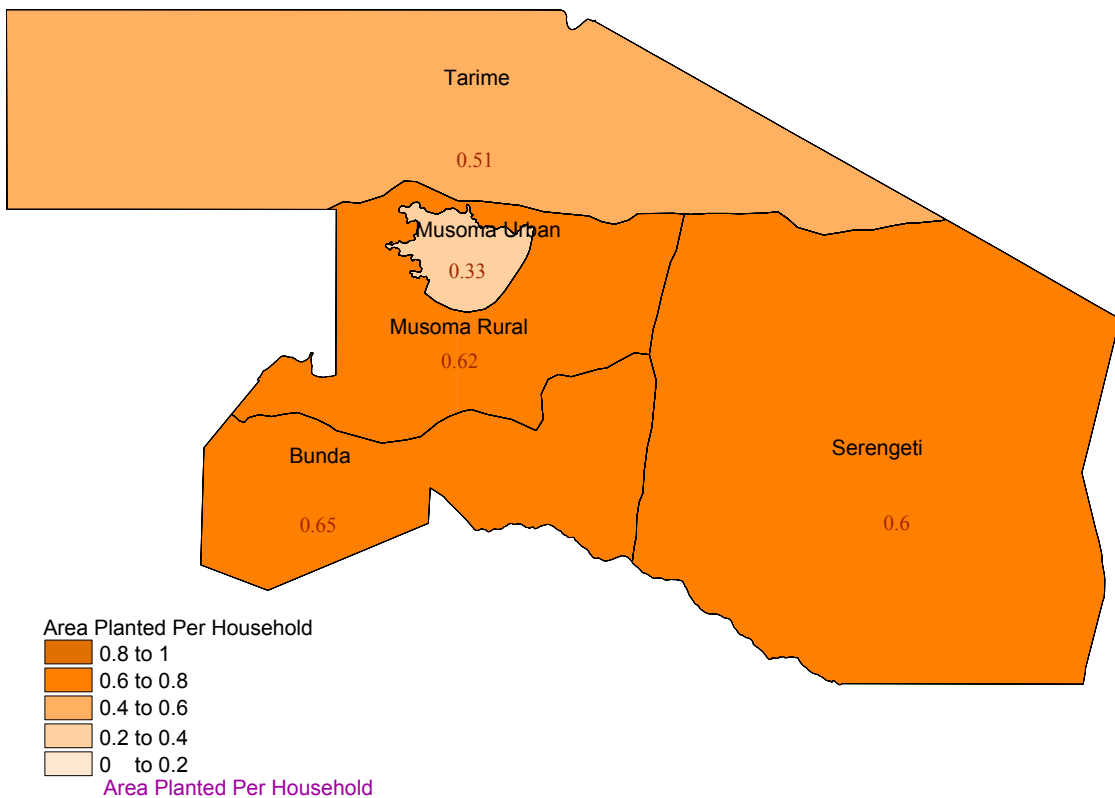

planted area of 55,040 hectares resulting in a yield of 0.99 t/ha. The district with the largest area planted with sorghum was Tarime (22,060 ha) followed by Serengeti (17,040 ha), Bunda (10,188 ha), Musoma Rural (5,751 ha) and Musoma Urban (1 ha) (Map 3.13). There are significant variations in the average area planted per sorghum growing household among the districts in the long rainy season ranging from 0.10 ha in Musoma Urban to 0.55 ha in Bunda (Chart 3.23 and Map 3.14).

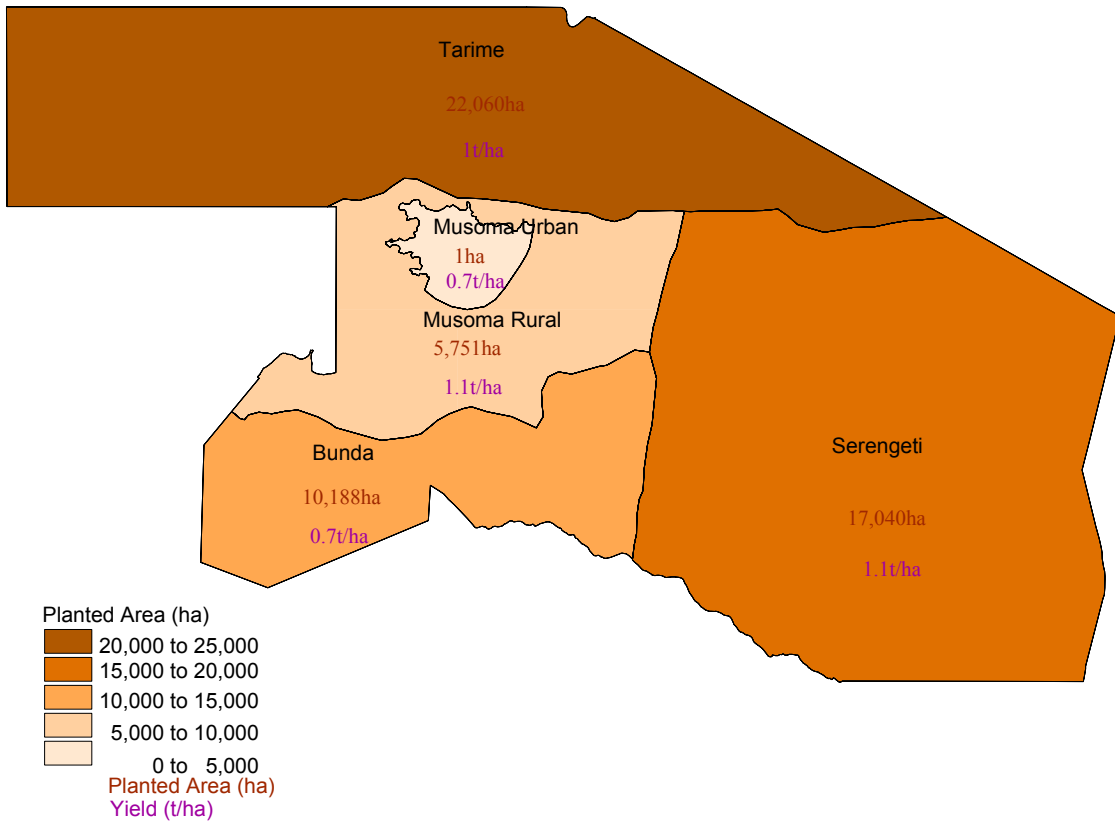

**MAP 3.11 MARA  
Planted Area and Yield of Maize  
by District**

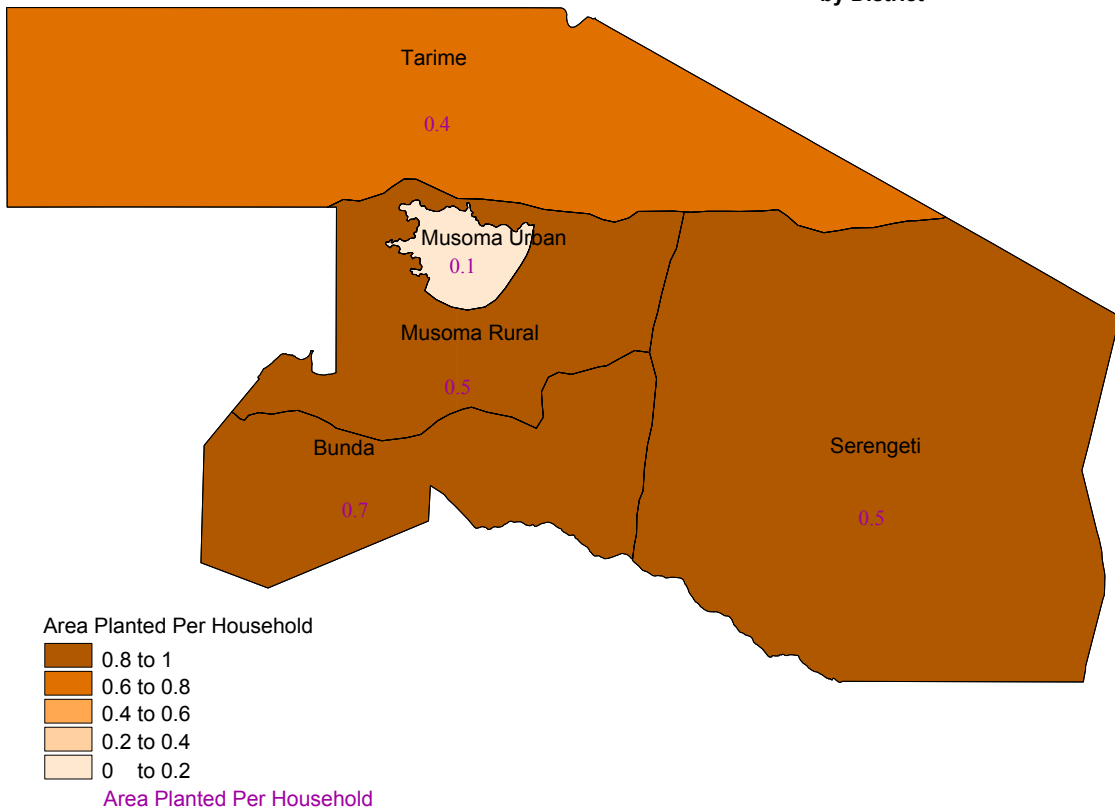

**MAP 3.12 MARA  
Area Planted Per Maize Growing  
Household by District**

**MAP 3.13 MARA**  
**Planted Area and Yield of Sorghum**  
**by District**

**MAP 3.14 MARA**  
**Area Planted Per Sorghum**  
**Growing Household**  
**by District**

There was an increase in sorghum production from 26,000 tonnes in 1995 to 57,000 tonnes in 1998 after which the production dropped to 43,000 tons by 2000. The production rose again to 55,000 tonnes in 2003. The area planted with sorghum has increased over the three year period from 1996 to 1998. During this period the region experienced decreasing yield in maize. Gradual increase in sorghum production during this period was mainly due to increase in area planted with sorghum. On the other hand, whilst the area planted with sorghum during the four year period from 1999 to 2003 was decreasing, the productivity per unit of land planted with sorghum was increasing. Increasing production from 2000 to 2003 is mainly attributed to the increasing yield (Charts 3.24 and 3.25).

**Other Cereals**

Other cereals (finger millet, paddy and bulrush millet) were produced in relatively small quantities compared to maize and sorghum. The district with the largest area planted with finger millet was Serengeti (3,820 ha, 38%) followed by Tarime (2,962 ha, 30%), Musoma Rural (1,742 ha, 17%) and Bunda (1,433 ha, 14%). There was no finger millet produced in Musoma Urban. The district with the highest area planted with paddy was Serengeti (1,641 ha, 33.7%) closely followed by Musoma Rural (1,572 ha, 32.3%), Tarime (872 ha, 17.9%), Bunda (781 ha, 16.0%) and Musoma Urban (7 ha, 0.1%). A small planted area (27ha) of bulrush millet was found in Serengeti district (Chart 3.26).

**3.3.5 Roots and Tuber Crops Production**

The total production of roots and tubers was 161,111 tonnes. Cassava production was higher than any other root and tuber crop in the region with a total production of 115,747 tonnes representing 71.8 percent of the total root and tuber crops production in the region. This was followed by sweet potatoes with 43,234 tonnes (26.8%), Irish potatoes (1,781 tonnes, 1.1%), yams (277 tonnes, 0.2%) and cocoyam (71 tonnes 0.0%) (Chart 3.27 and Table 3.3).

The area planted with cassava was larger than any other root and tuber crop and it was the most important crop in Mara in terms of planted area (34.7% of the total area planted with annual crops and vegetables and it accounted for 86.9 percent of

the area planted with roots and tubers), followed by sweet potatoes (12.5%), Irish potatoes (0.4%), cocoyams (0.1%) and yams (0.1%).

Cassava is produced in both the long and the short rainy seasons. However, it was not possible to separate cassava production by season as the growth period spans both seasons, even over a year for certain varieties. Because of this, cassava has been combined and reported under the long rainy season only. Because of this it is difficult to determine the total planted area and production for roots and tubers for individual seasons.

However, excluding cassava, 53 percent of the area planted with roots and tubers was during the long rainy season. Sweet potatoes had the largest planted area in each season (95% and 96% in short and long rainy seasons respectively). The

yield of Irish potatoes was 3.28 t/ha, that of yams was 2.62 t/ha, sweet potatoes 2.60 t/ha, cassava 1.00 t/ha and cocoyams 0.66 t/ha (Table 3.3).

**Table 3.3: Area, Quantity and Yield of Roots and Tuber Crops by Season**

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area Planted (ha)	Quantity Harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (Kg/ha)	Area Planted (ha)	Quantity Harvested (tons)	Yield (Kg/ha)
Cassava	0	0	0	115,739	115,747	1,000	115,739	115,747	1,000
Sweet Potatoes	7,714	20,906	2,710	8,907	22,328	2,507	16,621	43,234	2,601
Irish Potatoes	299	1,372	4,584	244	409	1,679	543	1,781	3,281
Yams	23	14	603	83	263	3,190	106	277	2,623
Cocoyam	94	2	21	14	70	4,883	108	71	661
<b>Total</b>	<b>8,130</b>	<b>22,294</b>		<b>124,987</b>	<b>138,817</b>		<b>133,117</b>	<b>161,111</b>	

### Cassava

The number of households growing cassava in Mara region during the long rainy season was 138,982. This represented 74 percent of the total crop growing households in the region. The total production of cassava during the census year was 115,747 tonnes from a planted area of 115,739 hectares resulting in a yield of 1.0 t/ha.

Previous censuses and surveys indicate that the area planted with cassava increased gradually over the period 1995 to 1998 after which it decreased in the year 1999 after which there was a small increase in year 2003 (Chart 3.28).

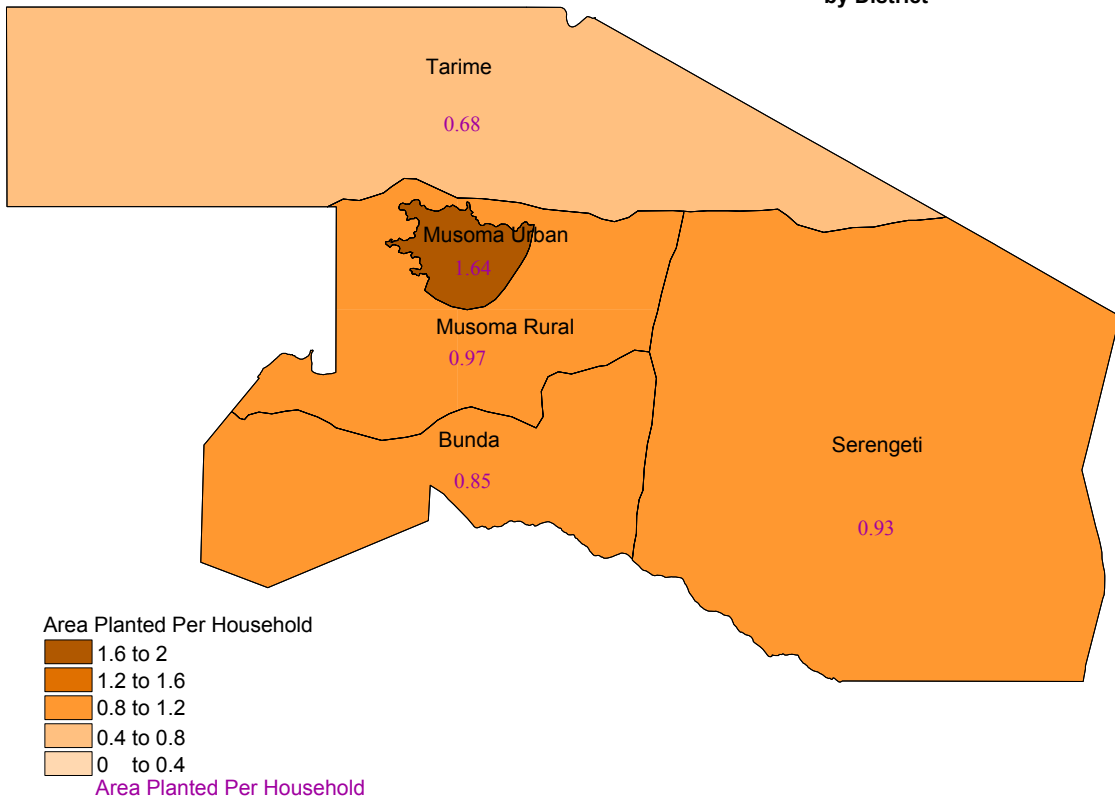

The area planted with cassava accounted for 34.7 percent of the total area planted with annual crops and vegetables in the census year. Tarime district had the largest planted area of cassava (41,581 ha, 35.9% of the cassava planted area in the region), followed by Musoma Rural (41,207 ha, 35.6%), Bunda (16,599 ha, 14.3%), Serengeti (15,760 ha, 13.6%) and Musoma Urban (592 ha, 0.5%) (Map 3.15). However, the percent of the total with cassava for Musoma Urban is comparably high and is considered as unrepresentative due to the small number of observations in the district. The second highest proportion of land planted with cassava, was Musoma Rural district (46.8%), followed by Tarime (36.1%), Bunda (25.8%) and Serengeti (24.2%) (Chart 3.29).

**MAP 3.15 MARA**  
**Planted Area and Yield of Cassava**  
**by District**

**MAP 3.16 MARA**  
**Area Planted Per Cassava**  
**Growing Household**  
**by District**

The average cassava planted area per cassava growing households was 0.83 hectares. However, with exception of Musoma Urban, there were small district variations in average area planted with cassava per household among the rest of the districts. The largest planted area per cassava growing household was found in Musoma Urban (1.64 ha). This is followed by Musoma Rural (0.98 ha), Serengeti (0.94 ha), Bunda (0.85 ha) and Tarime (0.69 ha) (Chart 3.30 and Map 3.16).

**Sweet Potatoes**

The number of households growing sweet potatoes in Mara region during the long rainy season was 36,514 (19.3% of the total crop growing households in the region). The total production of sweet potatoes during the census year was 43,234 tonnes from a planted area of 16,621 hectares resulting in a yield of 2.6 t/ha.

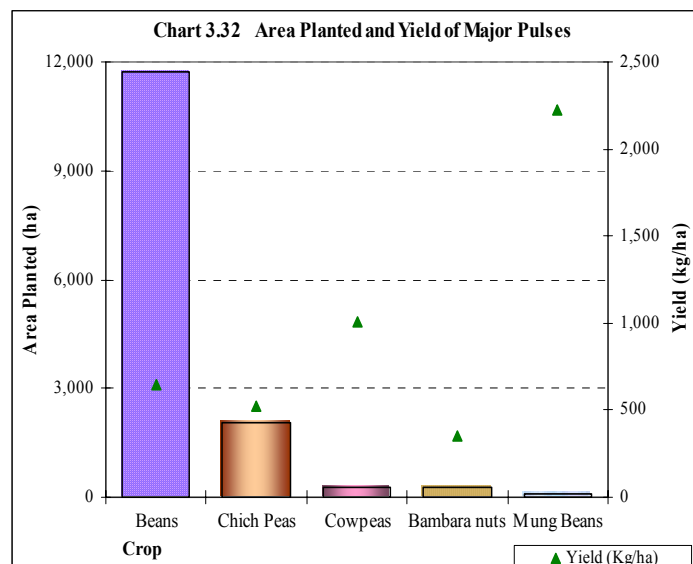

The district with the largest planted area with sweet potatoes was Musoma Rural (7,458 ha, 44.9%), followed by Tarime (4,347 ha, 26.2%), Bunda (2,633 ha, 15.8%), Serengeti (2,119 ha, 12.7%) and Musoma Urban (63 ha, 0.4%).

However, the largest planted area per sweet potato growing household during the long rainy season was found in Serengeti (0.27 ha), followed by Musoma Rural (0.26 ha), Tarime (0.22 ha), Bunda (0.200 ha), and Musoma Urban (0.19ha) (Chart 3.31).

**3.3.6 Pulse Crops Production**

The total area planted with pulses was 14,438 hectares out of which 11,726 ha were planted with beans (81.2 percent of the total area planted with pulses), followed by chick peas (2,070 ha, 14.3%), cowpeas (278 ha, 1.9%), bambaranuts (256 ha, 1.8%) and mung beans (108 ha, 0.7%)(Chart 3.32).

The area planted with pulses in the short rainy season was 6,799 ha which represented 47.1 percent of total area planted with pulses during the year. Beans were the dominant pulse crop grown during the short rainy

season with 6,383 ha (93.9 % of the total area planted with pulses in that particular season), followed by chick peas (186 ha, 2.7%), bambaranuts (134 ha, 2.0%) and cowpeas (97 ha, 1.4%). Mung beans were not grown in the short rainy season.

Beans were also the dominant pulse crop grown during the long rainy season in Mara region (Table 3.4).

**Table 3.4: Area, Quantity and Yield of Pulses by Season**

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area Planted (ha)	Quantity Harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (Kg/ha)	Area Planted (ha)	Quantity Harvested (tons)	Yield (Kg/ha)
Mung Beans	0	0	0	108	240	2,223	108	240	2,223
Beans	6,383	4,093	641	5,343	3,519	659	11,726	7,612	649
Cowpeas	97	22	228	181	258	1,425	278	280	1,008
Chich Peas	186	123	661	1,884	950	504	2,070	1,073	518
Bambaranuts	134	57	430	122	33	266	256	90	351
<b>Total</b>	<b>6,799</b>	<b>4,295</b>		<b>7,639</b>	<b>4,999</b>		<b>14,438</b>	<b>9,295</b>	

The total production of pulses was 9,295 tonnes. Beans were the most cultivated crop producing 7,612 tonnes which accounted for 82 percent of the total pulse production. This was followed by chick peas (1,073t, 12%), cow peas (280t, 3%), mung beans (240t, 2.6%) and bambara nuts (90t, 1.0%). The yield for mung beans is very high and this may be the results of the small number of observations involved, however cow peas had a relatively high yields of 1,008 kgs/ha. The yields of the rest of the pulses in kilograms per hectare were beans 649 kgs/ha, chick peas 518 kgs/ha and bambara nuts 351 kgs/ha. (Table 3.4)

### 3.3.6.1 Beans

Beans dominated the production of pulse crops in the region. The number of households growing beans in Mara region during the long rainy season was 20,683. The total production of beans in the region was 7,612 tonnes from a planted area of 11,726 hectares resulting in a yield of 0.65 t/ha.

The largest planted area with beans in the region was in Musoma Rural district (4,173 ha, 35.6%), followed by Bunda (2,974 ha, 25.4%), Serengeti (2,538 ha, 21.6%), Tarime (2,035 ha, 17.4%) and Musoma Urban (6 ha, 0.05%) (Chart 3.33 and Map 3.17).

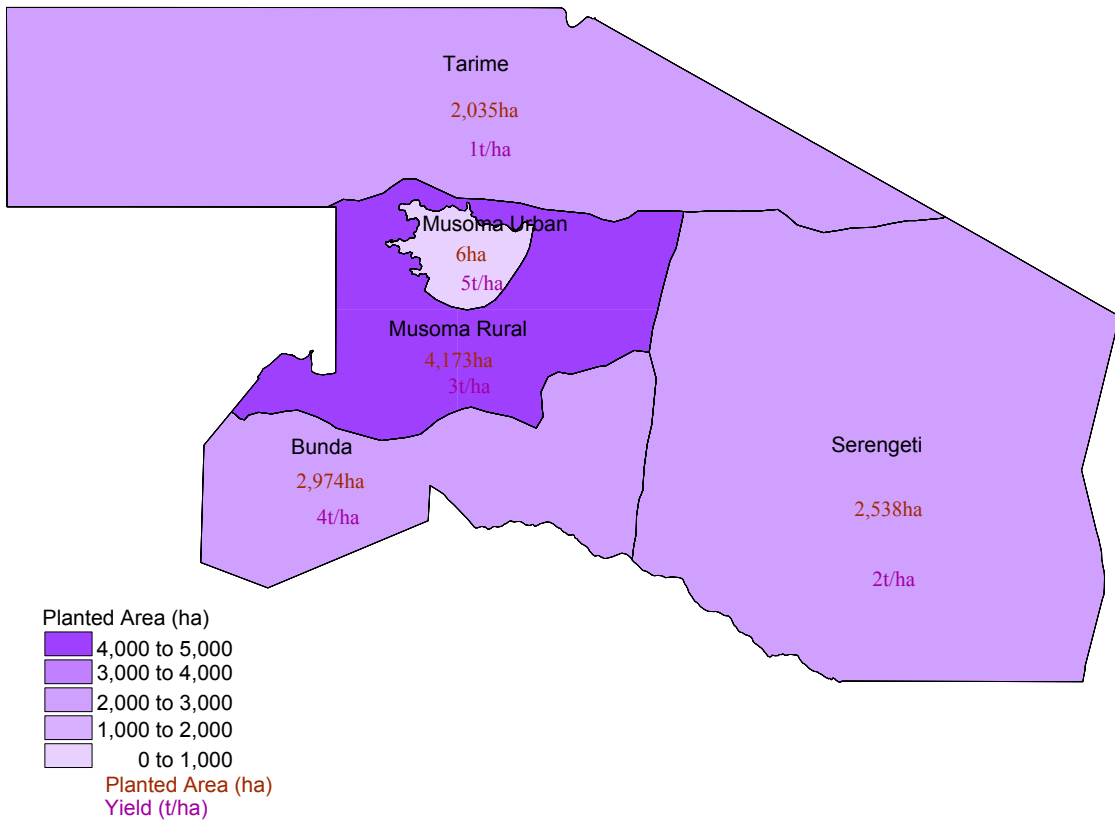

The average area planted per household in the region during the long rainy season was 0.26 ha.

However, there were great variations in the area planted with beans per household among the districts ranging from 0.47 ha in Serengeti district to 0.15 ha in Musoma Urban district.

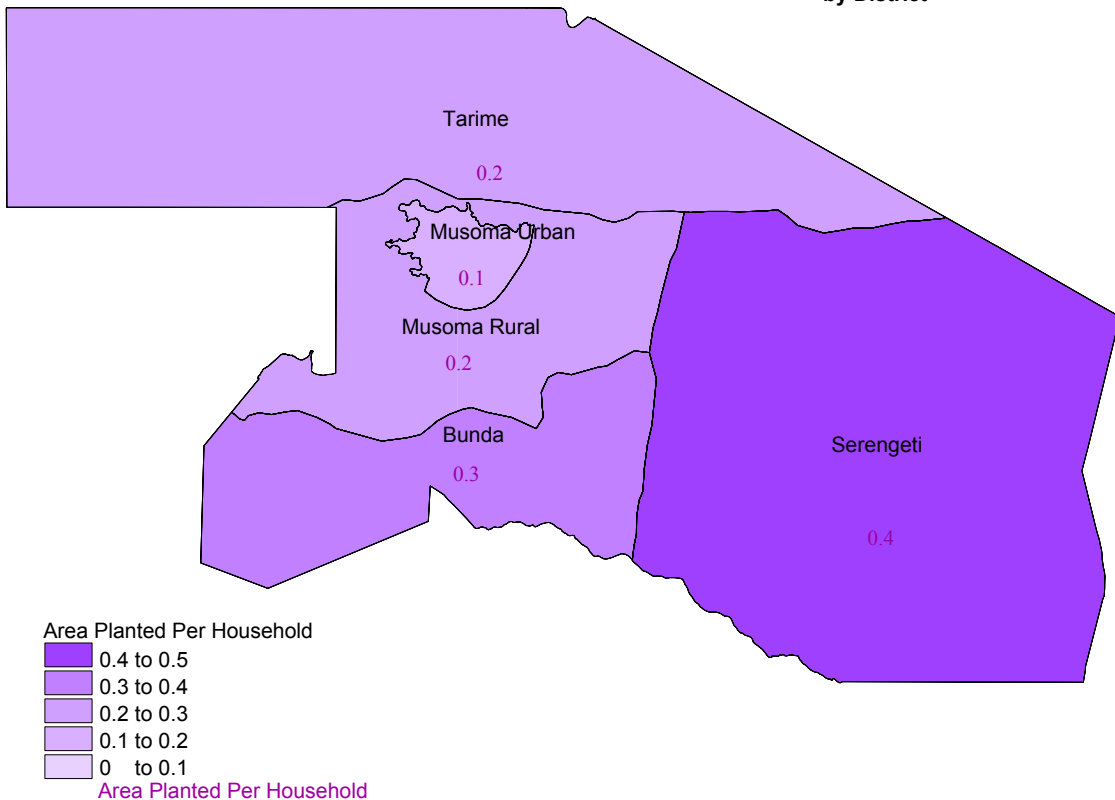

The district with the largest area planted with beans per household was Serengeti (0.47 ha), followed by Bunda (0.33 ha), Musoma Rural (0.21 ha), Tarime (0.19 ha) and Musoma Urban (0.15 ha) (Chart 3.34 and Map 3.18).

**MAP 3.17 MARA**  
**Planted Area and Yield of Beans**  
**by District**

**MAP 3.18 MARA**  
**Area Planted Per Beans**  
**Growing Household**  
**by District**

Apart from a large increase in the quantity of beans produced in the region during 1997/98, there has been a gradual increase in production from 2,000 tonnes in 1994 to 8,000 tonnes in 2003. The reason for the peak in 1997/98 may be due to the El - Nino or it may be the result of the sampling technique used that year (Chart 3.35).

The area planted with beans increased sharply over the period from 1995 to 1997 and has remained constant up to the year 2000. The planted area has declined slightly over the period 2000 to 2003 (Chart 3.36).

**3.3.7 Oil Seed Production**

The total production of oilseed crops was 1,459 tonnes planted on an area of 1,572 hectares. The total planted area with oilseeds in the long rainy season was 695 ha representing 44.2 percent of the total area planted with oil seeds.

**Table 3.5: Area, Quantity Harvested and Yield of Oil Seed Crops by Season**

Crop	Short Rainy Season			Long Rainy Season			Total		
	Area Planted (ha)	Quantity Harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (Kg/ha)	Area Planted (ha)	Quantity Harvested (tons)	Yield (Kg/ha)
Sunflower	21	7	346	0	0	0	21	7	346
Simsim	73	21	293	103	27	262	176	48	275
Groundnuts	761	797	1,047	577	555	964	1,337	1,352	1,011
Soya Beans	22	27	1,235	16	24	1,482	38	51	1,341
<b>Total</b>	<b>877</b>	<b>853</b>		<b>695</b>	<b>607</b>		<b>1,572</b>	<b>1,459</b>	

Groundnuts were the most important oilseed crop with 1,337 ha (85.0% of the total area planted with oil seeds), followed by simsim (176 ha, 11.2%), soya beans (38 ha, 2.4%) and sunflower (21 ha, 1.3%). The yield of soya beans was high (1,341 kg/ha), that of groundnuts was 1,011 kg/ha, for sunflower it was 346 kg/ha) and for simsim it was 275 kg/ha (Chart 3.37).

The production of groundnut was 1,352 tonnes accounting for 92.7 percent of the total production of oil seeds, followed by soya beans (57 ha, 3.5%), simsim (48 ha, 3.3%) and sunflower (7 ha, 0.5%). (Table 3.5)

**Groundnuts**

The number of households growing groundnuts in Mara region during the short rainy season was only 1,978. The total production of groundnuts in the region was 1,352 tonnes from a planted area of 1,337 hectares resulting in a yield of 1.0 t/ha.

With exception of the year 1997 and 2003 in which the area planted were 1,571 and 1,337 hectares respectively, the area planted with groundnut from 1995 to 2003 in Mara region has remained almost constant at around 650 hectares (Chart 3.38).

Fourty percent of the area planted with groundnuts was located in Musoma Rural district (539 ha) followed by Bunda (361ha, 27.0%), Tarime (332 ha, 24.8%), Serengeti (105 ha, 7.8%) and Musoma Urban (1 ha, 0.05%) (Map 3.19). The district with the highest proportion of land for groundnuts was Tarime, followed by Serengeti, Musoma Rural, Bunda and Musoma Urban (Chart 3.39 and Map 3.19).

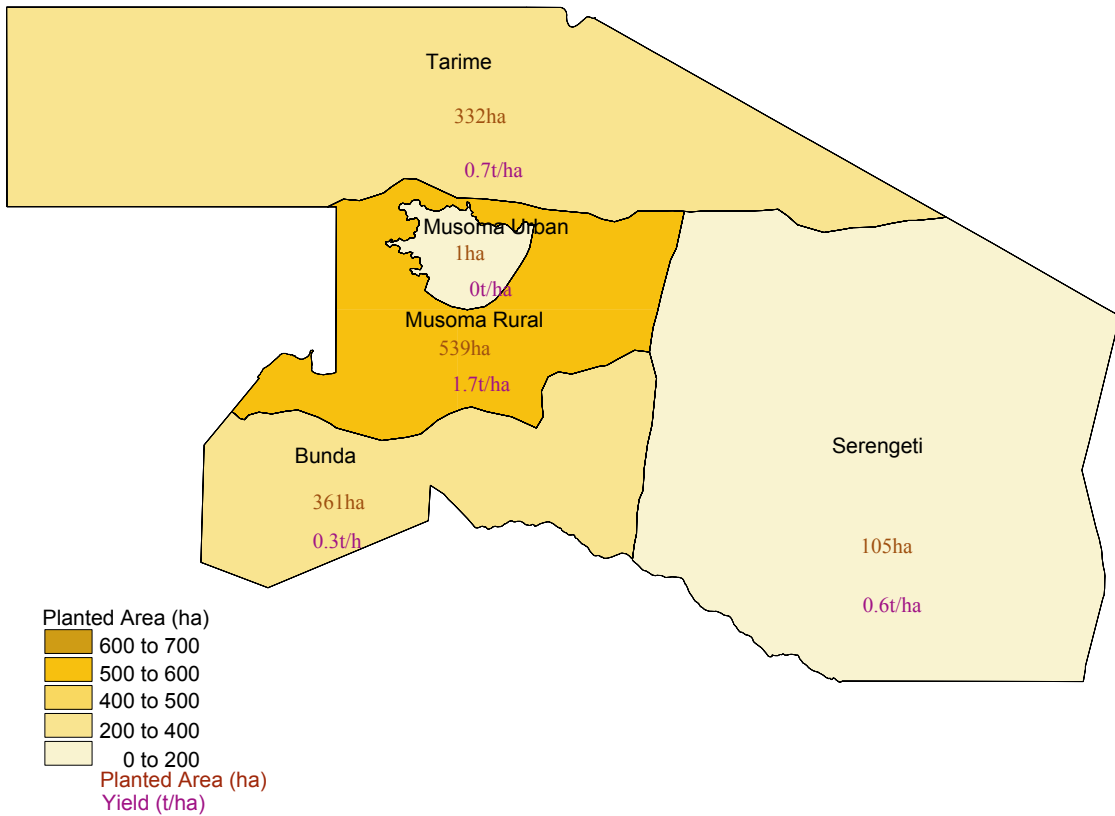

The area planted per groundnut growing household was largest in Musoma Rural district (0.42 ha) and the lowest in Bunda (0.00). The planted area with groundnuts per housegold in other districts range from 0.34 ha in Tarime to 0.23 ha in Serengeti and 0.10 ha in Musoma Urban (Chart 3.40 and Map 3.20).

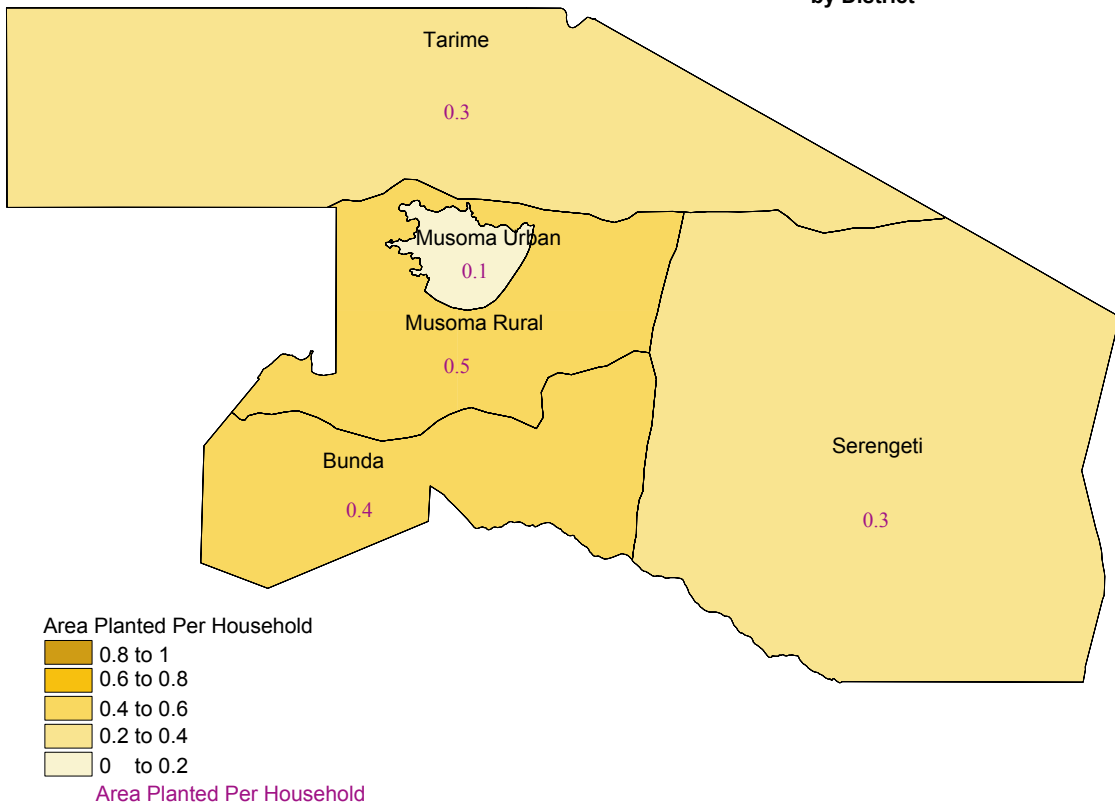

**3.3.8 Fruits and Vegetables**

The collection of fruit and vegetable production data was difficult due to the small quantities produced per household. Most of the data presented here gives the production of small holders who grew these crops as cash crops and not merely for household consumption. Most fruit production is from permanent crops. Both short and long rainy seasons are almost equally important in fruit and vegetable production. While 43 percent of the total planted area with fruits and vegetables was found in the short rainy season, 57 percent was in the long rainy season. While 100 percent of the planted area for bitter aubergine, garlic, cucumber and water mellon was produced during the short rainy season, 100 percent of ginger was produced during the long rainy season. The rest of the fruit and vegetables were produced in both seasons. Reliable historical data for time series analysis of fruit and vegetables were not available

**MAP 3.19 MARA  
Planted Area and Yield of Groundnuts  
by District**

**MAP 3.20 MARA  
Area Planted per Groundnuts  
Growing Household  
by District**

The total production of fruits and vegetables was 6,981 tonnes. The most cultivated fruit and vegetable crop was the tomato with a production of 3,801 tonnes (54% of the total fruits and vegetables produced), followed by cabbage (1,683t, 24%) and onions (906t, 13%). The production of the other fruit and vegetable crops was relatively small (Table 3.6).

**Table 3.6: Area, Production and Yield of Fruits and Vegetables by Season**

Crop	Short Rainy season			Long Rainy season			Total		
	Area Planted (ha)	Quantity Harvested (tons)	Yield (kg/ha)	Area Planted (ha)	Quantity harvested (tons)	Yield (Kg/ha)	Area Planted (ha)	Quantity Harvested (tons)	Yield (Kg/ha)
Bitter Aubergine	16	16	988	0	0	0	16	16	988
Garlic	27	0	0	0	0	0	27	0	0
Onions	95	362	3,829	152	544	3,578	247	907	3,674
Cabbage	123	333	2,702	257	1,350	5,249	381	1,683	4,423
Tomatoes	479	1,603	3,346	603	2,198	3,647	1,082	3,801	3,514
Spinnach	53	48	889	58	49	853	111	97	871
Amaranths	57	51	896	59	228	3,857	116	279	2,404
Pumpkins	12	1	59	12	2	158	24	3	109
Cucumber	24	24	1,039	0	0	0	24	24	1,039
Water Mellon	29	37	1,263	0	0	0	29	37	1,263
Ginger	0	0	0	54	135	2,470	54	135	2,470
<b>Total</b>	<b>915</b>	<b>2,475</b>		<b>1,195</b>	<b>4,506</b>		<b>2,110</b>	<b>6,981</b>	

Cabbage had a yield of 4,423 kg/ha, onions 3,674 kg/ha, tomatoes 3,514 kg/ha and ginger 2,470 kg/ha. Spinnach and pumpkins had yields of 871 and 109 kg/ha respectively (Chart 3.41 and Table 3.6).

**Tomatoes**

The number of households growing tomatoes in the region during the long rainy season was 3,662 which represent 2.9 percent of the total crop growing households in the region during the long rainy season.

Tarime district had the largest planted area of tomatoes (49.2% of the total area planted with tomatoes in the region), followed by Musoma Rural (21.4%), Serengeti (21.3%), Bunda (7.1%) and Musoma Urban (1.0%) (Chart 3.42 and Map 3.21)

The proportion of total planted area with tomatoes in the region was very high in Musoma Urban district and this is probably the result of the small number of observations involved, however when compared with other districts in the region, Tarime had a relatively high proportion of its total planted area with tomatoes. This is followed by Serengeti, Musoma Rural and Bunda (Chart 3.42).

The district with the largest planted area per tomato growing household was in Musoma Urban district (0.24 ha), followed by Tarime (0.20 ha), Serengeti (0.19 ha), Musoma Rural (0.12 ha) and Bunda (0.10 ha) (Chart 3.43

and Map 3.22). The total area planted with tomatoes accounted for 0.3 percent of the total area planted with annual crops and vegetables during the short and long rainy seasons.

**Cabbage**

The number of households growing cabbages in the region during the long rainy season was 1,491 and 1,008 in the short rainy season. This represented 1.2 percent of the total crop growing households in the region in the long rainy season and 0.8 percent in the short rainy season.

Tarime district had the largest planted area of cabbage (196 ha, 51.4% of the total area planted with cabbage in the region), followed by Musoma Rural (92 ha, 24.3%), Bunda (51 ha, 13.4%), Serengeti (41 ha, 10.7%) and Musoma Urban (1 ha, 0.2%) (Chart 3.44 and Map 3.23 and 3.24). The total area planted with cabbages accounted for 0.1 percent of the total area planted with annual crops and vegetables during the short and long rainy seasons.

**Onions**

The number of households growing onions in the region during the long rainy season was 1,010 households and 538 in the short rainy season. This represented 0.81 percent of the total crop growing households in the region in the long rainy season and 0.42 percent in the short rainy season. Tarime district had the largest planted area of onions (189 ha, 76.5% of the total area planted with onions in the region), followed by Serengeti (31 ha, 12.5%), Bunda (15 ha, 6.3%) and Musoma Rural (12 ha, 4.7%). There was no onion production in Musoma Urban district (Map 3.25 and 3.26).

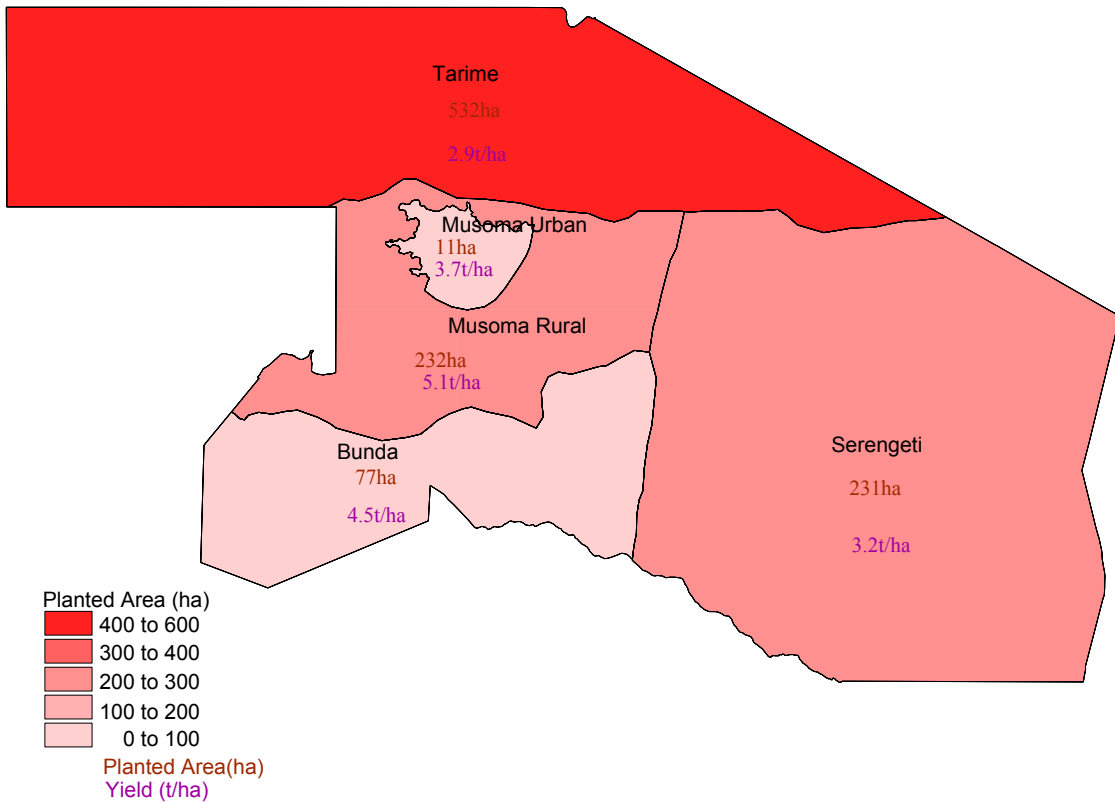

The total area planted with onions accounted for 0.07 percent of the total area planted with annual crops and vegetables during the short and long rainy seasons.

**3.3.9 Other Annual Crop Production**

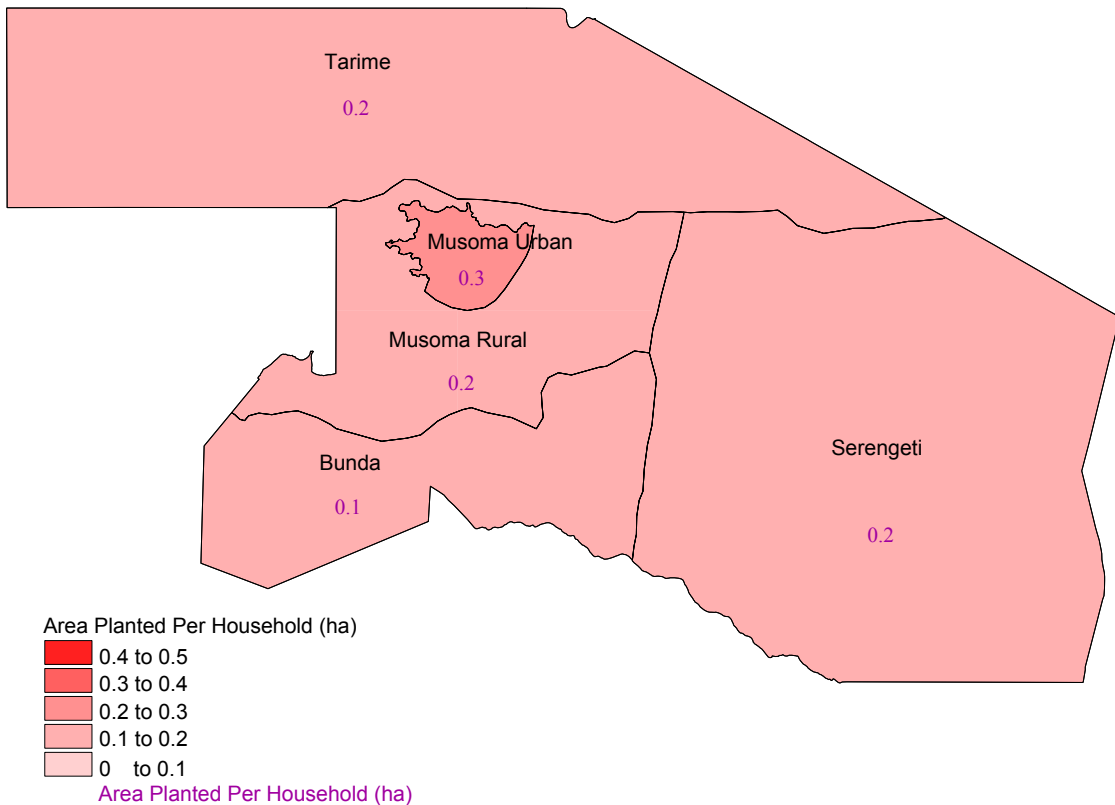

Most of the other annual crops are cash crops. An area of 20,587 ha was planted with other annual crops mainly cotton and tobacco representing 6.2 percent of total planted area in the region. The area planted with annual cash crops in the short rainy season was 18,628 ha which represents 15.5 percent of the total area planted with annual crops in short rainy season. The area planted with annual cash crops in long rainy season was 1,959 ha representing 0.9 percent of the total area planted with annual crops during the long rainy season

**Planted Area and Yield of Onions**  
**by District**

**MAP 3.26 MARA**  
**Area Planted Per Onions Growing**  
**Household by District**

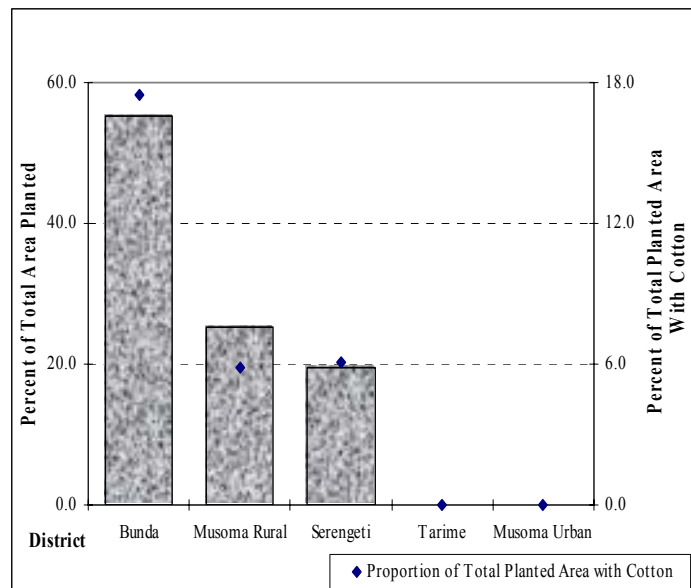

**Cotton**

The quantity of cotton produced was 14,191 tonnes. Cotton had a total planted area of 20,342 ha (18,443 and 1,899 ha planted during short and long rainy seasons respectively). Cotton production is concentrated in 3 districts with Bunda having the largest planted area (55.3% of total area planted with cotton in the region), followed by Musoma Rural (25.2%) and Serengeti (19.5%) (Chart 3.47 Map 3.27 and 3.28).

**Tobacco**

Only 93 tonnes of tobacco were produced in Mara region from a planted area of 244 ha and virtually all of it was produced during the short rainy season. The crop

is grown in Tarime, Musoma Rural and Serengeti districts (Map 3.29). The district with the largest planted area per household was Musoma Rural (0.8 ha), followed by Tarime (0.3 ha) and Serengeti (0.1 ha) (Map 3.30).

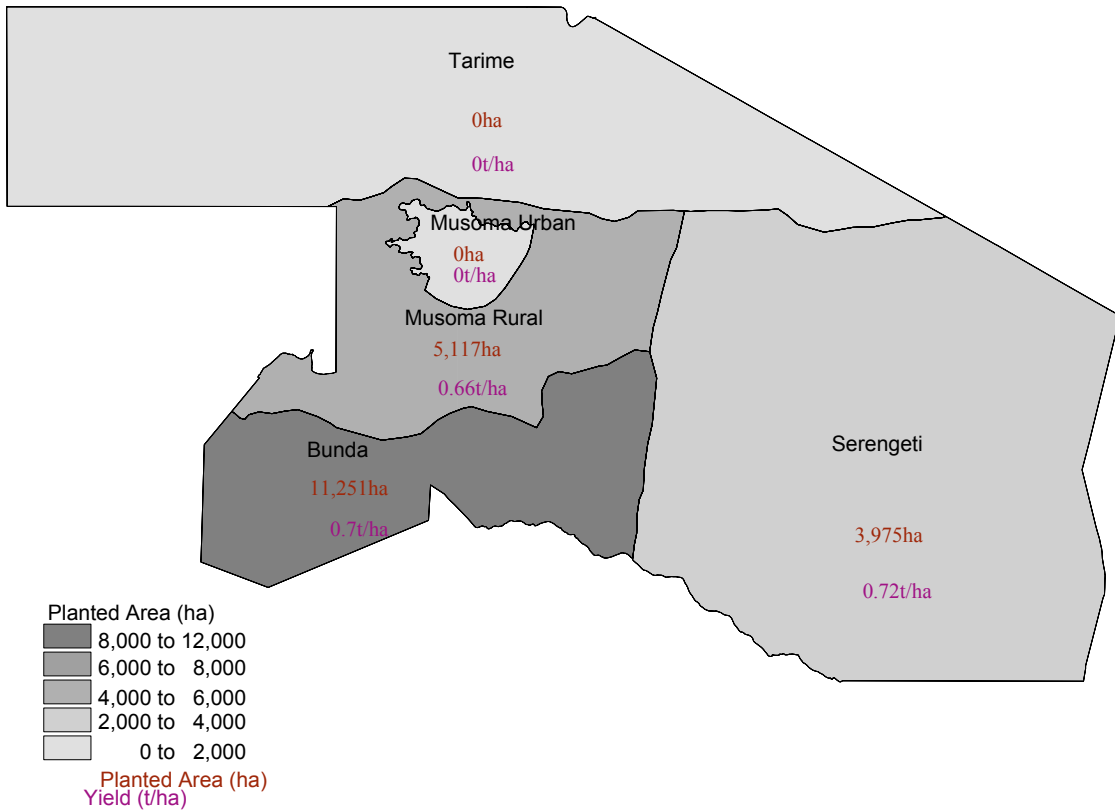

**3.4 Permanent Crops**

Permanent crops (sometimes referred as perennial crops) are crops that normally take over a year to mature and once mature can be harvest for a number of years. For most crops, it is easy to determine if they are annual or permanent. However, for crops like cassava and bananas the distinction is not so clear. Cassava has varieties that mature within a year and produces only one harvest, whilst other varieties survive for more than one year and produce several harvests. In this census, cassava was treated as an annual crop. Conversely, bananas normally take less than a year to mature, survive for more than one year and are thus treated as a permanent crops. In this report the agriculture census results are presented for the most important permanent crops in terms of area planted, production and yield. Previous censuses and surveys did not measure these variables for permanent crops, therefore no time series analysis is made in this section.

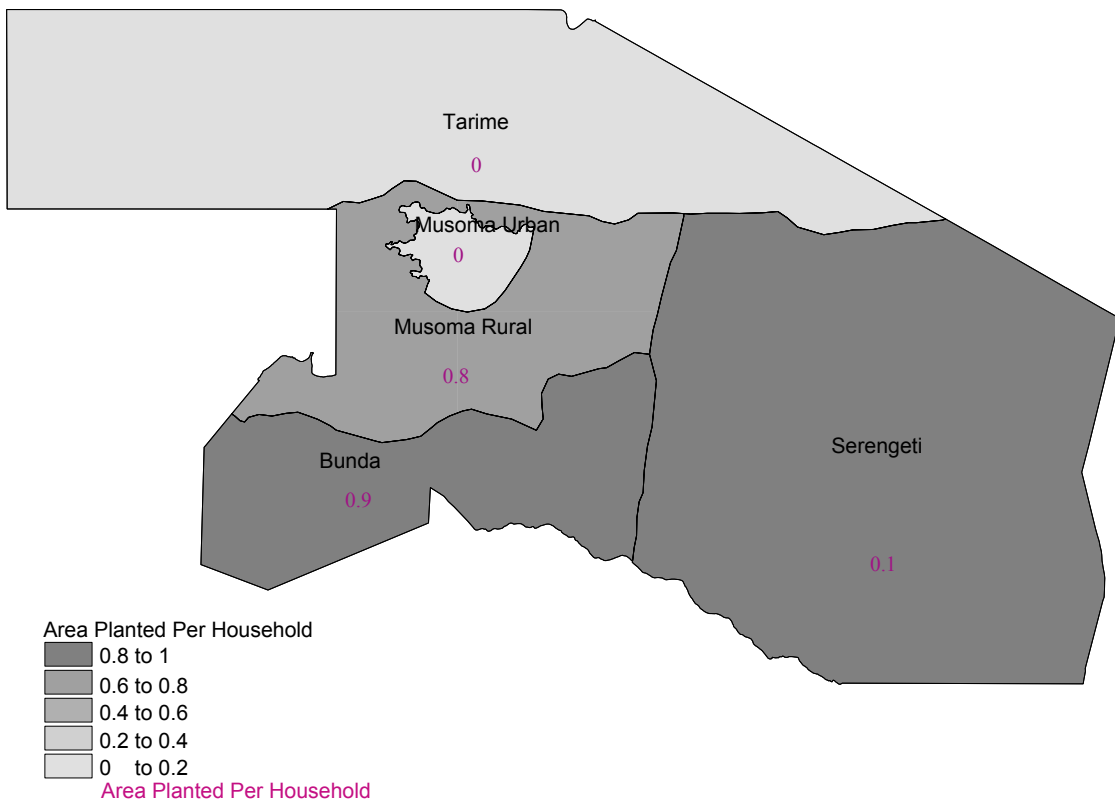

The smallholder planted area of permanent crops was 16,835 hectares (5% of the total plated area of annual and permanent crops in the region). However, the area planted with annual crops is not the actual physical land area as it includes the area of annual crops planted more than once on the same land, whilst the planted area for permanent crops is the same as physical planted land area. So the percentage area planted with permanent crops would be higher than indicated in Chart 3.48.

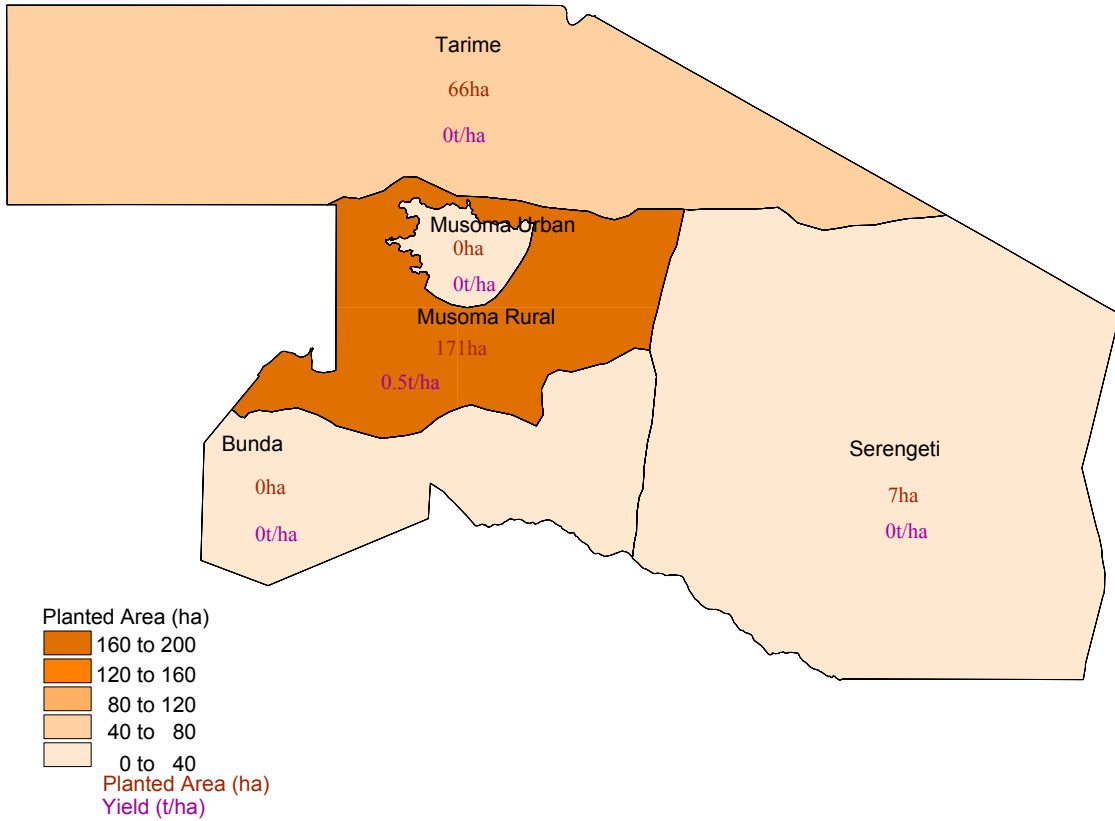

**MAP 3.27 MARA**  
**Planted Area and Yield of Cotton**  
**by District**

**Area Planted per Cotton Growing**  
**Household by District**

**MAP 3.29 MARA**  
**Planted Area and Yield of Tobacco**  
**by District**

**MAP 3.30 MARA**  
**Area Planted Per Tobacco Growing**  
**Households by District**

The most important permanent crop in Mara region was banana which had a planted area of 4,376 ha (27% of the planted area with permanent crops), followed by coffee (3,771 ha, 22%), pomelo (3,328 ha, 20%)<sup>2</sup>, mango (1,701 ha, 10%), orange (1,169 ha, 7%), pawpaw (991 ha, 6%) and sugarcane (383 ha, 2%). Each of the remaining permanent crops had an area of less than 2 percent of the total area planted with permanent crops in Mara region (Chart 3.49).

Tarime district had the largest area under smallholder permanent crops (12,727 ha, 76%). This was followed by Serengeti (1,399 ha, 8%), Bunda (1,248 ha, 7%), Musoma Rural (1,056 ha, 6%) and Musoma Urban (405 ha, 2%). Musoma Urban had the largest planted area per permanent crop growing household (1.96 ha), however this may have resulted from the small number of observations. This is followed by Bunda (0.68 ha), Tarime (0.46 ha), Serengeti (0.20 ha) and Musoma Rural (0.05 ha) (Chart 3.50).

In terms of planted area of permanent crops expressed as a percentage of the total area planted with crops, Musoma Urban had the highest percent (35.6%), followed by Tarime (9.9%), Serengeti (2.1%), Bunda (1.9%) and Musoma Rural (1.2%).

### 3.4.1 Banana

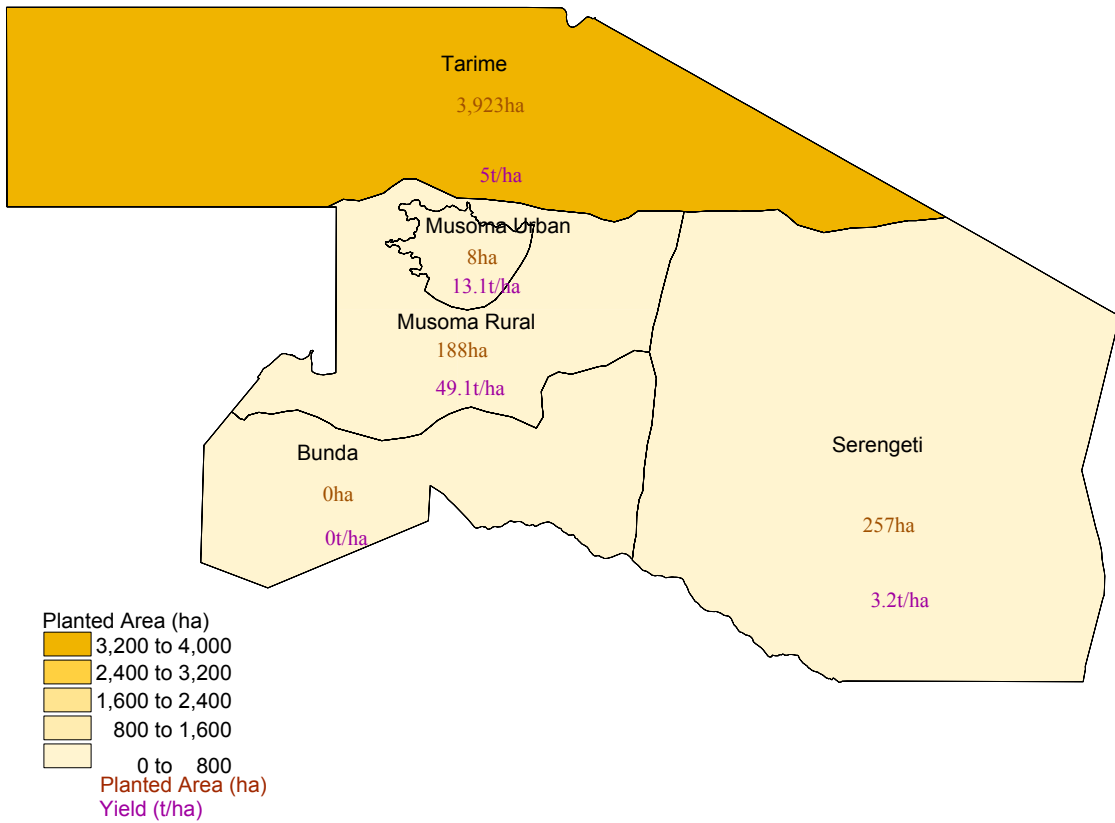

The total production of banana by smallholders was 12,953 tonnes. Banana was the most important permanent crop grown by smallholders in the region. They were grown by 13,118 households (7.1% of the total crop growing households). The average planted area per banana growing household was relatively small (0.33 ha per banana growing household) and the average yield obtained by smallholders was 5.25 t/ha from a harvest area of 2,467 hectares.

Tarime had the largest area of bananas in the region (3,923 ha, 89.7%), followed by Serengeti (257 ha, 5.9%), Musoma Rural (188 ha, 4.3%) and Musoma Urban (8 ha, 0.2%). There was no banana production in Bunda district (Map 3.31). Although the average area planted with banana per banana growing household was highest in Musoma Urban (0.6 ha), caution must be taken in using these figures because of the small number of observations involved. This is followed by Tarime (0.4 ha), Serengeti (0.3 ha) and Musoma Rural (0.1 ha) (Chart 3.51 Map 3.32).

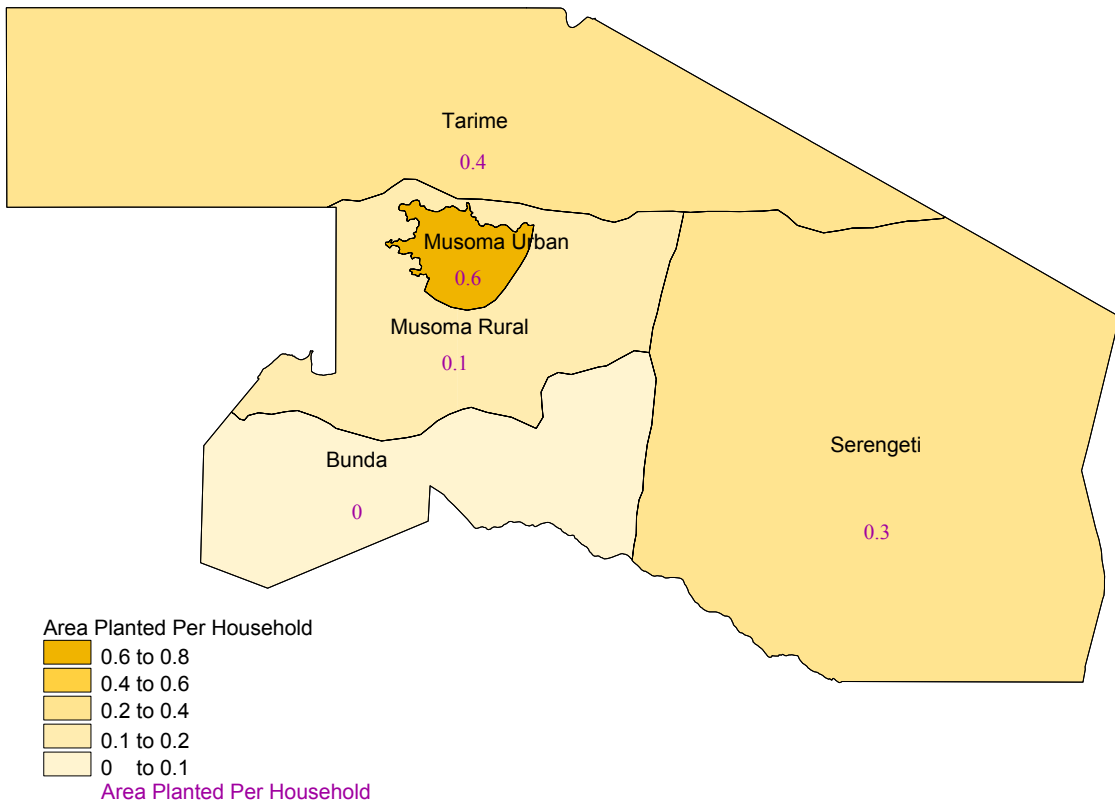

<sup>2</sup> The data for pomello seems to be very high and unrepresentative of the situation found at field level. It is therefore not considered an important crop in the region and will not be analysed separately in the following sections.

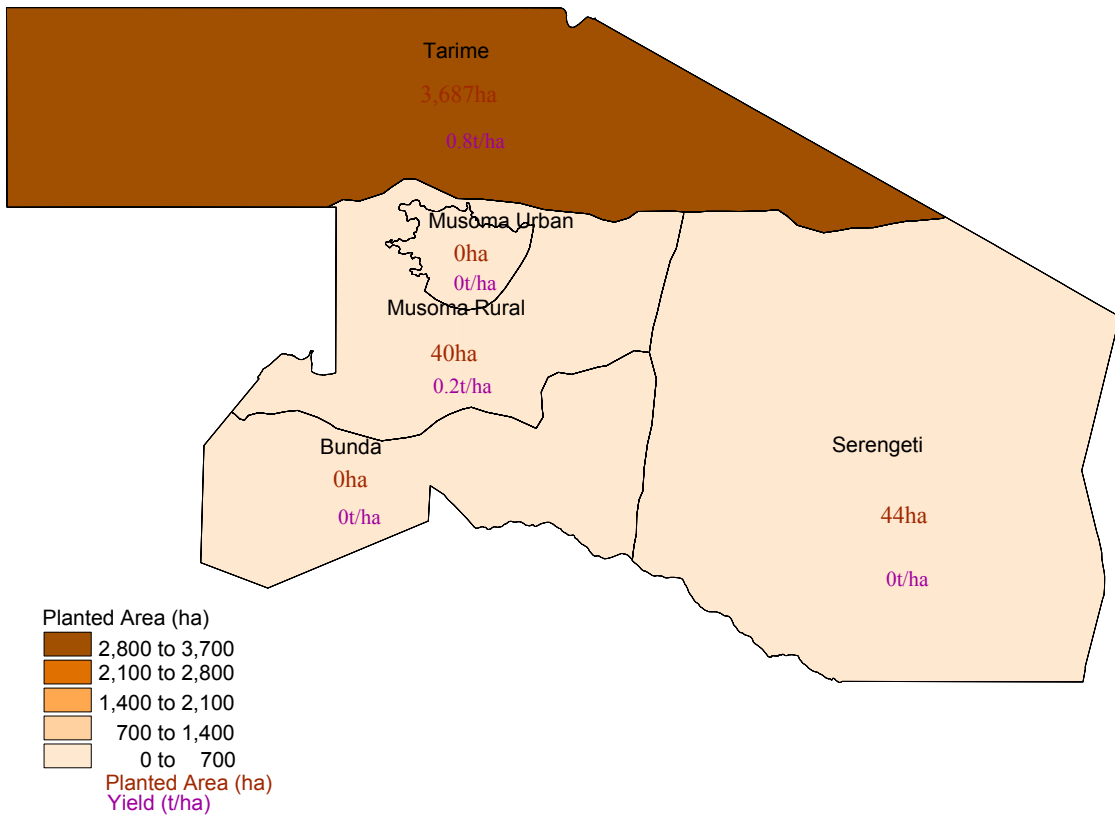

**MAP 3.31 MARA**

### 3.4.2 Coffee

The total production of coffee by smallholders was 2,246 tonnes. In terms of area planted, coffee was the second most important permanent crop, grown by smallholders in the region. It was grown by 7,581 households (4.1% of the total crop growing households). The average area planted with coffee per household was relatively small at around 0.50 ha per coffee growing household and the average yield obtained by smallholders was 820 kg/ha from a harvest area of 2,738 hectares.

Tarime had the largest area of coffee in the region (3,687 ha, 97.8%), followed by Serengeti (44 ha, 1.2%) and Musoma Rural (40 ha, 1.1%) (Map 3.33). The average area planted with coffee per coffee planting household was highest in Tarime (0.52 ha), followed by Serengeti (0.31 ha) and Musoma Rural (0.12 ha) (Chart 3.52). There was no coffee production in Bunda and Musoma Urban districts (Chart 3.52 and Map 34).

### 3.4.3 Mango

The total production of mango by smallholders was 5,573 tonnes. In terms of area planted, mango was the third most important permanent crop grown by smallholders in the region. It was grown by 10,065 households (5.4% of the total crop growing households). The average area planted with mango per household was relatively small (0.17 ha per mango growing household) and the average yield obtained by smallholders was 22.4 t/ha from a harvest area of 249 hectares.

Musoma Rural district had the largest area of mango in the region (531 ha, 31.2%), followed by Tarime (428 ha, 25.2%), Bunda (348 ha, 20.5%), Musoma Urban (317 ha, 18.6%) and Serengeti (78 ha, 4.6%) (Map 3.35). The average area planted per mango growing household was highest in Musoma Urban (2.6 ha), followed by Bunda (0.64 ha), Tarime (0.21 ha), Musoma Rural (0.09 ha) and Serengeti (0.06 ha) (Chart 3.53 and Map 3.36).

### 3.4.4 Orange

The total production of orange by smallholders was 3,854 tonnes. In terms of area planted, orange was the fourth most important permanent crop grown by smallholders in the region. It was grown by 6,978 households (3.8% of the total crop growing households). The average area planted with orange per household was relatively small at around 0.16 ha per orange growing household and the average yield obtained by smallholders was 6.3 t/ha from a harvested area of 613 hectares.

Serengeti had the largest planted area of orange in the region (677 ha, 57.9%), followed by Tarime (318 ha, 27.2%), Musoma Rural (113 ha, 9.6%), Bunda (60 ha, 5.1%) and Musoma Urban (2 ha, 0.1%) (Map 3.37). The area planted with orange per orange growing household was highest in Serengeti (0.41 ha), followed by Tarime (0.18 ha) and Bunda (0.16 ha). Musoma Rural had the smallest area planted with orange per orange growing household (Chart 3.54 and Map 3.38).

### 3.5 Inputs/Implements Use

#### 3.5.1 Methods of Land Clearing

Land clearing is a common pre-tillage operation practiced by most farmers in Mara region. Land clearing is divided into two

categories: bush clearing, which by definition implies either expansion into virgin areas or into areas which have been left fallow for a long period. The other category, which includes burning, hand slashing or tractor slashing, is normally an annual clearing

**Table 3.7 Number of Households and planted Area during the Long and Short Rainy Seasons by Land Clearing Methods**

Method of Land Clearing	Short Rainy Season			Long Rainy Season			Total		
	Number of Households	Area Planted (ha)	%	Number of Households	Area Planted (ha)	%	Number of Households	Area Planted (ha)	%
Mostly Hand Slashing	101,696	94,207	78.3	103,754	82,625	84.2	205,450	176,831	80.9
No Land Clearing	19,893	20,119	16.7	15,892	11,530	11.7	35,785	31,649	14.5
Mostly Bush Clearance	3,819	4,302	3.6	3,327	2,737	2.8	7,146	7,039	3.2
Mostly Burning	1,162	1,112	0.9	1,049	1,019	1.0	2,210	2,250	1.0
Mostly Tractor Slashing	518	28	0.4	385	272	0.3	903	800	0.4
<b>Total</b>	<b>127,087</b>	<b>120,270</b>	<b>100.0</b>	<b>124,407</b>	<b>98,183</b>	<b>100.0</b>	<b>251,494</b>	<b>218,452</b>	<b>100.0</b>

exercise to remove vegetation growth from the previous season. Hand slashing is the most widespread method used for land clearing. The area cleared by hand slashing in Mara region during the long rainy season was 82,625 ha which represents 84.2 percent of the total planted area. Bush clearance, burning and tractor slashing are less important methods for land clearing and they represent 3.2, 1.0 and 0.4 percent respectively (Chart 3.55 and Table 3.7).

#### 3.5.2 Methods of Soil Preparation

Ox-ploughing was the most used method of soil preparation as was used on an area of 144,920 ha which represented 66 percent of the total area cultivated, followed by hand hoe cultivation (71,848 ha, 33%) and tractor ploughing (1,711 ha, 1%) (Chart 3.56). More ox-ploughing was used during long rainy season with 70 percent of the planted area cultivated using that method against 63 percent for the planted area in the short

rainy season. The use of tractor for cultivation in the region during the short rainy season was the same as that of the long rainy season.

In Mara region, Tarime district had the largest planted area cultivated using oxen (60,822 hectares, 42.0%), followed by Serengeti (31,649 ha, 21.8%), Bunda (27,003 ha, 18.6%) and Musoma Rural (25,445 ha, 17.6%). There was no planted area cultivated using oxen in Musoma Urban district (Chart 3.57).

During the long rainy season, 85.1 percent of the total area cultivated using oxen was planted with cereals, followed by pulses (6.3%), roots and tubers (5.2%), cash crops (1.6%), fruit & vegetables (1.1%) and oil seeds (0.7%).

**3.5.3 Improved Seeds Use**

The total planted area using improved seeds was 50,862 ha which represents 15 percent of the total area planted with the annual crops and vegetables. The percentage use of improved seed in the short rainy season was 27 percent, much higher than the corresponding percentage use for the long rainy season (8.6%). Cereals had the largest planted area with improved seeds (25,401 ha, 49.9% of the planted area with improved seeds), followed by cash crops (19,088 ha, 37.5%), roots and tubers (2,800 ha, 5.5%), fruit and vegetables (1,767 ha, 3.5%), pulses (1,734 ha, 3.4%) and oil seed (72 ha, 0.1%) (Chart 3.59). However, the use of

improved seeds in cash crops and fruit & vegetables is much greater than in other crop types (92.7%). Improved seeds were used on only 2.1 percent of the planted area with roots and tubers and 4.6 percent of planted area of oil seeds (Chart 3.60).

**3.5.4 Fertilizer Use**

The use of fertilisers on annual crops was very small with a planted area of only 57,423 ha (17.2% of the total annual crops planted area in the region). The planted area without fertiliser for annual crops was 276,102 hectares representing 82.8 percent of the total planted area with annual crops. Of the planted area with fertiliser application, farm yard manure was applied on 47,972 ha representing 14.4 percent of the total planted area (83.5% of the planted area with fertiliser application in the region). This was followed by compost (6,719 ha, 2%). Inorganic fertilizers were used on a very small area which represents only 4.7 percent of the area planted with fertilizers (Chart 3.61).

The highest percentage of the area planted with fertilizer (all types) was in Tarime district (47.8%), followed by Musoma Rural (24.3%), Bunda (15.4%), Serengeti (12.4%) and Musoma Urban (0.1%) (Chart 3.62 and Table 3.8). Most annual crop growing households do not use any fertiliser (Approximately 1478,477 households, 79%) (Map 3.39).

**Table 3.8 Planted Area by Type of Fertiliser Use and District - Short and Long Rainy Season**

District	Fertilizer Use				No Fertilizer Applied
	Mostly Farm Yard Manure	Mostly Compost	Mostly Inorganic Fertilizer	Total	
Tarime	23,258	1,895	2,306	27,459	87,871
Serengeti	6,678	301	149	7,127	58,038
Musoma Rural	12,668	1,092	178	13,938	74,086
Bunda	5,312	3,431	93	8,836	55,436
Musoma Urban	56	0	7	63	670
<b>Total</b>	<b>47,972</b>	<b>6,719</b>	<b>2,732</b>	<b>57,423</b>	<b>276,102</b>

**Table 3.9 Number of Crop Growing Households and Planted Area by Type of Fertiliser Use - Long Rainy Season**

The percentage of the planted area with applied fertilizer was highest for fruit and vegetables (70.7% of the area planted with these fruit and vegetables during the long rainy season had an application of fertilizers). This was followed by cereals (23.4%), oil seeds (13.9%), pulses (12.9%), roots and tubers (10.4%) and cash crops (7.2%) (Table 3.9).

District	Fertilizer Use							
	Mostly Farm Yard Manure		Mostly Compost		Mostly Inorganic Fertilizer		No Fertilizer Applied	Total
	Number of House-holds	Planted Area (ha)	Number of House-holds	Planted Area (ha)	Number of House-holds	Planted Area (ha)		
Cereals	27,743	14,736	3,568	2,271	1,938	1,032	59,049	77,087
Roots & Tubers	12,381	10,626	3,000	1,813	1,012	587	111,653	124,679
Pulses	2,397	755	519	117	547	110	6,657	7,639
Oil Seeds	341	80	0	0	135	16	599	695
Fruit & Vegetables	4,430	729	0	0	573	116	350	1,195
Cash Crops	232	141	0	0	0	.	1,818	1,959
<b>Total</b>	<b>47,523</b>	<b>27,067</b>	<b>7,087</b>	<b>4,201</b>	<b>4,205</b>	<b>1,861</b>	<b>180,126</b>	<b>213,255</b>

**Farm Yard Manure Use**

The number of households that applied farm yard manure on their annual crops during the long rainy season was 47,523 and it was

applied to 27,067 ha representing 13 percent of the total area planted during that season (Table 3.9). Cereals had the largest planted area with applied farm yard manure (67% of the total planted area with farm yard manure), followed by roots and tubers (23%), cash crops (5%), pulses (3%), fruits & vegetables (2%) and oil seeds (0.4%) (Chart 3.63).

However, fruit and vegetables had the highest proportion of the planted area applied with farm yard manure (56.5% of the total area of fruit and vegetables in Mara region). This was followed by cereals (19.5%), oil seeds (12.8%), cash crops (11.2%), pulses (10.4%) and roots & tubers (8.4%) (Chart 3.64).

Farm yard manure is mostly used in Tarime (20.2% of the total planted area in the district), followed by Musoma Rural (14.4%), Serengeti (10.2%), Bunda (8.3%) and Musoma Urban (7.6%) (Chart 3.65).

For permanent crops, malay apple had the highest proportion of planted area applied with farm yard manure (99.8%), followed by star fruit (85.9%) and guavas (66.7%).

**Inorganic Fertiliser Use**

The total planted area applied with inorganic fertilisers in Mara region was 2,732 ha which represents 0.82 percent of the total planted area with annuals in the region and 4.76 percent of the total planted area with fertiliser in Mara region. The number of households that applied inorganic fertilizer on their annual crops during the long rainy season was 4,205 and it was applied to 1,861 ha representing 0.87 percent of the total area planted during that season (Table 3.9).

The largest area applied with inorganic fertilizers was that of cereals (61% of the total area applied with inorganic fertilizers), followed by roots and tubers (22%), fruit and vegetables (7%), pulses (5%), oil seeds (4%) and cash crops (1%) (Chart 3.66). However, the proportion of fruit and vegetables with inorganic fertilizers was higher than other crop types (8.5% of the planted area in the district), followed by oil seeds (6.5%), cereals (1.0%), pulses (0.9%), roots and tubers (0.5%) and cash crops (0.2%) (Chart 3.67). Inorganic fertiliser was mostly used in Tarime (1.00% of the total planted area in the district),

followed by Musoma Urban (0.93%), Serengeti (0.23%), Musoma Rural (0.20%) and Bunda (0.14%) (Chart 3.68). Inorganic fertilisers were not applied on permanent crops.

**Compost Use**

The total planted area applied with compost was 6,719 ha which represents only 2.0 percent of the total planted area with annual crops in the region and 11.7 percent of the total planted area with fertiliser in the region. The number of households that applied compost manure on their annual crops during the long rainy season was 7,087 and it was applied to 4,201 ha representing 1.97 percent of the total area planted in the region during the long rainy season. The number of households that applied compost manure on their farm during the short rainy season was 3,935 and it was applied to 2,518 ha representing 2.1 percent of the total area planted in Mara region during the short rainy season (Table 3.9).

The proportion of area applied with compost was very low for each type of crop (0 to 2.7%), however the distribution of the total area using compost manure shows that 65.7 percent of this area was cultivated with cereals, followed by roots and tubers (27.0%), pulses (4.8%), cash crops (2.3%) and fruits and vegetables (0.2%). There were no compost application on oil seed crops (Charts 3.69 and 3.70).

Compost is mostly used in Bunda (5.3% of the total planted area in the district), followed by Tarime (1.6%), Musoma Rural (1.2%) and Serengeti (0.5%). There was no compost use in Musoma Urban district (Chart 3.71).

In permanent crops, the only crops that compost was mostly used were banana (6.1%) and mango (0.5%).

**3.5.5 Pesticides Use**

Pesticides are chemicals used for controlling insects, diseases and weeds. This section analyses the use of these chemicals by smallholders in both annual and permanent crops in the region. Pesticides were applied to a planted area of 35,157 ha of annual crops and vegetables.

Insecticides are the most common pesticide used in the region (61.8% of the total area applied with pesticides).

This was followed by fungicides (27%) and herbicides (11.3%) (Chart 3.72).

**3.5.5.1 Insecticide Use**

The planted area applied with insecticides was 21,719 ha which represented 6.5 percent of the total planted area for annual crops and vegetables. Cash crops had the largest planted area applied with insecticides (15,653 ha, 72.1% of the total planted area with insecticides), followed by roots and tubers (2,116 ha, 9.6%), cereals (2,033 ha, 9.4%), fruits and vegetables (1,605 ha, 7.4%) and pulses (312 ha, 1.4%). There was no application of insecticides on oil seed crops (Chart 3.73).

However, the percent of insecticides used on fruit and vegetables and cash crops was much greater than in other crop types (76.1% and 76.0% respectively), whilst only 1.3 percent of the planted area with cereals was applied with insecticides (Chart 3.74).

Annual crops with more than 50 percent insecticide use were spinach (100%), water melon (100%), tomatoes (90.1%), cabbages (89.0%), cotton (76.8%) and cucumber (50.1%).

Bunda had the highest percent of planted area with insecticides (15.6% of the total planted area with annual crops in the district). This was followed by Serengeti (6.3%), Musoma Rural (6.0%) and Musoma Urban (6.0%).

The smallest percentage use was recorded in Tarime district (2.0%) (Chart 3.75).

**3.5.5.2 Herbicide Use**

The planted area applied with herbicides was 3,956 ha which represents 1.2 percent of the total planted area for annual crops and vegetables. Roots and tubers had the largest planted area applied with herbicides (2,213 ha, 56%), followed by cereals (1,062 ha, 27%), cash crops (378 ha, 9.5%), pulses (159 ha, 4%) and fruits and vegetables (143 ha, 3.6%) (Chart 3.76).

However, the percent of herbicide use on fruit and vegetables was much greater than in other crop types (6.8% of the total planted area with fruit and vegetables in the region), whilst only 1.1 percent of pulses was applied with herbicides (Chart 3.77).

The top five annual crops with highest percentage use of herbicides in terms of planted area were cucumber (50.1%), spinnach (12%), tomatoes (9.8%), bambaranuts (4.6%) and cabbages (3.1%).

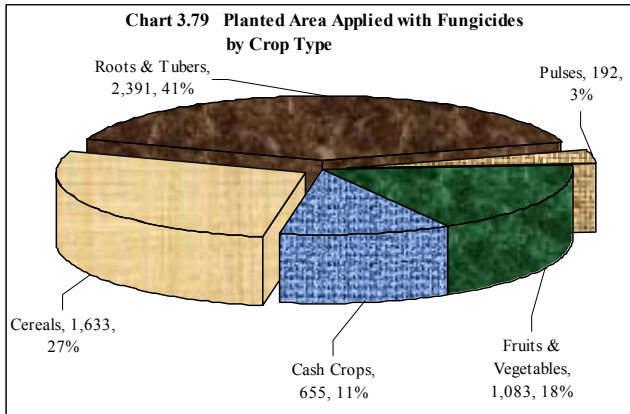

Musoma Rural had the highest percent of planted area with herbicides (1.6% of the total planted area with annual crops in the district). This was followed by Tarime (1.5%), then Musoma Urban (1.2%) and Bunda (0.6%). The smallest percentage use was recorded in Serengeti district (0.6%) (Chart 3.78).

**3.5.5.3 Fungicide Use**

The planted area applied with fungicides was 5,953ha which represented 1.8 percent of the total planted area for annual crops and vegetables. The percentage use of fungicides in the short rainy season at (1.9%) was slightly higher than the corresponding percentage for the long rainy season (1.7%). Roots and tubers had the largest planted area applied with fungicides (2,391 ha, 40.2%) followed by cereals (1,633 ha, 27.4%), fruit and vegetables (1,083 ha, 18.2%), cash crops (655 ha, 11.0%) and pulses (192 ha, 3.2%) (Chart 3.79). There was no fungicide application in oil seed crops.

However, the percentage use of fungicide in fruit and vegetables was much greater than in other crop types (51.3%), while only 1.0 percent of cereal crops was applied with fungicides (Chart 3.80).

Annual crops with more than 20 percent fungicide use were tomatoes (79.5%), tobacco (59.2%), cucumber (50.1%), spinach (30.7%), Irish potatoes (29.5%), cabbages (27.8%) and onions (20.2%).

Musoma Rural had the highest percent of planted area with fungicide (2.4% of the total planted area with annual crops in the district). This was closely followed by Serengeti (1.8%). The smallest percentage use was recorded in Bunda district (1.0%) (Chart 3.81).

**3.5.6 Harvesting Methods**

The main harvesting method for cereals was by hand. Very small amounts of maize were harvested using machines (0.2%). All other cereals and annual crops were mainly harvested by hand.

**3.5.7 Threshing Methods**

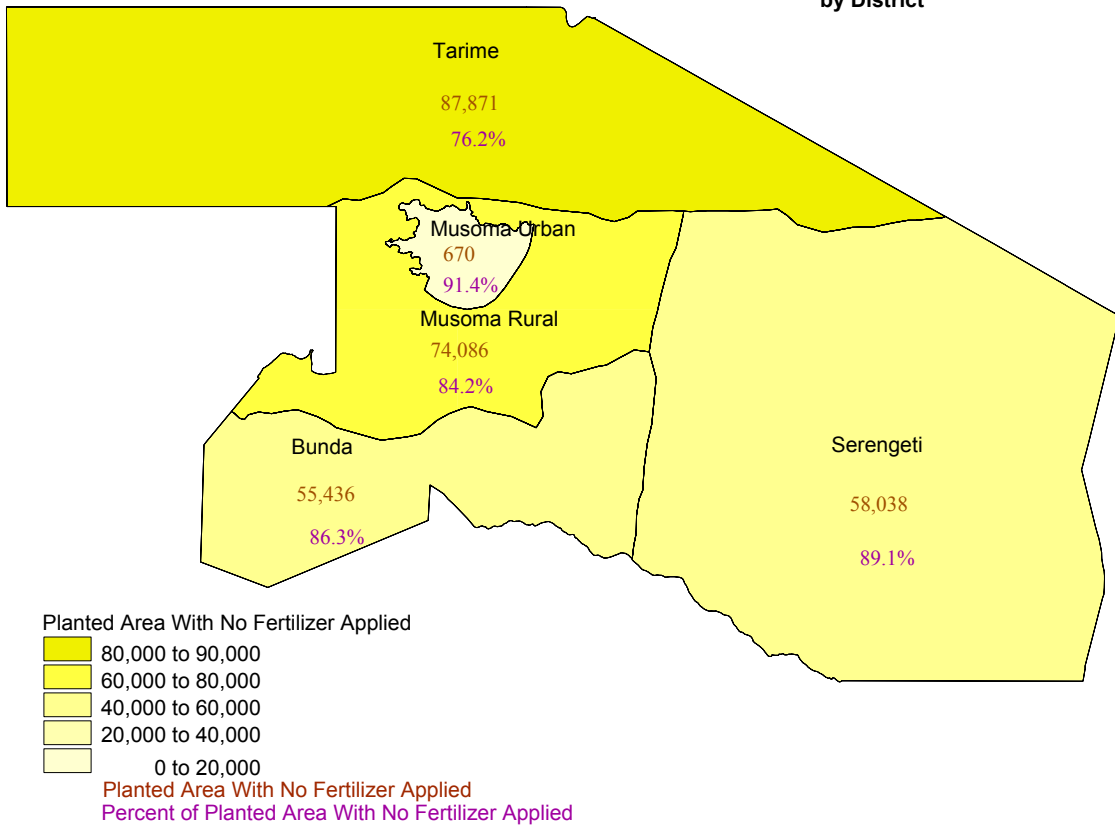

Hand threshing was the most common method used, with crops from 91.0 percent of the total area planted with cereals during the long rainy season threshed using this method. Draft animals, human powered tools and engine driven machines were only used on crops harvested from 0.4%, 2.2 percent and 0.1 percent of the total planted area respectively.

**3.6 Irrigation**

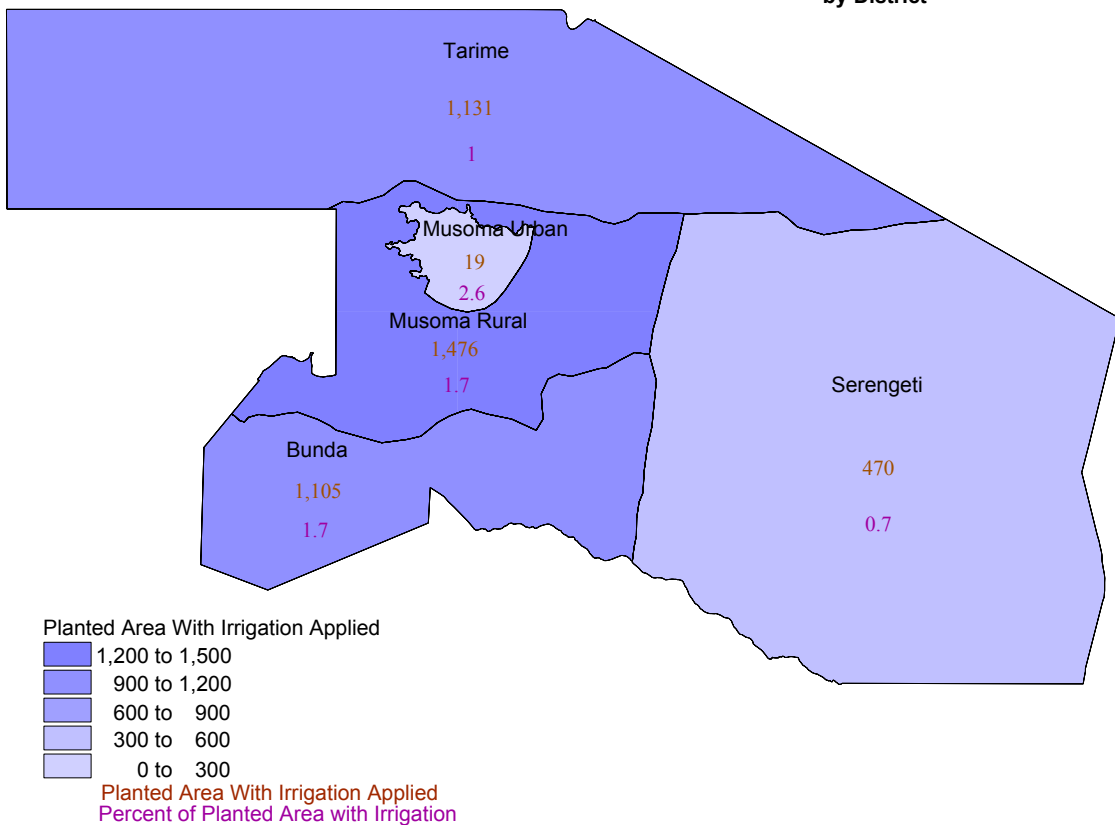

Water is the limiting factor to crop production in the majority of areas in Tanzania and without water most other agricultural practices applied to crops do not result in significant increases in yields. This section deals with the area under irrigation for different crops and the means by which water was extracted from the source and applied to the field.

**MAP 3.39 MARA**  
**Planted Area and Percent of Planted Area**  
**With No Application of Fertilizer**  
**by District**

**MAP 3.40 MARA**  
**Area Planted and Percent of Total**  
**Planted Area With Irrigation**  
**by District**

**3.6.1 Area Planted with Annual Crops and Under Irrigation**

In Mara region, the area of annual crops under irrigation was 4,202 ha representing 1.3 percent of the total area planted (Chart 3.82). The area under irrigation during the short rainy season was 2,412 ha accounting for 57 percent of the total area under irrigation. Some crops, especially vegetables, were predominantly grown during the long rainy season with irrigation. In the long rainy season, 71 percent of the area planted with vegetables was irrigated, whilst 59 percent of the vegetables were irrigated in the short rainy season.

The district with the largest planted area under irrigation with annual crops was Musoma Rural (1,476 ha, 35.1% of the total annual crops irrigated planted area in the region). This is followed by Tarime with (1,131 ha, 26.9%), Bunda (1,105 ha, 26.3%), Serengeti (470 ha, 11.2%) and Musoma Urban (19 ha, 0.5%). When expressed as a percentage of the total area planted in each district, Musoma Urban had the highest percentage with 2.6% of the planted area in the district under irrigation. This was followed by Bunda (1.7%), Musoma Rural (1.7%), Tarime (1.0%) and Serengeti (0.7%) (Chart 3.83 and Map 3.40).

Of all the different crops and in terms of proportion of the planted are that was irrigated, water melon was the most irrigated crop with 100 percent irrigation followed by tomatoes (77.7%), cabbages (74.3%), cucumber (50.1%), onions (47.7%) and amaranths (41.0%).

In terms of crop type, the area under irrigation with cereals was 1,912 ha (45.5% of the total area under irrigation), followed by fruits and vegetables with 1,387 ha (33.0%), cash crops (396 ha, 9.4%), pulses (304 ha, 7.2%) and roots and tubers (204 ha, 4.8%). Oil seed crops were not irrigated.

The area of fruit and vegetables under irrigation was 1,387 ha which represents 65.7 percent of the total planted area with fruit and vegetables. Water mellon, tomatoes, cabbages and spinnach were the most irrigated crops.

The number of households practicing irrigation in Mara region appears to have increased over the last seven years from 4,299 to 9,012 households (Chart 3.84). This may not be statically significant due to the small number of households sampled with irrigation.

**3.6.2 Sources of Water Used for Irrigation**

The main source of water used for irrigation was from wells (37% of households with irrigation). This was followed by river (34%), lake (21%), dam (5%) and canal (3%) (Chart 3.85).

While most households using irrigation in Bunda district get irrigation water from the Lake (50%), most household in Musoma Urban get their irrigation water from wells (49 %). However, most of the households in Serengeti district get irrigation water from rivers (43%).

**3.6.3 Methods of Obtaining Water for Irrigation**

Hand bucket was the most common method of obtaining water for irrigation with 83 percent of households using this method. This is followed by gravity with 6 percent of households, hand pump (2%) and motor pump (2%) (Chart 3.86).

All households with irrigation in Serengeti and Musoma Urban districts used hand bucket in obtaining water from the source, followed by Musoma Rural (85%), Tarime (77%) and Bunda (70%). Gravity method was used by few households in Musoma Rural (11%) and Bunda (10%). Hand pump was used in Tarime only (7%) and motor pump was used in Musoma Rural district only (4%).

**3.6.4 Methods of Water Application**

Most households used buckets/watering cans (87% of households using irrigation) as a method of field application. This was followed by flood irrigation (10%). Water hose and sprinklers were not widely used (2% and 1% respectively) (Chart 3.87).

All households with irrigation in Musoma Urban districts used hand bucket/watering cans in applying irrigation water from the source, followed by Tarime (93%), Serengeti (86%), Musoma Rural (84%) and Bunda (80%). Flood method was used by a few households in Bunda and Musoma Rural (20% and 16% respectively) whilst sprinkler was used by few households in Serengeti district (14%). Water hose was used in Tarime only (7%).

**3.7 Crop Storage, Processing & Marketing**

**3.7.1 Crop Storage**

Crop storage means keeping a crop for a certain period of time as food for the household, in order to sell at higher prices and as seed for planting in the following season.

The results for Mara region show that there were 135,725 crop growing households (73% of the total crop growing households) that stored various agricultural products in Mara region.

**3.7.1.1 Methods of Storage**

The region had 82,526 crop growing households storing their produce in locally made traditional structure (60.8% of households that stored crops in the region). The number of households that stored their produce in sacks/open drum was 51,453 (37.9%). This was followed by improved locally made structure (1,017 households, 0.7%), unprotected pile (182 households, 0.1%) and modern stores (141 households, 0.1%) (Chart 3.89).

Storage in locally made traditional structures was the dominant storage method in the region, with Serengeti district having the highest percentage of households using this method (82% of the total number of households storing crops in the district). This was followed by Tarime (78%), Musoma Rural (39%), Bunda (29%) and Musoma Urban (5%) (Chart 3.90).

Although the highest percent of households using sacks/open drums was in Musoma Urban district (89% of the total number of households storing crops in the district), the figure should be used with caution because of the small number of observations involved. This is followed by Bunda (69%), Tarime (21%) and Serengeti (18%).

**3.7.1.2 Duration of Storage**

Most households (52.9% of the households storing crops) stored their produce for a period of 3 to 6 months followed by those who stored for a period of over 6 months. The minority of households stored their crop for a period of less than 3 months (7.6%).

However, most households that stored paddy stored for a period of over 6 months, followed by those who stored for a period of 3 to 6 months. A small number of households stored paddy for the period of less than 3 months (Chart 3.91).

The proportion of households whose normal duration of storage is duration of 3 to 6 months was highest in Tarime district (74%), followed by Serengeti (65%), Bunda (50%), Musoma Rural (40%) and Musoma Urban (37%) (Map 3.41).

District comparison of duration of storage cannot be done for all crops combined. However, the analysis has been done for maize only as it is the most commonly stored crop. In general, quantity stored was related to the quantity produced. Districts with greater production had a higher percent of their crop stored as on 1<sup>st</sup> October 2003. However, households in Tarime district stored relatively little maize in comparison to the quantity produced indicating that the quantity stored was determined by the food and seed requirements of the household and not to sell during the “off-season” when the farm gate price of maize is higher (Chart 3.92).

### Purposes of Storage

Subsistence food crops (maize, paddy, sorghum and millets, beans and pulses) were mainly stored for household consumption. Ninety percent of households stored maize for household consumption as the main purpose of storage, followed by seed for planting (6%) and selling at higher price (4%). The highest percentage of the households that stored groundnuts/bambara nuts did so for the purpose of reserving seeds for planting (63%) (Chart 3.93).

### The Magnitude of Storage Loss

About 79.7 percent of households that stored crops had little or no loss. However the proportion of households that experienced a loss of more than a quarter was higher for food crops than crops that are produced for sale and other purposes such as tobacco, cotton and bambara nuts.

**Table 3.10: Number of Households Storing Crops by Estimated Storage Loss and Crop**

Crop	Estimated Storage Loss								Total
	Little or no Loss		Up to 1/4 Loss		Between 1/4 and 1/2 Loss		Over 1/2 Loss		
	Number of Households	%	Number of Households	%	Number of Households	%	Number of Households	%	
Maize	81,503	79.4	14,844	14.5	5,054	4.9	1,293	1.3	102,693
Paddy	7,472	96.0	195	2.5	0	0.0	117	1.5	7,785
Sorghum and Millets	59,687	75.8	13,596	17.3	4,250	5.4	1,231	1.6	78,764
Beans and Pulses	25,150	85.1	3,054	10.3	455	1.5	879	3.0	29,539
Coffee	132	100.0	0	0.0	0	0.0	0	0.0	132
Tobacco	70	100.0	0	0.0	0	0.0	0	0.0	70
Cotton	149	100.0	0	0.0	0	0.0	0	0.0	149
Groundnuts/Bambara Nuts	2,071	100.0	0	0.0	0	0.0	0	0.0	2,071

The proportion of households that reported a loss of more than a quarter was greatest for sorghum and millets (7.0% of the total number of households that stored crops). This was followed by maize (6.2%), pulses (4.5%) and paddy (1.5%) (Table 3.10).

**3.7.2 Agro-processing and By-products**

Agro processing refers to a process that converts a crop product from one form to another form in order to add value or increase the palatability of the product. Agro-processing was practiced by most crop growing households in Mara region (171,860 households, 91.3% of the total crop growing households) (Chart 3.94a).

With exception of Musoma Urban district, the percent of households processing crops in the rest of the districts was very high (above 80%). Musoma Urban had the lowest percent of households processing crops (62% of crop growing households in the district) (Chart 3.94b).

**3.7.2.1 Processing Methods**

Most crop processing households processed their crops using neighbour’s machines representing 67 percent (115,059 households). This was followed by those processing on-farm by hand (42,052 households, 24.5%), on farm by machine (12,461 households, 7%) and by trader (1,918 households, 1%). The remaining methods of processing were used by very few households (less than 1%).

Although processing by neighbours machine was the most common processing method in most of districts in Mara region, district differences existed. Serengeti had the highest percent of households processing using neighbour’s machine (93%), followed by Bunda (80%), Musoma Rural (63%), Tarime (55%) and Musoma Urban (25%). Processing by trader was more common in Musoma Urban (12.3%), whilst processing on farm by machine was more prevalent in Tarime (13.8%) (Chart 3.94c).

**Main Agro-processing Products**

Two types of products can be produced from agro-processing namely, main product and by-product. The main product is the major product after processing and the by-product is the secondary after processing. For example the main product after processing maize is normally flour whilst the by-product is normally the bran.

The main processed product was flour/meal with 164,261 households processing crops into flour (95.6%) followed by grain with 6,649 households (3.9%). The remaining products were produced by a small number of households (Chart 3.95).

The number of households producing by-products accounted for 5.4 percent of the households processing crops. The most common by-product produced by crop processing households was husk with 5,583 households (60% of the households producing by-products), followed by bran (1,705 households, 18%), pulp (533 households, 6%) and juice (514 households, 6%). The remaining by-products were produced by a small number of households (Chart 3.96).

**Main Use of Primary Processed Products**

Primary processed products were used for households/ human consumption and for selling. The most important use was for household/human consumption which represented 99.4 percent of the total households that used primary processed products (Chart 3.97). Districts that sold primary processed products were Tarime and Musoma Rural.

Out of 471 households that sold processed products, 271 were from Tarime (58% of the total number of households selling processed products in the region) and 199 households (42%) were from Musoma Rural District. Other districts did not sell processed products (Chart 3.98). Musoma Rural had the highest proportion of households that sold processed products (0.4%). This was followed by Tarime (0.3%).

**Outlets for Sale of Processed Products**

Most households that sold processed products sold to local market and trade stores (12,532 households, 72% of households that sold crops). This was followed by selling to neighbours (2,552 households, 14%), large scale farm (721 households, 4%), secondary markets (717 households, 4%) and traders at farm (613 households, 3%). Households that sold to the remaining outlet accounted for less than 1.5 percent for each location (Chart 3.99).

There were large differences between districts in the proportion of households selling processed products to neighbours, with Musoma Urban district having the largest proportion (57% of the households selling processed products in the district), whereas Serengeti had only 5 percent. With exception of Musoma Urban which had the highest percentage of households selling processed products to neighbours, the rest of the districts sold mostly to local markets and trade stores.

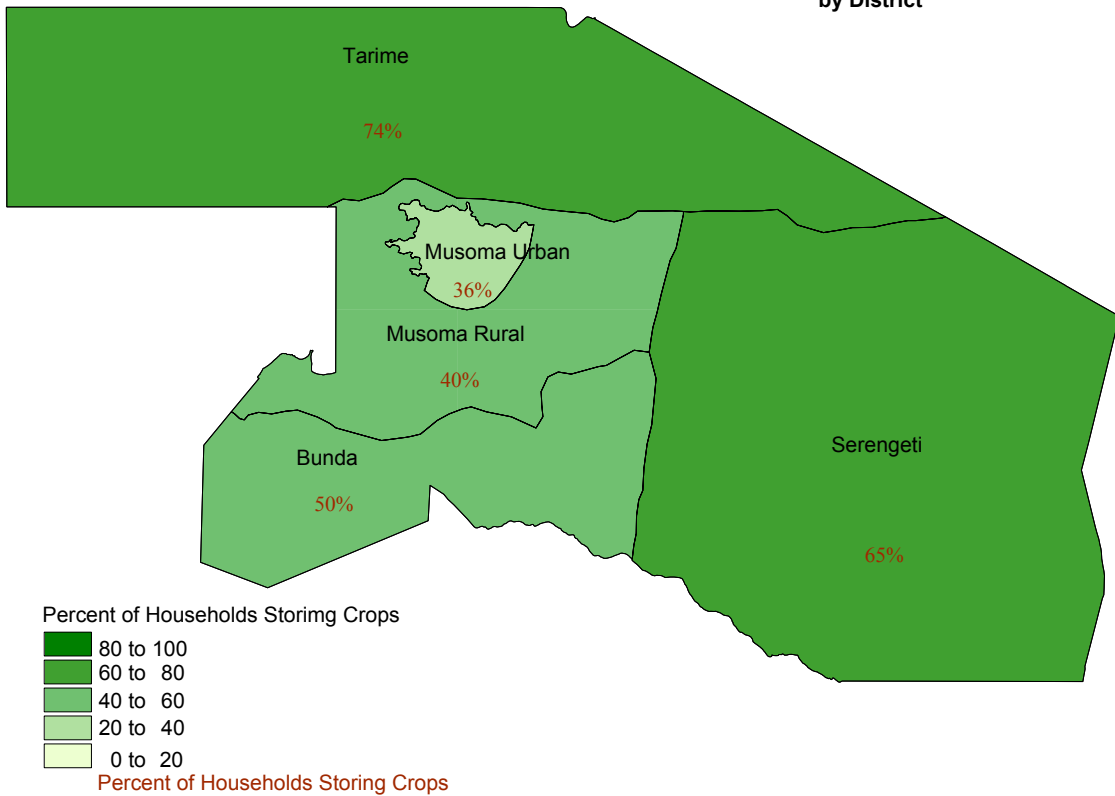

Compared to other districts, Musoma Rural had the highest percent of households selling processed products to traders at farm and farmers associations. The sale of processed products to secondary markets was most prominent in Serengeti compared to other districts, whilst selling to large scale farms was most prominent in Bunda district. The district which had the highest proportion of households selling processed products to marketing cooperative was Serengeti (Chart 3.100).

**3.7.3 Crop Marketing**

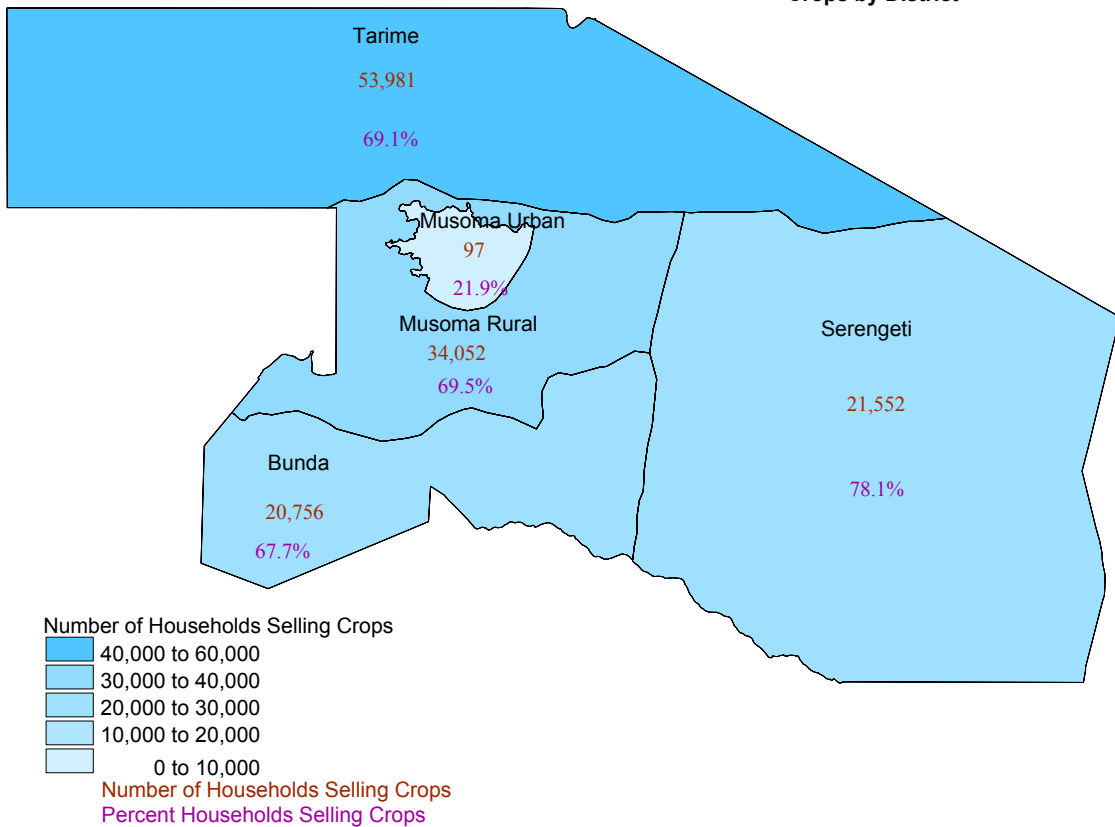

The number of households that reported selling crops was 130,438 which represent 70.2 percent of the total number of crop growing households. The proportion of crop growing households selling crops was highest in Serengeti (77.3%) followed by Musoma Rural (69.5%), Tarime (69.1%), Bunda (67.7%) and Musoma Urban (21.9%) (Chart 3.101 and Map 3.42).

**MAP 3.41 MARA**

**MAP 3.42 MARA**  
**Number of Households and Percent**  
**of Total Households Selling**  
**Crops by District**

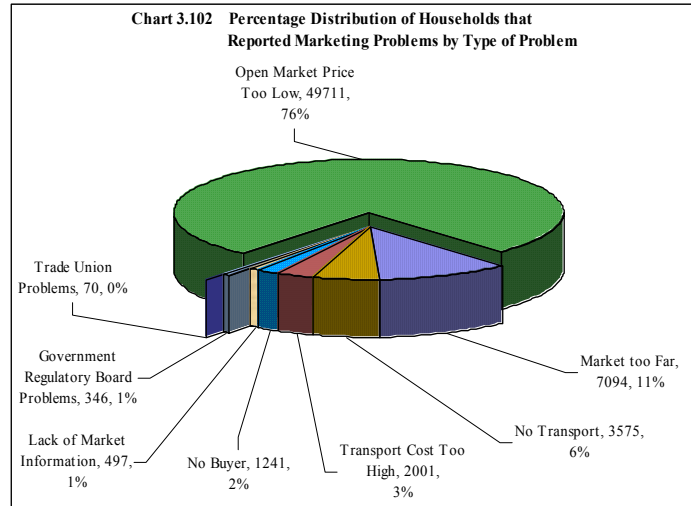

## Main Marketing Problems

Low price for agricultural produce was the main marketing problem reported by households (76% of crop growing households that reported main marketing problems).

Apart from low market prices, other problems were longer distances to the markets (11%), lack of transport (6%), high transport costs (3%) and lack of buyers (2%). Other marketing problems were minor and represented less than 2 percent of the total reported problems (Chart 3.102).

**Table 3.11 Reasons for Not Selling Crop**

Produce		
Main Reason	Household Number	%
Production Insufficient to Sell	62,229	84.5
Other	6,103	8.3
Price Too Low	3,085	4.2
Trade Union Problems	1,534	2.1
Market Too Far	304	0.4
Co-operative Problems	251	0.3
Government Regulatory Board Problems	136	0.2
<b>Total</b>	<b>73,642</b>	<b>100</b>

## Reasons for Not Selling Crops

The main reason for not selling crops was reported as “insufficient production to sell”, representing 84.5 percent of the agricultural households that reported reasons for not selling, followed by low price (4.2%), trade union problems (2.1%), markets location being too far (0.4%), cooperative problems (0.3%) and Government regulatory board problems (0.2%) (Table 3.11).

## 3.8 Access to Crop Production Services

### 3.8.1 Access to Agricultural Credit

The census result shows that in Mara region very few agricultural households (675, 0.4% of agricultural households in the region) accessed credit out of which 419 (75%) were male-headed households and 256 (38%) were female headed households. In Musoma Rural district, only female headed households got agricultural credit whereas in Serengeti both male and female headed households accessed agricultural credit (Table 3.12).

**Table 3.12 Number of Agricultural Households that Received Credit by Sex of Household Head and District**

District	Male		Female		Total Number
	Number	%	Number	%	
Tarime	0	0	0	0	0
Serengeti	419	75	140	25	559
Musoma Rural	0	0	117	100	117
Bunda	0	0	0	0	0
Musoma Urban	0	0	0	0	0
<b>Total</b>	<b>419</b>	<b>75</b>	<b>256</b>	<b>38</b>	<b>675</b>

#### 3.8.1.1 Source of Agricultural Credit

The major agricultural credit providers in Mara region were traders and/or trade stores which collectively provided credit to 489 agricultural households (73% of the total number of households that accessed credit), followed by saving and credit societies (17%) and family and friends and relatives (10%) (Chart 3.103). Family, friends and relatives were the sole source of credit in Serengeti district and Saving and Credit Societies provided credit to households in Musoma Rural district only (Chart 3.104).

**Use of Agricultural Credits**

A large proportion of the agricultural credit provided to agricultural households in Mara region was used for buying agrochemicals (66%), followed by tools and equipment (9%), purchasing of livestock (9%) and other unspecified activities (16%)(Chart 3.105).

**Reasons for Not Using Agricultural Credits**

The main reason for not using agricultural credit was little credit awareness accounting for 69.3 percent of the agricultural households (“did not know how to get credit” and “don’t know about credit”). This was followed by households reporting “un-availability of credit” (10.0%), followed by “not wanting to go into debt” (9.2%). The rest of the reasons accounted for 11.5 percent of the households (Chart 3.106).

**3.8.2 Crop Extension**

The number of Agricultural households that received crop extension was 62,800 (34% of the total crop growing households in the region) (Chart 3.107). Some districts had more access to extension services than others, with Bunda having a relatively high proportion of households (60% of the crop growing households) that received crop extension messages, followed by Musoma Rural (48%), Musoma Urban (26%), Serengeti (23%) and Tarime (19%) (Chart 3.108 and Map 3.43).

**Sources of Crop Extension Messages**

Of the households receiving extension advice the Government provided the greatest proportion (95.2%, 58,531 households). NGOs/Development projects provided 3.9 percent, large scale farms 0.4 percent and the remaining providers less than 0.6 percent (Chart 3.109), however district differences exist with the proportion of the households receiving advice from government services ranging from between 81.0 percent in Musoma Urban to 98.8 percent in Serengeti.

**Quality of Extension**

An assessment of the quality of extension indicates that 64 percent of the households receiving extension ranked the service as being good, followed by average (24 %) and very good (11%) (Chart 3.110).

However, care should be exercised when making decisions on quality of extension and also other variables in the extension report as all the enumerators were extension agents and some degree of bias is expected.

**3.9 Access to Inputs**

Access to inputs in this section refers to all crop growing households in Mara regardless of whether the household grew annual or permanent crops. In previous sections, the reference was on annual crops only. Because of this, the figures presented in this section may differ from those in the previous section on inputs (Section 3.5). Data on source of inputs is only found in this section and applies to both annual and permanent crops.

A small number of households use inputs and this is particularly true of inputs that are not produced on the farm i.e., improved seeds, fungicides, inorganic fertiliser and herbicides. In Mara region farm yard manure was used by 48,514 households which represented 26.1 percent of the total number of crop growing households. This was followed by improved seeds (22.9%), insecticide/fungicide (11.6%), compost (3.6%), inorganic fertiliser (1.6%) and herbicide (0.1%) (Table 3.13).

**Table 3.13 Access to Inputs**

Type of Input	Households With Access to Input		Households Without Access to Input	
	Number	%	Number	%
Farm Yard Manure	48,514	26.1	137,277	73.9
Improved Seeds	42,530	22.9	143,261	77.1
Insecticide/Fungicide	21,587	11.6	164,204	88.4
Compost	6,716	3.6	179,075	96.4
Inorganic Fertiliser	2,932	1.6	182,859	98.4
Herbicide	206	0.1	185,584	99.9

### 3.9.2 Inorganic Fertilisers

Smallholders that use inorganic fertilisers in Mara region mostly purchased them from the local market/trade store (93.3% of the total number of inorganic fertiliser users). The remaining sources of inorganic fertilisers were of minor importance (Chart 3.111).

Most households reside between 10 and 20 km from the source of inorganic fertilizers (39%), followed by 20 km and above (22%) and between 3 and 10 km (15%) (Chart 3.112).

Due to the very small number of households using inorganic fertilisers coupled with the small number of households responding to “non availability” as the reason for not using (32%), it may be assumed that access to inorganic fertiliser is not the main reason for not using. Other reasons such as cost are more important with 57 percent of households responding to cost factors as the main reason for not using. In other words, it is assumed that if the cost was affordable, the demand would be higher and inorganic fertiliser would be made more available.

More smallholders use inorganic fertilisers in Tarime than in other districts in Mara region (73% of households using inorganic fertilisers), followed by Musoma Rural (20%), Serengeti (5%), Bunda (3%) and Musoma Urban (0.6%).

### 3.9.3 Improved Seeds

The percent of households that use improved seeds was 22.9 percent of the total number of crop growing households. Most of the improved seeds were from the local markets/trade stores (47.2%). Other less important sources of improved seeds were crop buyers (25.7%), co-operatives (12.0%), neighbours (7.4%), local farmers group (2.7%), locally produced by the household (1.7%), development project (1.7%) and secondary market (1.1%). Only 0.3 percent of households using improved seeds obtained them from large scale farms (Chart 3.113).

Access to improved seeds were better than access to chemical inputs with 31 percent of households obtaining the input within 1 km of the household (Chart 3.114) compared to 11 percent for chemical fertilizer input. The higher use of improved seeds compared to other inputs is an indication that the availability is not the main prohibiting factor for the use of inputs but rather other factors such as cost.

The district that used improved seeds most was Bunda with 36.7 percent of the total number of crop growing households using improved seeds in the district, followed by Musoma Urban (26.9%) and Musoma Rural (24.9%). Percentages of the crop growing households in Tarime and Serengeti districts that used improved seeds were 18.4 and 16.5 respectively (Map 3.44).

**3.9.4 Insecticides and Fungicides**

Most smallholder households using insecticides and fungicides mainly purchase them from local markets/trade stores (56.1% of the total number of fungicide users), followed by crop buyers (33.9%) and from co-operatives (6.4). Other sources of insecticides/ fungicides are of minor importance (Chart 3.115). Chart 3.116 shows that 74 percent of the crop growing households which used insecticides and pesticides obtained them from the distance of less than or equal to ten kilometres.

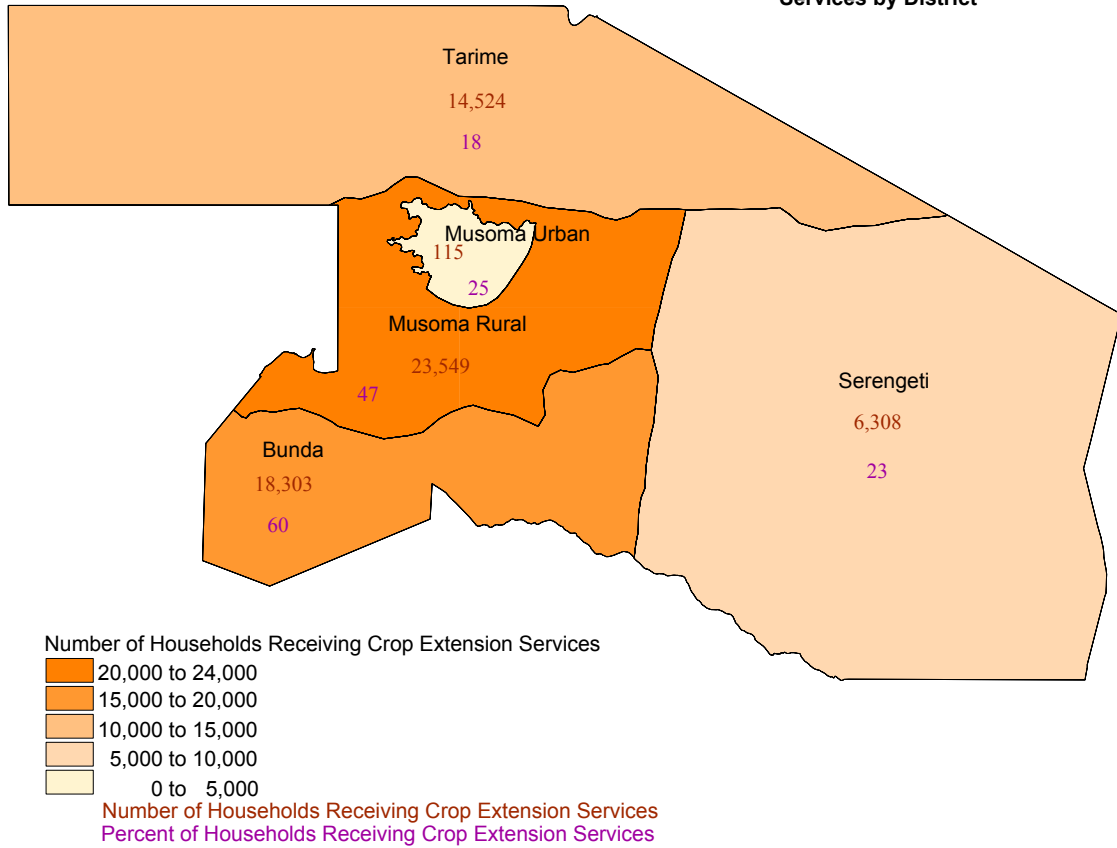

The small number of households using insecticides/fungicides, coupled with the 15 percent of households responding to “not available” as the reason for not using, then it may be assumed that access was not the main reason for not using the input. Other reasons such as costs were more important with 52 percent of households responding to cost factors as the main reason for not using the inputs. In other words, it may be assumed that if the cost was affordable, the demand would be higher and insecticides/fungicides would be made more available. Insecticide/Fungicide were mostly used in Bunda district with 29 percent of the total number of crop growing households using them, followed by Serengeti (14%), Musoma Rural (12%), Musoma Urban (11%) and Tarime (3%).

**3.10 Tree Planting**

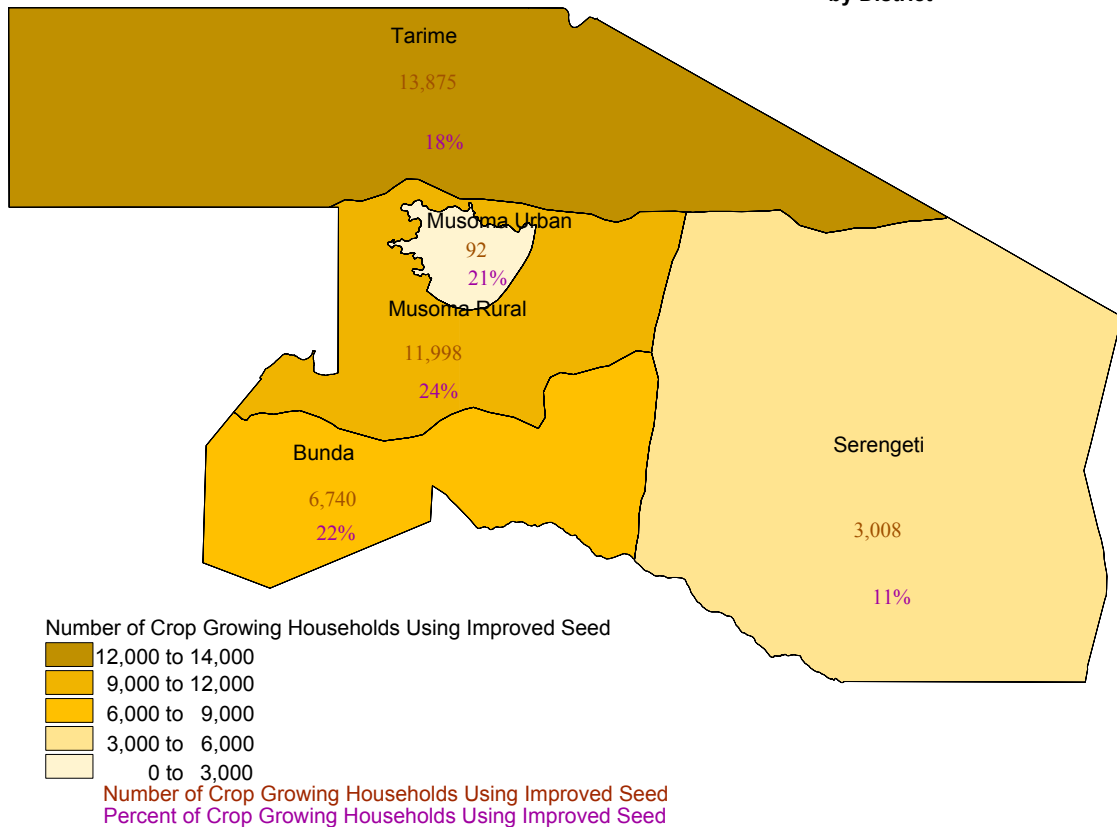

The number of households involved in tree farming was 53,900 representing 29 percent of the total number of agriculture households (Chart 3.117).

**MAP 3.43 MARA**  
**Number of Households and Percent of Total Households Receiving Crop Extension Services by District**

**MAP 3.44 MARA**  
**Number and Percent of Crop Growing Households using Improved Seed by District**

The number of trees planted by smallholders on their allotted land was 4,540,084 trees. The average number of trees planted per household that plants trees on their land was 84 trees

The main species planted by smallholders was Eucalyptus spp (1,807,591 trees, 39.8%), followed by Trichilia spp (1,371,363 trees, 30.2%), then Gravellis spp (388,923 trees, 8.6%), Cyprus spp (324,484 trees, 7.1%), Azadrachta spp (107,041, 2.4%), Sesbania spp (105,817 trees, 2.3%) and Senna spp (101,615 trees, 2.2%). The remaining trees species were planted in comparatively small numbers (Chart 3.118.). Tarime has the largest number of trees planted by smallholders than any other district with 79.3 percent of the total number of trees in Mara region and is dominated by Eucalyptus spp. This is followed by Musoma Rural (11.0%) which was dominated by Gravellia spp, then Serengeti (7.6%) dominated by Eucalyptus spp, Bunda (2.1%) dominated by Azadrachta spp and Musoma Urban (0.1%) which was mainly planted with Gravellis spp (Chart 3.119 and Map 3.45).

Trees planted in plantations or coppice are more common among smallholder households. The proportion of trees that were planted in plantations/coppice was 46 percent, followed by trees scattered in fields 29 percent and then trees planted in field boundaries 25 percent (Chart 3.120).

The main purpose of planting trees was to obtain planks/timber (56.0%). This is followed by obtaining wood for fuel (18.9%), poles (10.7%), shade (9.4%) and charcoal (0.2%) (Chart 3.121).

### 3.11 Irrigation and Erosion Control Facilities

Erosion control and water harvesting facilities are grouped together as they normally have dual purposes of reducing erosion and increasing the amount of water available for crop production.

The number of agricultural households that had soil erosion and water harvesting facilities on their farms was 18,282 which represented 10 percent of the total number of agricultural households in the region (Chart 3.122).

The proportion of households with soil erosion control and water harvesting facilities was highest in Musoma Rural district (24% of the total agricultural households in the district), followed by Musoma Urban (21%), Tarime (6%), Serengeti (2%) and Bunda (1%) (Chart 3.123 and Map 46).

Erosion control bunds accounted for 63.2 percent of the total number of structures, followed by water harvesting bunds (29.2%), drainage ditches (3.7%), tree belts (3.3%), terraces (0.4%), dams (0.1%) and vetiver grass (0.1%) (Chart 3.124).

Erosion control bunds and tree belts, together had 290,125 structures. This represented 92.4 percent of the total structures in the region. The remaining 7.5 percentages were shared among the rest of the erosion control methods mentioned above. Musoma Rural district had 282,054 erosion control structures representing 90 percent of the total erosion structures in Mara region.

### 3.12 Livestock Results

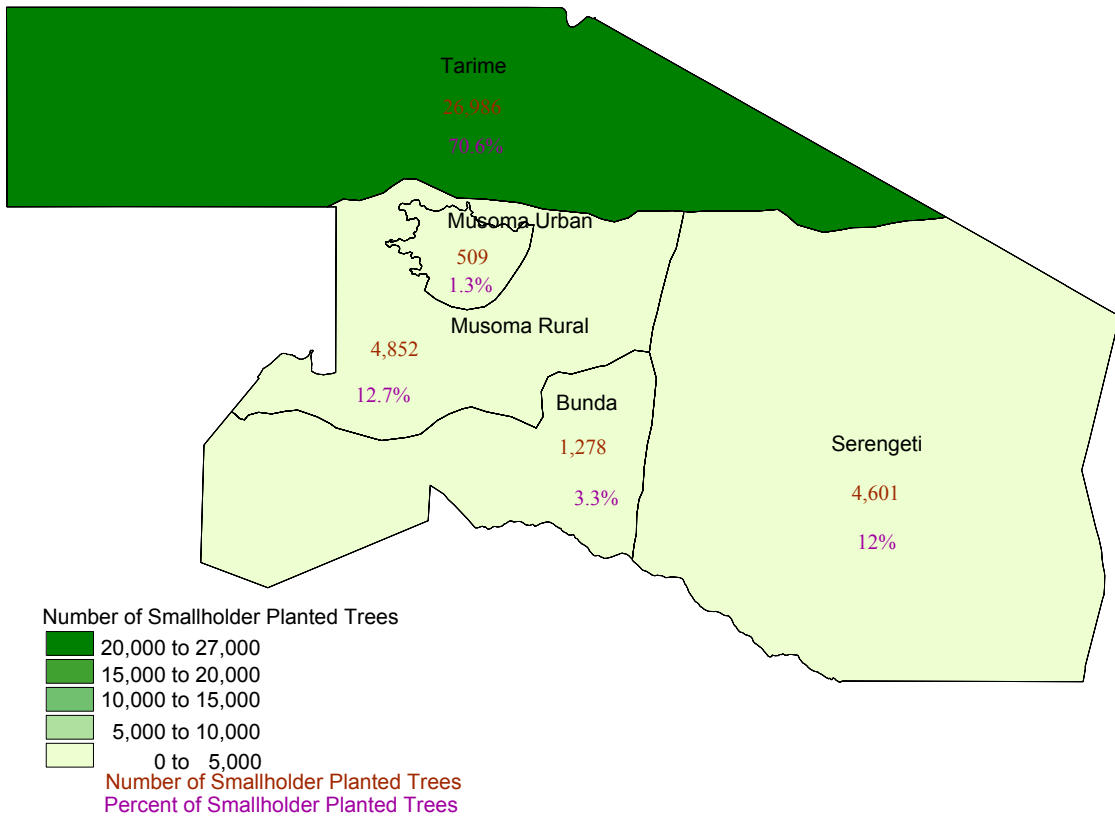

#### 3.12.1 Cattle Production

The total number of cattle in the region was 1,099,068. Cattle were the dominant livestock type in the region, followed by goats, sheep and pigs. The region had 6.5 percent of the total cattle population on Tanzania Mainland.

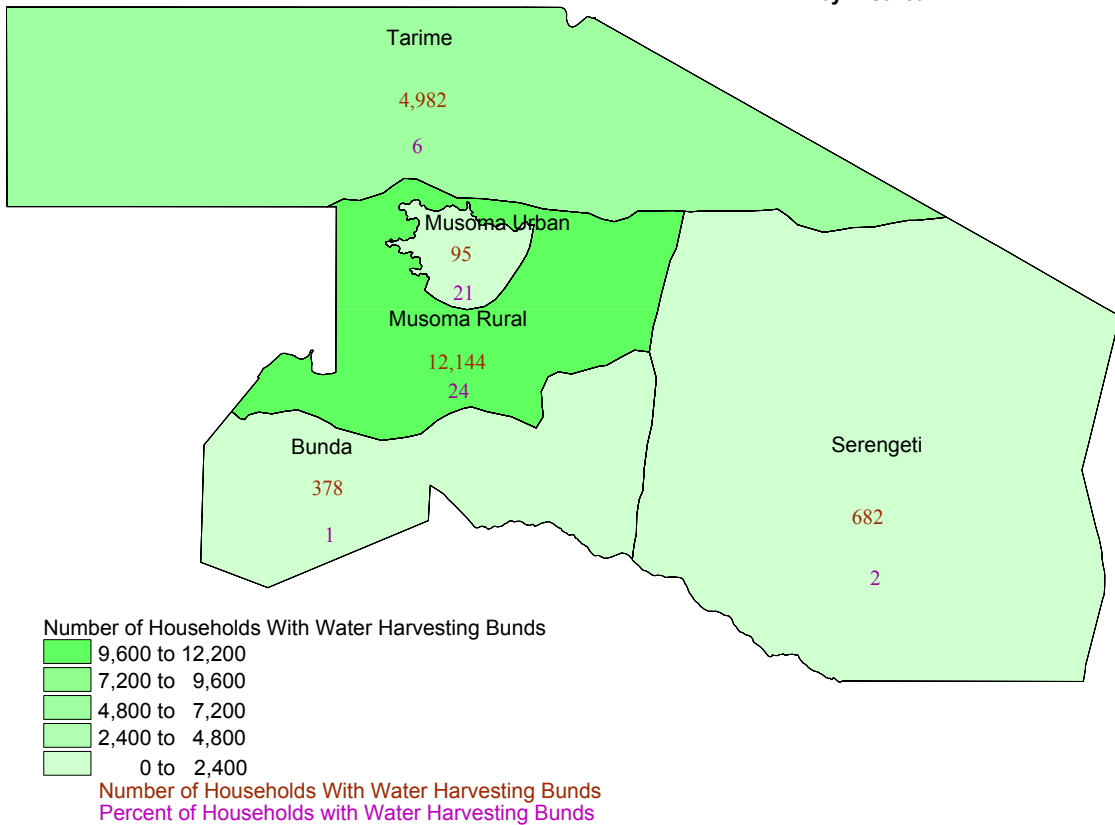

#### Cattle Population

The number of indigenous cattle in Mara region was 1,090,007 (99.2 % of the total number of cattle in the region). The number of dairy breeds was 8,797 cattle (0.8%) and 264 cattle (0.02%) were beef breeds.

**MAP 3.45 MARA**  
**Number and Percent of Smallholder**  
**Planted Trees by district**

**MAP 3.46 MARA**  
**Number and Percent of Households**  
**With Water Harvesting Bunds**  
**by District**

The census results show that 63,430 agricultural households in the region (33.7% of total agricultural households) kept about 1.1 million cattle. This was equivalent to an average of 17 heads of cattle per cattle-keeping-household. The district with the largest number of cattle was Tarime which had about 349,523 cattle (31.8 % of the total cattle in Mara region). This is followed by Bunda (267,198 cattle, 24.3%), Serengeti (251,329 cattle, 22.9%) and Musoma Rural (229,719 cattle, 20.9%). Musoma Urban had the least number of cattle (1,301 cattle, 0.1%) (Chart 3.125 and Map 47). However, Bunda district had the highest density of cattle in the region (175 heads per sq km) (Map 3.48).

Although Tarime district had the largest number of cattle in the region, most of them were indigenous. The number of dairy cattle was very small and the number of beef cattle was insignificant. Musoma Rural district had the largest numbers of dairy and beef cattle in the region. In general, the number of beef cattle in the region was insignificant (Chart 3.126).

**Herd Size**

Thirty one percent of the cattle-rearing households had herds of size 1-5 cattle with an average of 3 cattle per household. Herd sizes of 31-40 accounted for about 7 percent of all cattle-rearing households and 14 percent of all cattle in the region. Only 12 percent of the cattle rearing households had herd sizes of 31- 100 cattle. About 87 percent of total cattle rearing households had herds of size 1-30 cattle and owned 49 percent of total cattle in the region, resulting in an average of 10 cattle per cattle rearing household. There were about 557 households with a herd size of more than 151 cattle each (163,616 cattle in total) resulting in an average of 294 cattle per household.

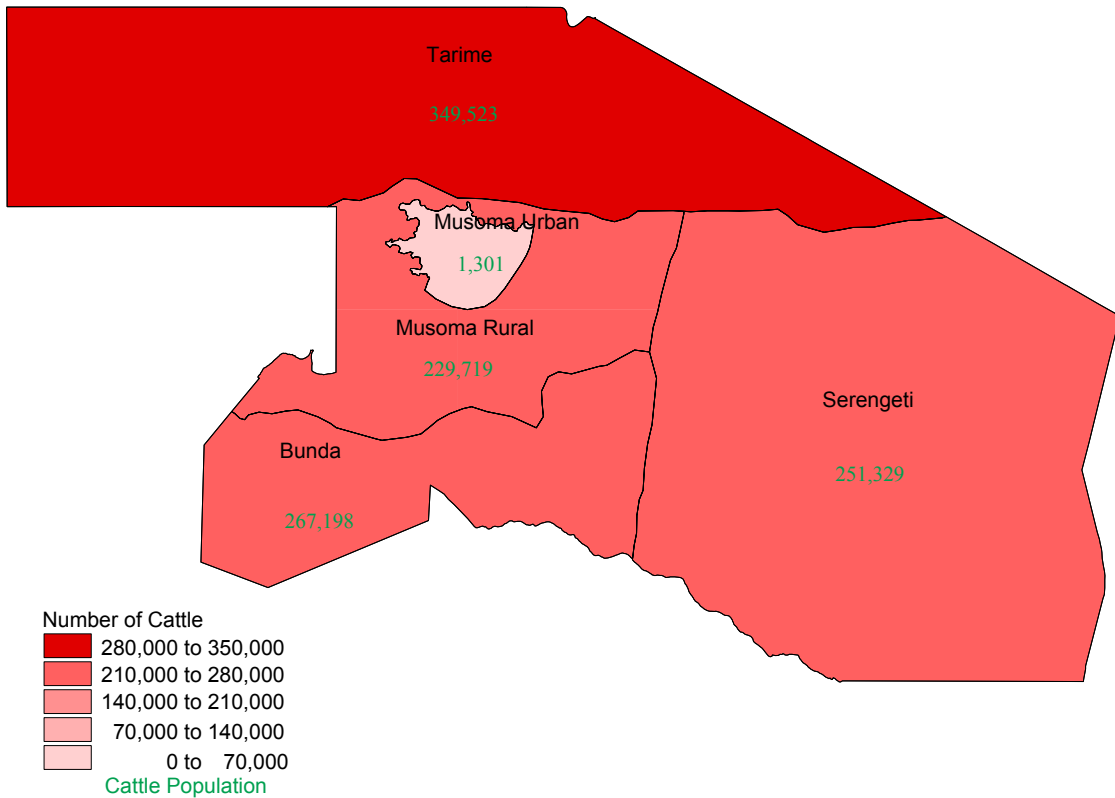

**Cattle Population Trend**

Cattle population in Mara decreased during the period of eight years from 1,291,576 in 1995 to 1,099,068 cattle in 2003. This implies an overall annual negative growth rate of -2.00 percent (Chart 3.127). However, the rate of decrease was lower for the period of four years from 1995 to 1999 (-0.37) as compared to that of the period from 1999 to 2003 (-3.60).

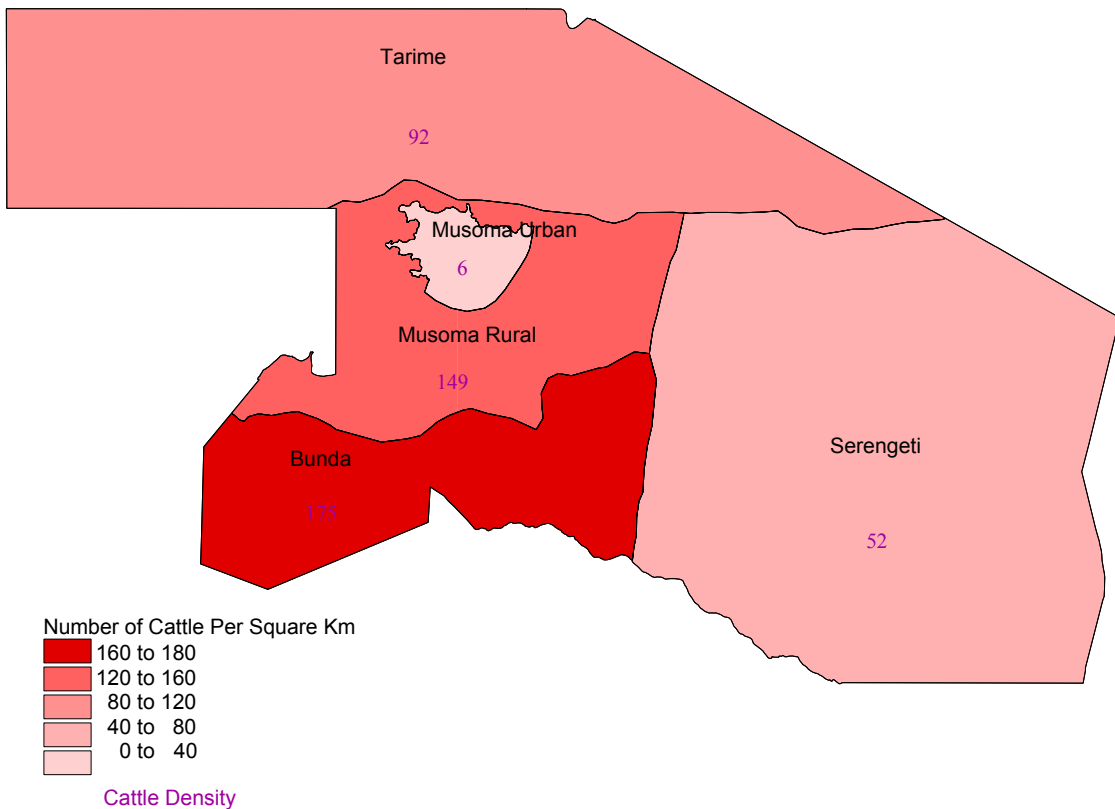

However, the rate of decrease was lower for the period of four years from 1995 to 1999 (-0.37) as compared to that of the period from 1999 to 2003 (-3.60).

**MAP 3.47 MARA**  
**Cattle Population as of 1st October 2003**  
**by District**

**MAP 3.48 MARA**  
**Cattle Density as of 1st October 2003**  
**by District**

### Improved Cattle Breeds

The total number of improved cattle in Mara region was 9,061 (8,797 dairy and 264 improved beef). The dairy cattle constituted 0.8 percent of the total cattle and 97.1 percent of improved cattle in the region. The number of beef cattle in the region constituted 2.9 percent of the total number of the improved cattle and 0.02 percent of the total cattle. The number of improved cattle increased from 1,890 in 1995 to 9,061 in 2003 at an annual rate of 21.6 percent. From the year 1995 to 1999 the number of improved cattle decreased from 1,890 to 704 (an annual decrease rate of -21.9). The population shot from 704 in 1999 to 9,061 at an annual rate of 89.4 percent (Chart.128).

### 3.12.2. Goat Production

Goat rearing was the second most important livestock keeping activity in the region, followed by sheep and pig rearing. In terms of total number of goats, Mara region ranked 9 out of the 21 regions of Tanzania Mainland with 5.4 percent of the total goats.

#### Goat Population

The number of goat-rearing households in Mara region was 72,575 (39% of all agricultural households in the region) with a total number of 634,044 goats giving an average of 9 head of goats per goat-rearing household. Tarime district had the largest number of goats (237,710 goats, 37.5% of all goats in the region), followed by Musoma Rural (173,221 goats, 27.3%), Bunda (118,038 goats, 18.6%), Serengeti (103,574 goats, 16.3%) and Musoma Urban (1,501 goats, 0.2%) (Chart 3.129 and Map 3.49). However Musoma Rural district had the highest density of goats in the region (109 head per km<sup>2</sup>) (Map 3.50).

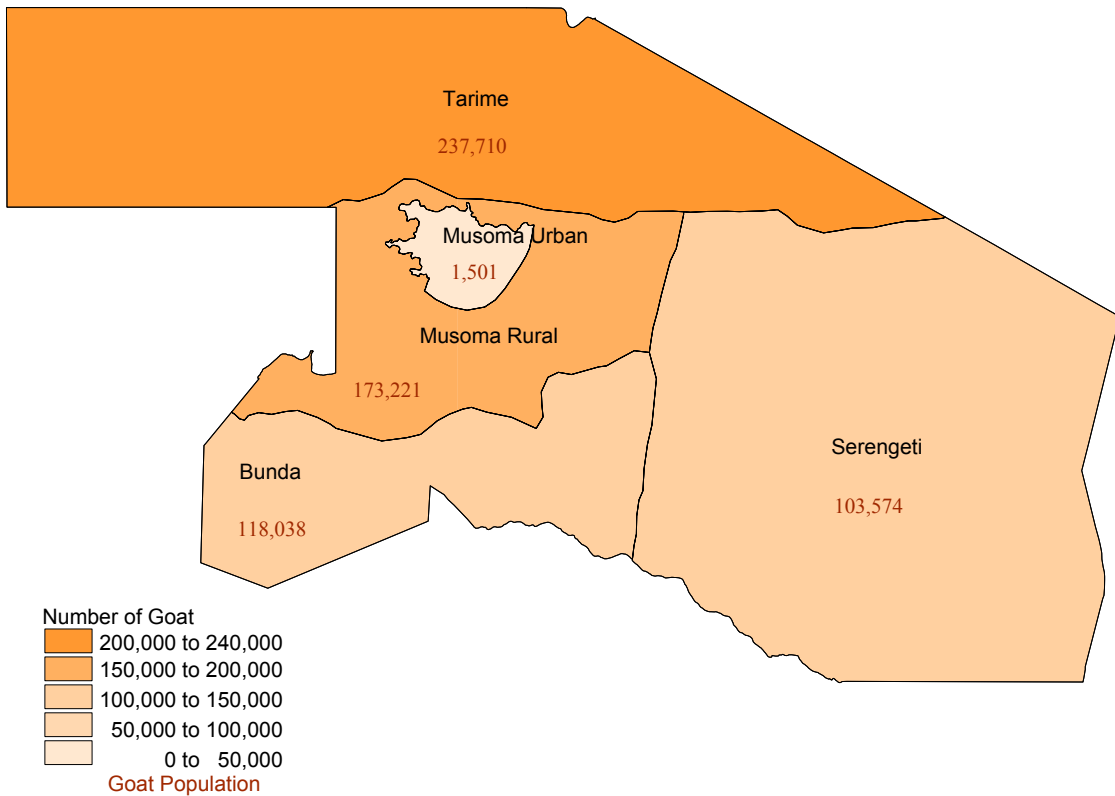

#### Goat Herd Size

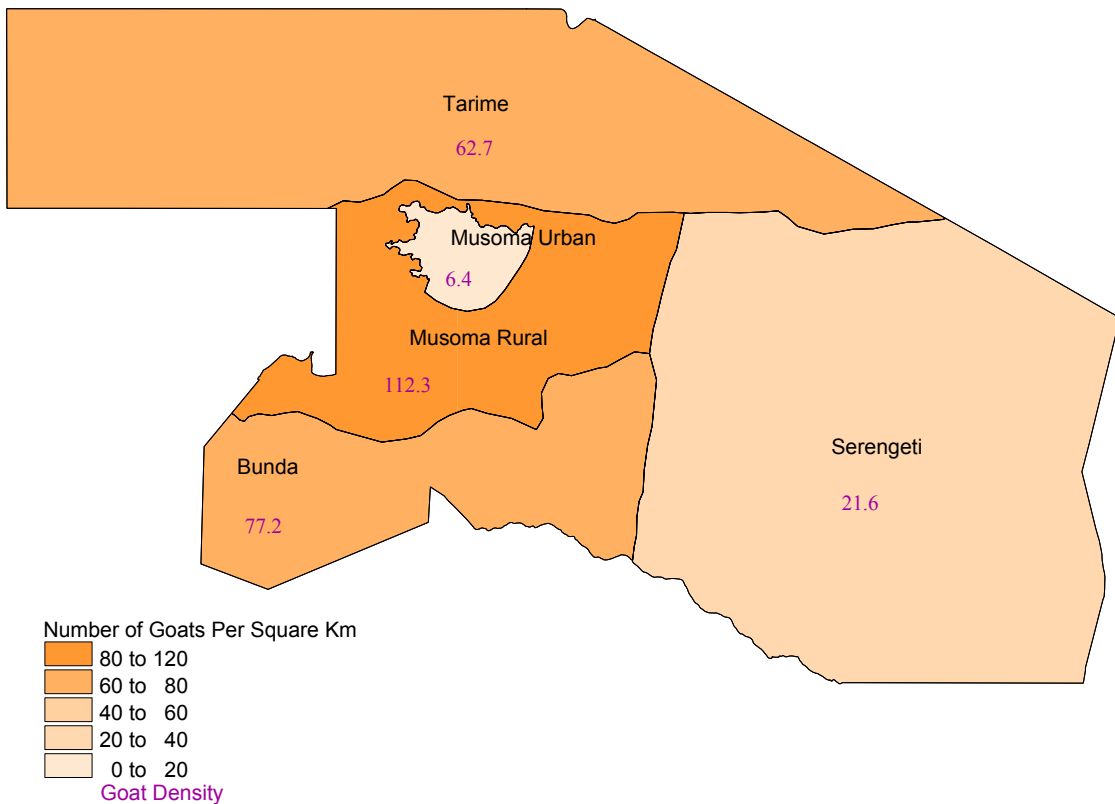

Thirty seven percent of the goat-rearing households had herd size of 1-4 goats with an average of 3 goats per goat rearing household. About 84 percent of total goat-rearing households had herd size of 1-14 goats and owned 56 percent of the total goats in the region resulting in an average of 6 goats per goat-rearing households. The region had 1,405 households (1.9%) with herd sizes of 40 or more goats each (66,416 goats in total), resulting in an average of 47 goats per goat rearing household.

**MAP 3.49 MARA**  
Goat Population as of 1st Octobers 2003  
by District

**MAP 3.50 MARA**  
Goat Density as of 1st October 2003  
by District

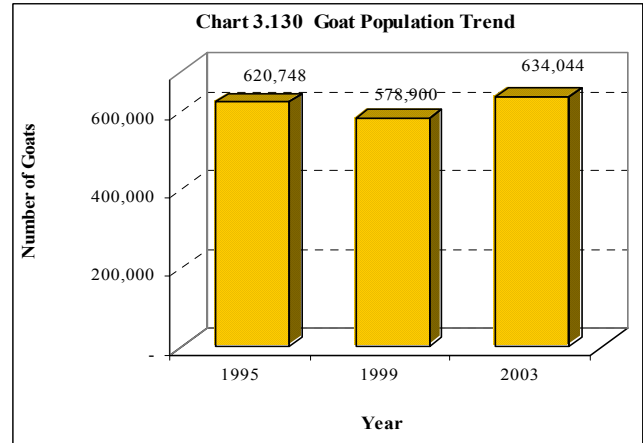

## Goat Breeds

Goat husbandry in the region was dominated by the indigenous breeds that constituted 98.8 percent of the total goats in Mara region. Improved goats for meat and diary goats constituted 0.8 and 0.4 percent of total goats respectively.

## Goat Population Trend

The overall annual growth rate of goat population from 1995 to 2003 was 0.3 percent. This positive trend implied eight years of population increase from 620,748 in 1995 to 634,044 in 2003. The number of goats decreased from 620,748 in 1995 at an annual rate of -1.7 percent to 578,900 in 1999. From 1999 to 2003, the goat population increased at an annual rate of 2.3 percent (Chart 130).

### 3.12.3. Sheep Production

Sheep rearing was the third most important livestock keeping activity in Mara region after cattle and goats. The region ranked 7 out of 21 Mainland regions and had 4.9 percent of all sheep on Tanzania Mainland.

## Sheep Population

The number of sheep-rearing households was 21,780 (12% of all agricultural households in Mara region) rearing 194,073 sheep, giving an average of 9 heads of sheep per sheep-rearing household. The district with the largest number of sheep was Tarime with 75,196 sheep (39% of total sheep in Mara region) followed by Serengeti (48,376 sheep, 25%), Musoma Rural (40,362 sheep, 21%) and Bunda (30,078 sheep, 16%). Musoma Urban district had the least number of sheep (61 sheep) (Chart 3.131 and Map 3.51). However Musoma Rural district had the highest density of sheep in the region (26 head per km<sup>2</sup>) (Map 3.52).

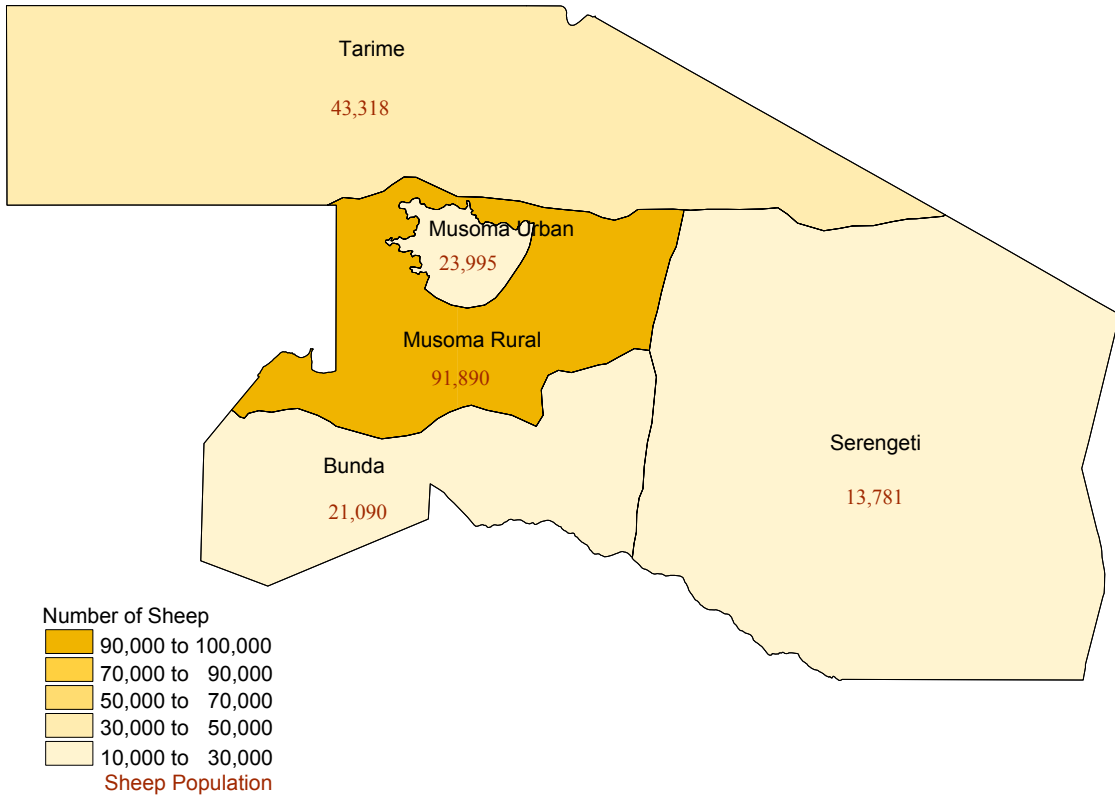

Sheep rearing was dominated by indigenous breeds that constituted 99.8 percent of all sheep kept in the region. Only 0.2 percent of the total sheep in the region were improved breeds.

## Sheep Population Trend

The overall annual growth rate of the sheep population for the eight year period from 1995 to 2003 was 1 percent. The population increased at an annual rate of 2 percent from 179,019 in 1995 to 194,036 in 1999. The sheep population remained fairly constant at around 194,000 from year 1999 to 2003 (Chart 3.132).

**MAP 3.51 MARA**  
**Sheep Population as of 1st Octobers 2003**  
**by District**

**MAP 3.52 MARA**  
**Sheep Density as of 1st October 2003**  
**by District**

**3.12.4. Pig Production**

Pig rearing is the least important livestock keeping activity in the region after cattle, goats and sheep. The region ranks 20<sup>th</sup> out of 21 Mainland regions and had 0.2 percent of the total pigs on the Mainland.

The number of pig-rearing agricultural households in Mara region was 328 (0.2% of the total agricultural households in the region) rearing 2,409 pigs. This gives an average of 7 pigs per pig-rearing household. The district with the largest number of pigs was Tarime with 2,129 pigs (88.4% of the total pig population in the region), followed by Serengeti (279 pigs, 11.6%). There was no pig rearing in the rest of the districts (Chart 3.133 and Map 3.53). However, Tarime district had the highest density (0.6 head per km<sup>2</sup>) (Map 3.54).

**Pig Population Trend**

The overall annual growth rate of the pig population for the eight years period from 1995 to 2003 was -9 percent. During this period, the pig population dropped from 5,139 to 2,409. The pig population increased from 5,139 in 1995 to 17,481 in 1999 at a rate of 36 percent, after which it decreased to 2,409 in 2003 (an annual rate of -39) (Chart 3.134).

**3.12.5 Chicken Production**

The poultry sector in Mara region was dominated by chicken production. The region contributed 4.6 percent to the total chicken population on Tanzania Mainland.

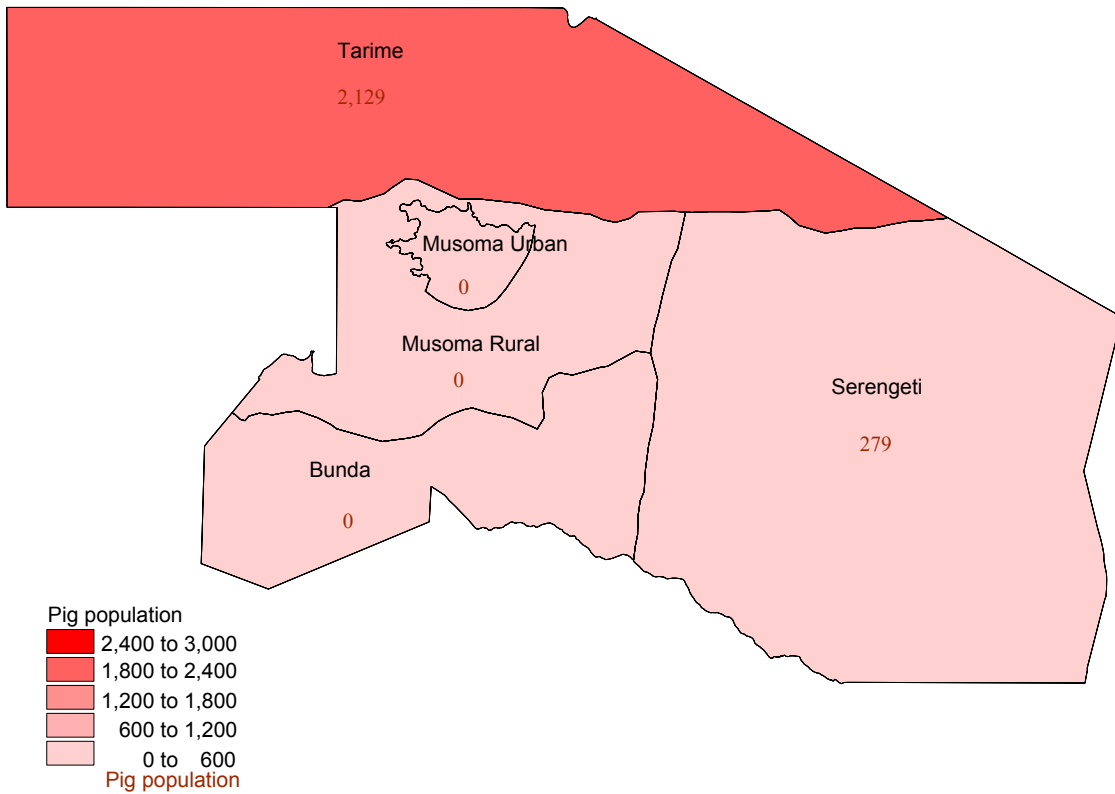

**Chicken Population**

The number of households keeping chickens was 141,825 raising about 1,521,166 chickens. This gives an average of 11 chickens per chicken-rearing household. In terms of total number of chickens in the country, Mara region was ranked 11<sup>th</sup> out of the 21 Mainland regions.

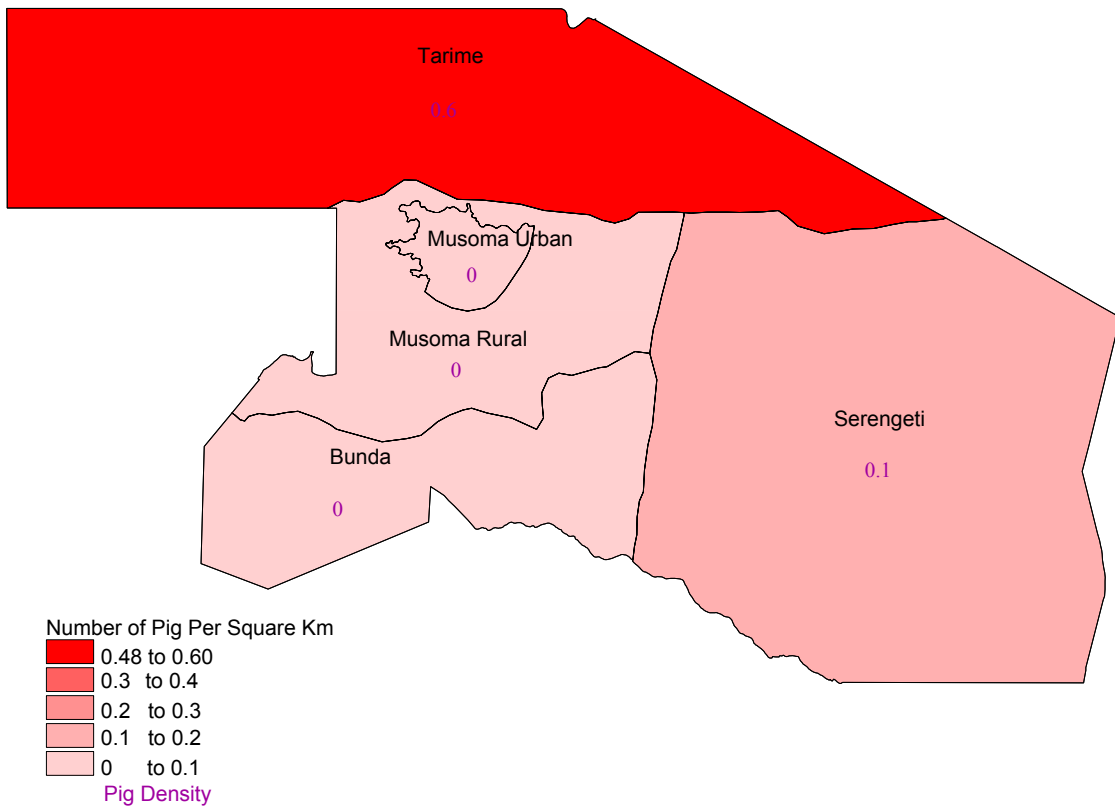

The district with largest number of chickens was Tarime with 585,983 chickens (38.5% of the total chickens in the region), followed by Musoma Rural (451,007 chickens, 29.6%), Serengeti (252,277 chickens, 16.6%) and Bunda (228,644 chickens, 15.0%). Musoma Urban district had the smallest number of chickens (3,255 chickens, 0.2%) (Chart 3.135 and Map 55). However Musoma Rural district had the highest chicken density in the region (292 chickens per km<sup>2</sup>) (Map 3.56).

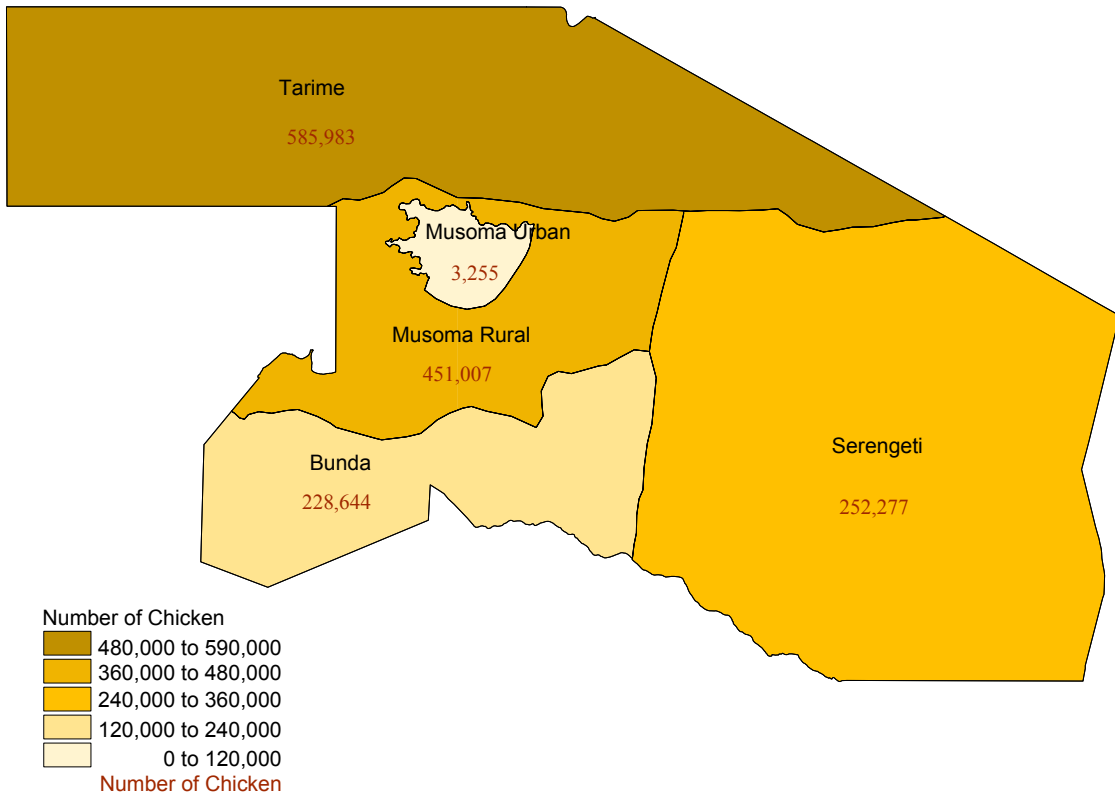

**MAP 3.53 MARA**  
**Pig Population as of 1st October 2003**  
**by District**

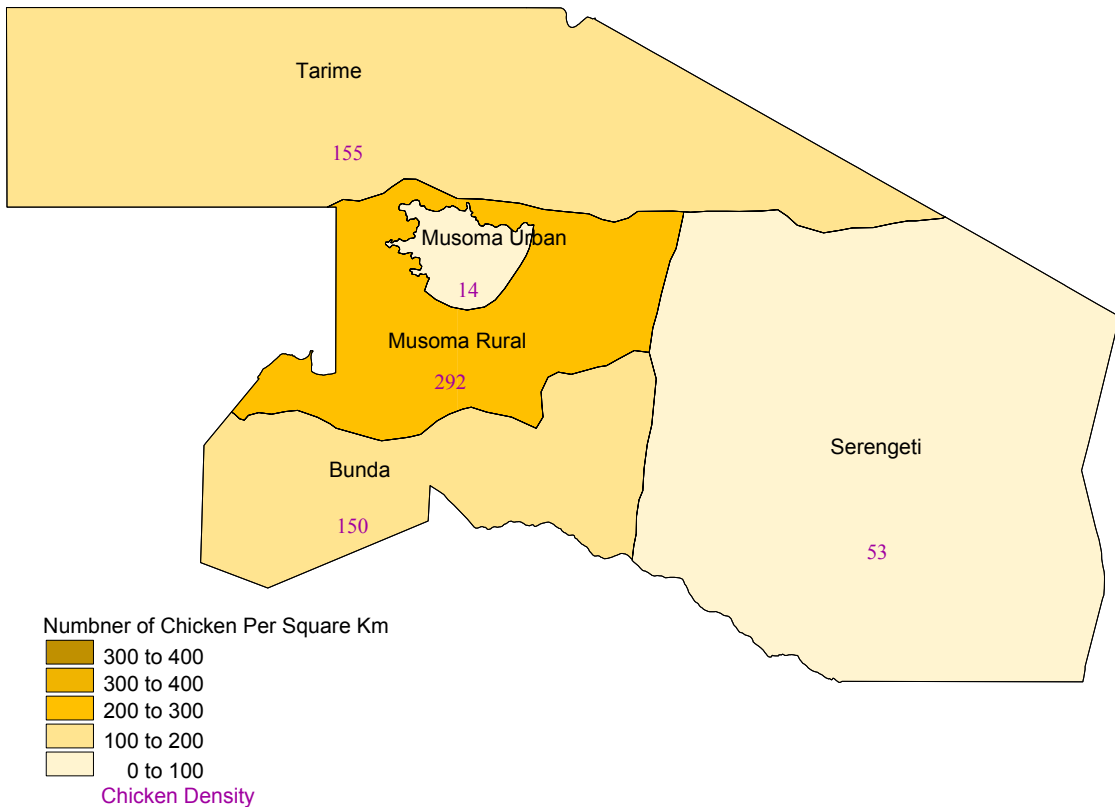

**MAP 3.54 MARA**  
**Pig Density as of 1st October 2003**  
**by District**

**MAP 3.55 MARA**  
**Number of Chicken as of 1st October 2003**  
**by District**

**MAP 3.56 MARA**  
**Density of Chicken as of 1st October 2003**  
**by District**

**Chicken Population Trend**

The overall annual chicken population growth rate during the eight-year period from 1995 to 2003 was 1.1 percent. The chicken population increased at a rate of 0.9 percent from 1995 to 1999, after which it increased at a rate of 1.2 percent for the four year period from 1999 to 2003 (Chart 3.136).

Ninety nine percent of all chicken in Mara region were of indigenous breed. The dominance of indigenous breed makes the population trend for the indigenous chicken more-or-less the same as that of the total chickens in the region.

**Chicken Flock Size**

The results indicate that about 86 percent of all chicken-rearing households were keeping 1-19 chickens with an average of 11 chickens per chicken rearing household. About 14 percent of holders were reported to be keeping the flock size of 20 to 99 chickens with an average of 28 chickens per household.

Only 0.1 percent of households kept the flock sizes of more than 100 chickens at an average of 120 chickens per household (Table 3.14).

**Table 3.14 Total Number of Households and Chickens Raised by Flock Size**

Flock Size	Number of Households	%	Number of Chicken	Average Chicken per Households
1 - 4	36,629	26	103,477	3
5 - 9	42,208	30	278,665	7
10 - 19	41,850	30	535,628	13
20 - 29	14,714	10	325,261	22
30 - 39	3,088	2	98,709	32
40 - 49	1,511	1	63,439	42
50 - 99	1,646	1	94,714	58
100+	178	0	21,273	120
<b>Total</b>	<b>141,825</b>	<b>100</b>	<b>1,521,166</b>	<b>11</b>

**Improved Chickens (layers and broilers)**

The layer population in Mara Region decreased at an overall annual rate of -4.4 percent over the period of eight years from 20,823 in 1995 to 14,561 in 2003. The number of improved chicken was most significant in Musoma Rural district followed by Serengeti district (Chart 3.137).

The overall annual growth rate for broilers during the eight-year period from 1995 to 2003 was -15.2 percent during which the population dropped from 4,426 to 1,183. The annual growth rate for the period of four years from 1995 to 1999 was 42.7 percent which resulted in an increase of broiler chicken from 4,426 to 18,383. The broiler chicken population

exhibited a decreasing trend at the rate of -49.6 percent per annum for the period of four years from 18,383 chickens in 1999 to 1,183 chickens in 2003 (Chart 3.138).

### 3.12.6. Other Livestock

There were 64,254 ducks, 12,737 turkeys, 37,053 rabbits and 3,104 donkeys raised by rural agricultural households in Mara region. Table 3.15 indicates the number of livestock kept in each district. The largest number of ducks in the region was found in Musoma Rural district with 40,623 ducks (63% of all ducks in the region), followed by Tarime (8,963 ducks, 14%), Bunda (8,167 ducks, 13%), Serengeti (4,826 ducks, 14%) and Musoma Urban (1,675 ducks, 3%). Turkeys were reported in Tarime and Serengeti districts only. The biggest number of rabbits was found in Musoma Rural district (94% of the total rabbits in Mara region), however the largest number of donkeys was found in Tarime district (35% of the total number of donkeys in the region) (Table 3.15).

**Table 3.15 Head Number of Other Livestock by Type of Livestock and District**

District	Type of Livestock				
	Ducks	Turkeys	Rabbit	Donkeys	Other
Tarime	8,963	5,782	1,333	1,071	2,522
Serengeti	4,826	6,955	419	272	4,733
Musoma Rural	40,623	0	34,865	819	9,498
Bunda	8,167	0	437	942	875
Musoma Urban	1,675	0	0	0	0
<b>Total</b>	<b>64,254</b>	<b>12,737</b>	<b>37,053</b>	<b>3,104</b>	<b>17,629</b>

### 3.12.7 Pests and Parasites Incidences and Control

The results indicate that 69 percent and 17 percent of the total livestock-keeping households reported to have encountered ticks and tsetse fly problems respectively. The census results show that there was a predominance of tick related diseases over tsetse related diseases. While incidences of tick problems were highest in Musoma Urban district and lowest in Serengeti district, tsetse flies incidences were highest in Serengeti but lowest in Musoma Rural district and no tsetse flies incidences were reported in Musoma Urban district (Chart 3.139 Map 3.57).

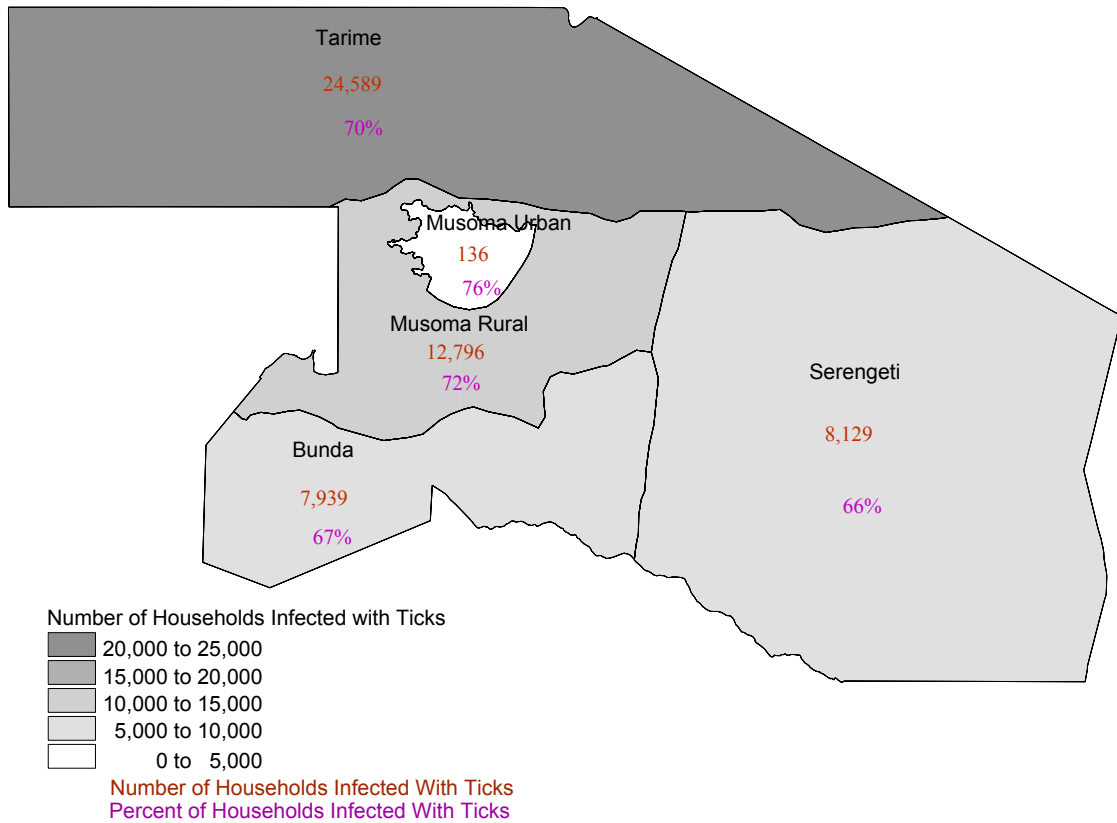

The most common method of tick control was spraying which was used by 56 percent of all livestock-rearing households having tick problems. Other methods used were dipping (4%), smearing (4%) and other traditional methods like hand picking (19%). However, 18 percent of livestock-keeping households did not use any method.

The most common method used to control tsetse flies was spraying which was practiced by 34.6 percent of livestock-rearing households. This was followed by dipping (3.4%) and trapping (3.3%) and other methods (2.8%). However, 55.9 percent of the livestock rearing households did not use any of the three aforementioned methods.

**MAP 3.57 MARA**  
**Number and Percent of Households**  
**Infected with Ticks by District**

**MAP 3.58 MARA**  
**Number and Percent of Households**  
**Using Draft Animals by District**

**De-worming**

Livestock rearing households that de-wormed their animals were 44,155 (52% of the total livestock rearing households in Mara region). The percentage of cattle keeping households that de-wormed cattle was 48 percent, goats (35.6%) and sheep (41%). The district with the highest number of households that de-wormed cattle was Tarime (48% of total households that de-wormed cattle) followed by Musoma Rural (20.2%), Serengeti (19.2%), Bunda (12.3%) and Musoma Urban (0.2%) (Chart 3.138).

**3.12.8. Access to Livestock Services**

**Access to Livestock Extension Services**

The total number of households that received livestock advice was 31,979, representing 38 percent of the total livestock-rearing households and 17 percent of the agricultural households in the region. The main livestock extension agent was the government which provided service to about 65 percent of all households receiving livestock extension services. This was followed by NGOs/development projects (12.8%), large scale farmers (8.5%) and cooperatives (7.5%).

About 58.1 percent of livestock rearing households described the general quality of livestock extension services as being good, 22.7 percent said they were average and 17.5 percent said they were very good. However, 0.3 percent of the livestock rearing households said the quality was not good and 1.4 percent described them as poor (Chart 3.141).

**3.12.8.2 Access to Veterinary Clinic**

Many veterinary clinics were located very far from livestock rearing households. About 80 percent of the livestock rearing households accessed the services, at a distance of more than 14 kms. Only 20 percent of them accessed the services within 14 kms from their dwellings (Chart 3.142).

The most affected district was Musoma Rural district with 89 percent of livestock rearing households accessing the services at a distance of more than 14 kms. Musoma Urban was the least affected because all households could access the service within a distance of 14 kilometres (Chart 3.143).

**Access to Village Watering Points/dam**

The number of livestock rearing households residing less than 5 kms from the nearest watering point was 23,302 (73% of the total livestock rearing households in Mara region), whilst 8,439 households (26%) resided between 5 and 14 kms. However, 251 households (1%) had to travel a distance of 15 or more kms to the nearest watering point (Chart 3.144).

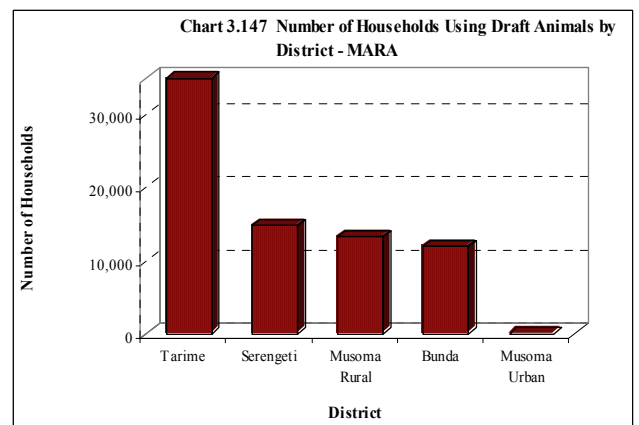

Tarime district had the best livestock water supply with the majority of livestock rearing households residing within 5 kilometres from the nearest watering point. This was followed by Musoma Rural, Bunda, Serengeti and Musoma Urban districts. In Musoma Rural district about 39 percent of the livestock rearing households had to travel a distance of more than five kilometers to the nearest watering point (Chart 3.145).

**3.12.9. Animal Contribution to Crop Production**

**Use of Draft Power**

Mara region had the fourth largest proportion of households using draft animals on Tanzania Mainland after Shinyanga, Manyara and Singida. The region had 89,548 households (48% of the total agricultural households in the region) using this technology (Chart 3.146).

The number of households that used draft animals in Tarime district was 49,457 representing 55 percent of the households using draught animals in the region followed by Serengeti (14,764 households, 16%), Musoma Rural (13,344 households,

15%) and Bunda (11,984 households, 13%). There were no households using draft animals in Musoma Urban district (Chart 3.147 and Map 3.58).

The region had 377,058 oxen that were used to cultivate 107,673 hectares of land. This represents only 9 percent of the total oxen found on the Mainland. The largest area cultivated using oxen was found in Tarime district (41,905 ha, 39% of the total area cultivated using oxen in the region). Other types of draft animals used to cultivate in Mara region were bulls (57,522 bulls, 9,659 ha), cows (13,915 cows, 3,453 ha) and donkeys (5,613 donkeys, 679 ha).

### Use of Farm Yard Manure

The number of Households using organic fertilizer in Mara region was 47,632 (26% of total crop growing households in the region) (Chart 3.148). The total area applied with organic fertiliser was 33,009 ha of which 29,792 hectares (90.3% of the total area applied with organic fertilizers or 14% of the area planted with annual crops and vegetables in Mara region during the long rainy season) was applied with farm yard manure.

The largest area applied with farm yard manure was found in Tarime district with 14,657 hectares (49.2% of the total area applied with farm yard manure in the region), followed by Musoma Rural (6,531 ha, 21.9%), Serengeti (4,758 ha, 16.0%), Bunda (3,765 ha, 12.6%) and Musoma Urban (83 ha, 0.3%) (Chart 3.149 and Map 59).

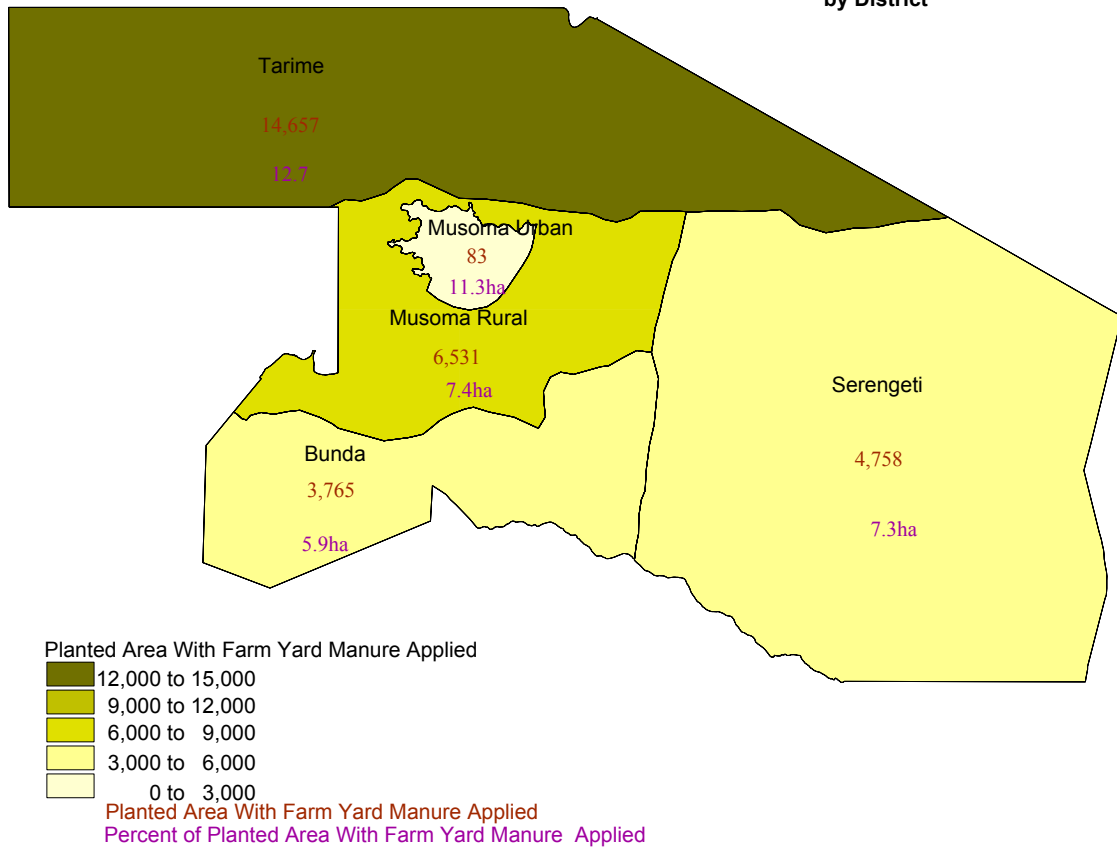

#### 3.12.9.4 Use of Compost

Only 3,217 ha (9.7% of the area of organic fertilizer application) was applied with compost. The largest area applied with compost was found in Bunda district with 2,470 hectares (77% of the total area applied with compost in Mara region), followed by Tarime (538 ha, 17%) and Serengeti (27 ha, 1%). No compost application was found in Musoma Urban district (Chart 3.149 and Map 3.60).

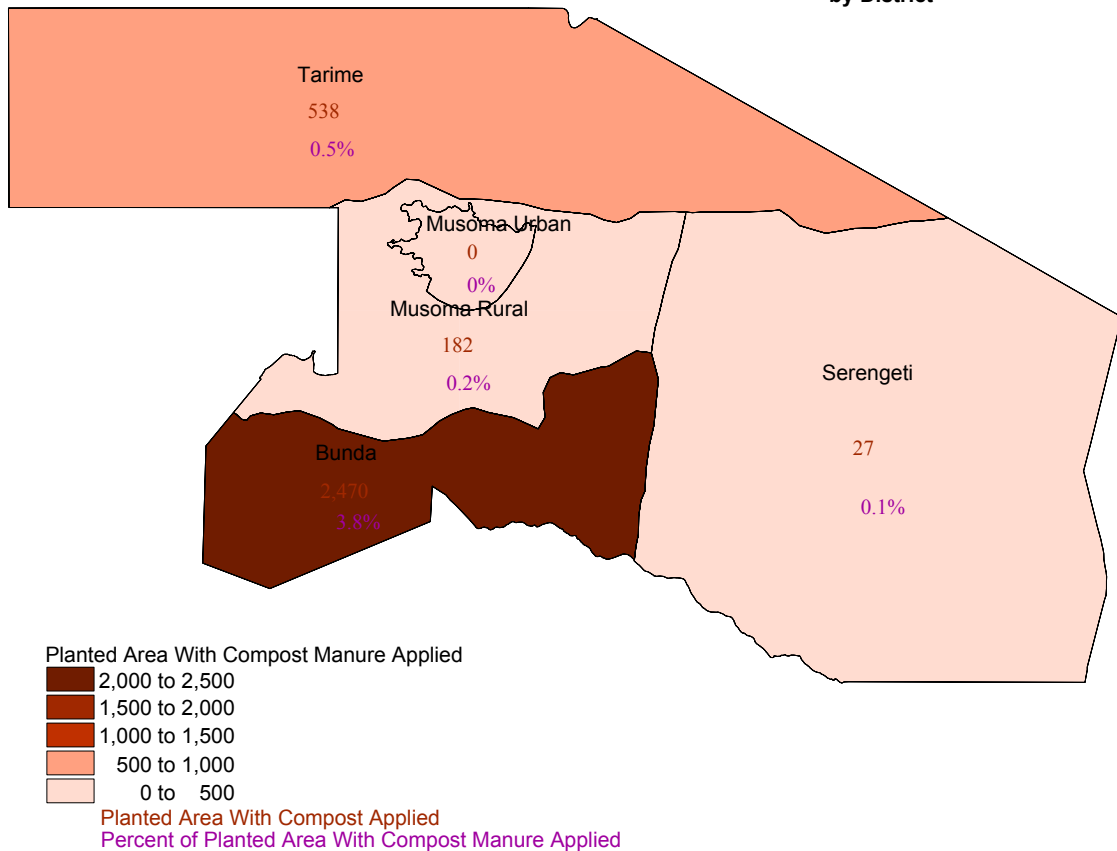

#### 3.12.10 Fish Farming

The number of households involved in fish farming in Mara region was 255, representing 0.1 percent of the total agricultural households in the region (Chart 3.150). Tarime was the only district in the region practicing fish farming. (Chart 3.151 and Map 3.61). Non governmental organizations and/or projects were the only suppliers of fingerlings. All fish farming households in the region used the dug-out-pond system and the only fish specie planted was tilapia. The number of fish harvested in Mara region was 44,845, all of which were tilapia. None of the fish farming households sold any fish.

### 3.12.11 Access to Infrastructure and Other Services

The results indicate that regional capital was located very far from most of the households' dwellings. It was located at an average distance of 81 kilometers from the agricultural household's dwellings. Other services and their respective average distances in kilometers from the households' dwellings were district capital (42), tarmac road (40), tertiary market (37), hospital (33), secondary market (13), secondary school (11), health clinic (7), primary market (6), all weather road (3), primary school (3) and feeder road (1) (Table 3.16).

**Table 3.16: Mean Distances from Household Dwellings to Infrastructures and Services by District**

District	Mean Distance to											
	Secondary School	Primary School	All weather road	Feeder Road	Hospital	Health Clinic	Regional Capital	Primary Market	Secondary Market	Tertiary Market	Tarmac Road	District Capital

Musoma Urban	4	1	0	1	6	3	6	5	28	5	5	6
<b>Overall Mean</b>	<b>11</b>	<b>3</b>	<b>3</b>	<b>1</b>	<b>33</b>	<b>7</b>	<b>81</b>	<b>6</b>	<b>13</b>	<b>37</b>	<b>40</b>	<b>42</b>

Only 8 percent of the agricultural households reported the available infrastructures and services as 'very good' whereas 14 percent reported them to be average. Twenty five percent of the agricultural households said the infrastructure and services were poor and 24 percent said they were 'no good'. Eighteen percent of the agricultural households said the infrastructure and services were good.

## 3.13 POVERTY INDICATORS

The agricultural census collected data on poverty for the purpose of providing a base for tracking progress in poverty reduction strategies undertaken by the government.

### 3.13.1 Type of Toilets

A large number of rural agricultural households in Mara region used traditional pit latrines (141,915 households, 75.4% of all rural agricultural households), 3,195

households (1.7%) used improved pit latrines, 3,255 households (1.7%) used flush toilets and 293 household (0.2%) used other toilets facilities. However, 39,544 households (21.0%) in the region had no toilet facilities (Chart 3.152).

The distribution of the households without toilets within the region indicates that 57.4 percent of them were found in Tarime district and 0.1 percent were in Musoma Urban. The percentages of households without toilets in the other districts were as follows: Serengeti (10.1%), Musoma Rural (23.4%) and Bunda (9.0%) (Map 3.62).

**3.13.2 Household’s Assets**

Radios were owned by most rural agricultural households in Mara region with 107,845 households (57.3% of the agriculture households in the region) owning them, followed by bicycles (94,942 households, 50.4%), irons (50,680 households, 26.9%), wheelbarrows (11,057 households, 5.9%), mobile phones (4,098 households, 2.2%), vehicles (1,696 households, 0.9%), television/video (1,550 households, 0.8%) and landline phones (977 households, 0.5%) (Chart 3.153).

**3.13.3 Sources of Energy for Lighting**

Wick lamp was the most common source of energy for lighting in the region, with 63.1 percent of the total rural households using this source of energy, followed by hurricane lamp (32.1%), pressure lamp (3.0%), firewood (0.7%), mains electricity (0.5%), solar (0.3%), candle (0.2%) and gas (biogas) (0.1%) (Chart 3.154).

**3.13.4 Sources of Energy for Cooking**

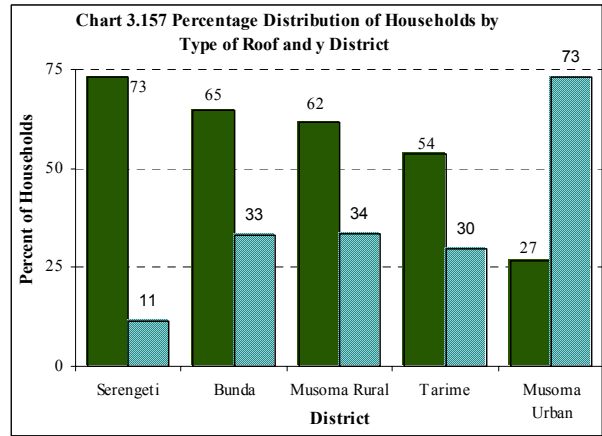

The most prevalent source of energy for cooking in Mara region was firewood, which was used by 97.3 percent of all agricultural households in the region. This is followed by charcoal (1.8%) and mains electricity (0.3%). The rest of energy sources accounted for 0.6 percent. These were bottled gas (0.22%), crop residues (0.18%), livestock dung (0.08%), paraffin/kerosine (0.07%) and solar (0.04%) (Chart 3.155).

**3.13.5 Roofing Materials**

The most common material used for roofing the main dwelling was grass and leaves and it was used by 60.4 percent of the rural agricultural households in Mara region. This was followed by iron sheets (28.7%), grass and mud (9.8%), tiles (0.6%), concrete (0.4%), asbestos (0.1%) and other materials (0.1%) (Chart 3.156).

Serengeti district had the highest percentage of households with grass/leaves roofing material in Mara region (73%), followed by Bunda (65%), Musoma Rural (62%), Tarime (54%) and Musoma Urban (27%) On the other hand, Iringa Urban district had the highest percentage of households whose roofing material for the main building was iron sheets, (73%), followed by Musoma Rural (34%), Bunda (33%), Tarime (30%) and Serengeti (10%) (Chart 3.157 and Map 3.63).

**3.13.6 Access to Drinking Water**

The main source of drinking water for rural agricultural households in Mara region was unprotected wells (39% of households use unprotected wells during the wet season and 36 percent of the households during the dry seasons). This is followed by surface water (Lake / Dam / River / Stream) (20% of households during wet season and 29% in the dry season), unprotected springs (16% of households in the wet season and 16% during dry season), protected wells (11% of households in the wet season and 10% during dry season) and protected /covered springs with 4 percent of households using the source in each season.

Other sources of drinking water and their respective percentages of households using the source for drinking water during wet and dry season were piped water (3.8% during wet season, 4.0 during dry season), uncovered rainwater catchments (2.8% during wet season, 0.3% during dry season), covered rainwater catchments (0.8% during wet season, 0.2% during dry season), water vendors (0.04% during dry season) and other unmentioned sources (2.4% during wet season) (Chart 3.158).

About 50 percent of the rural agricultural households in Mara region obtained drinking water within a distance of less than one kilometer during wet season compared to 32 percent of the households during the dry season. However, 50 percent of the agricultural households obtained drinking water from a distance of one or more kilometers during the wet season compared to 68 percent of households in the dry season. The most common distance from the source of drinking water was between 1 and 2 km (Chart 3.159).

**3.13.7 Food Consumption Pattern**

**Number of Meals per Day**

The majority of households in Mara region normally had 2 meals per day (58.4 percent of the agricultural households in the region). This was followed by 3 meals per day (39.2 percent) and 1 meal per day (2.0 percent). Only 0.3 percent of the agricultural households had 4 meals per day (Chart 3.160).

Serengeti district had the largest percent of households having one meal per day as well as the highest percent of households having 3 meals per day (Table 3.17 and Map 3.64).

**Chart 3.17: Number of Households by Number of Meals the Household Normally Takes per Day and District**

District	Number of Meals per Day								Total
	One	%	Two	%	Three	%	Four	%	
Tarime	2149	2.7	37,161	46.9	39,727	50.2	132	0.2	79,170
Serengeti	1251	4.5	8,781	31.5	17,487	62.8	346	1.2	27,864
Musoma Rural	317	0.6	39,515	79.0	10,164	20.3	0	0.0	49,995
Bunda	78	0.3	24,235	78.9	6,253	20.4	155	0.5	30,721
Musoma Urban	0	0.0	247	54.4	207	45.6	0	0.0	453
<b>Total</b>	<b>3,794</b>	<b>2.0</b>	<b>109,939</b>	<b>58.4</b>	<b>73,838</b>	<b>39.2</b>	<b>633</b>	<b>0.3</b>	<b>188,203</b>

**Meat Consumption Frequency**

The number of agricultural households that consumed meat during the week preceding the census was 130,134 (69% of the agricultural households in Mara region) with 63,808 households (49% of the households that consumed meat), consumed meat only once during the respective week. This was followed by those who had meat twice during the week (41,712 households, 32.1%). Very few households had meat four times or more during the respective week. About 58,069 agricultural households (30.8% of the agricultural households in Mara region) did not eat meat during the week preceding the census (Chart 3.161a and Map 3.65).

**Fish Consumption Frequencies**

The number of agricultural households that consumed fish during the week preceding the census was 164,796 (88% of the total agricultural households in Mara region) with 33,998 households (20.1% of those who consumed fish) consuming fish once during the respective week. This was followed by those who had fish twice (17.5%) and seven times (16.3%). In general, the number of households that consumed fish twice or more during the week in Mara region was 130,798 (79.4% of the agricultural households that ate fish in the region during the respective period). About 12.4 percent of the agricultural households in Mara region did not eat fish during the week preceding the census (Chart 3.161a and Map 66).

**3.13.8 Food Security**

In Mara region, 63,989 households (34% of the total agricultural households in the region) said they rarely experienced problems in satisfying the household food requirement, whilst 11,292 households (6%) said they sometimes experience problems. The number of households that often experienced problems was 18,820 households (10%), however 15,056 households (8%) said they always had problems in satisfying the household food requirement. About 79,045 agricultural households (42%) said they did not experience any food sufficiency problems (Chart 3.161b, Map 67).

Bunda district has the highest percent of households that have problems in satisfying their household food requirements (29% of the agricultural households always or often having food problems). The percentage of households with food problems is also higher in Tarime and Musoma Urban districts (21% and 20% respectively).

Serengeti district had the lowest percent of households that always or often face food problems (9% of the agricultural households) followed by Musoma Rural (13%) (Chart 3.161c).

**3.13.9 Main Sources of Cash Income**

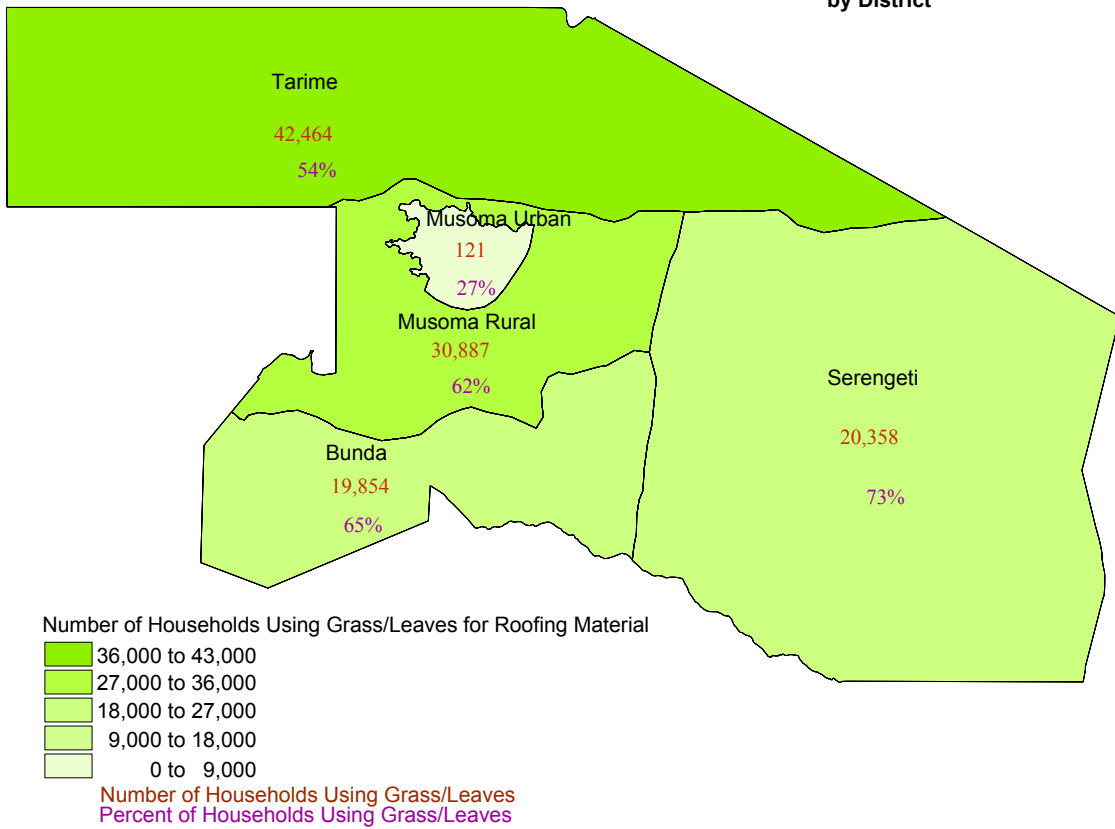

The main cash income of the households in Mara region was from selling food crops (36.1 percent of smallholder households), followed by other casual cash earnings (13.3%), businesses (11.4%), selling of cash crops (9.6%), and fishing (9.5%). Only 5.9% of

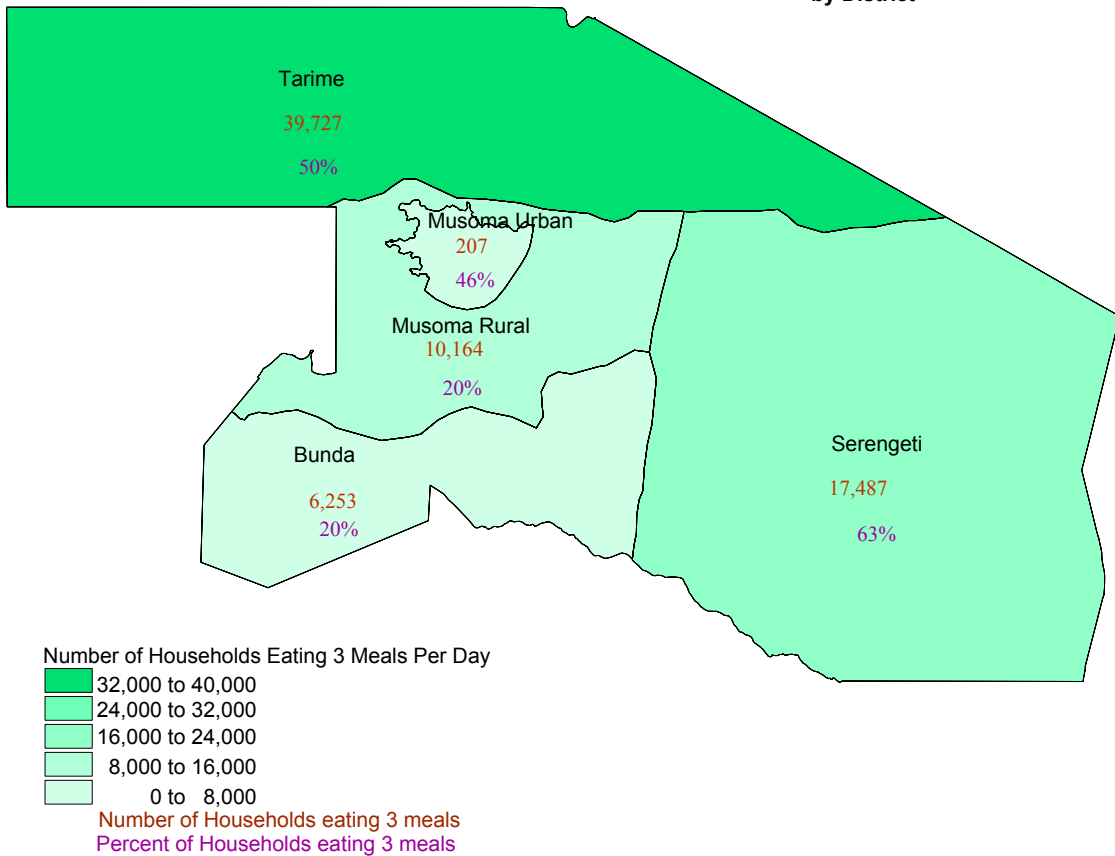

---

— smallholder households reported the sale of livestock as their main source of income, followed by cash remittance (4.9%), wages and salaries (4.6%), sale of forest products (2.2%) and sale of livestock products (1.0%) (Chart 3.162).

## PART IV: MARA PROFILES

### 4.1 Region Profile

Mara has a land area of 330,000 hectares under crop production and the number of crop growing households was small compared to most regions, however it had a relatively high number of livestock and crops growing households. The region had a moderate to high number of smallholder households per square kilometer. The land area available per household was moderate to high, however the utilized land area was below the average for the country resulting in one of the lowest land utilization rates in the country. The region had one of the highest areas of permanent mono-crops in the country. It had two seasons and the planted area in the short rainy season is about half that of the long rainy season. The average area planted per crop growing household in the long rainy season was 1.7ha and 0.9 ha in the short rainy season.

The region had a moderate to low planted area of cereals. Although maize had the largest planted area, the area of sorghum was fourth largest in the country and its production was the highest. The region had the second largest planted area of cassava, however beans and groundnuts were produced in very small quantities. The region had a moderate to low production of tomato and cabbage and produced minor quantities of onions. A small amount of cotton was grown in the region. Minor quantities of coffee, mangoes, sugar cane and oranges were also produced.

Moderate to low planted areas of irrigation exist in the region. Very few households practice irrigation and the number of households with irrigation had not changed significantly for 10 years. Most cultivation was done by using oxen. A small amount of farm yard manure was applied and virtually no pesticides are used.

Normally, storage was in locally made traditional cribs. The percentage of households selling crops was average for the country. Most processing was done using neighbours machines and only small amounts of the processed crops were sold and mostly to local markets/trade store (the highest percent using this marketing outlet in the country). The receipt of extension per household was moderate.

Mara had the fifth largest number of trees in the country and the dominant species were trichillia and eucalyptus. A moderate number of households have erosion control/water harvesting facilities and erosion control bunds was the most common followed by water harvesting bunds.

Mara region has a moderate livestock population compared to other regions. Although it is one of the smallest regions in terms of available land it has a high density of livestock. Livestock is dominated by indigenous cattle; very low numbers of improved breeds are present. Compared to other regions the density of goats is moderate. However, it has a relatively high density of goats. Sheep and pig production is insignificant in the region.

The region has a moderate population of chickens and very small numbers of improved layers and broilers. Egg production is low indicating that most chickens are kept for meat. It has a moderate milk production; however the farm gate price of milk is amongst the lowest in the country.

The area of organic fertilizer application is moderate to low compared to other regions. The use of draft animals is high however the area cultivated is comparatively low, which indicates that draft animals are probably used less for cultivation purposes.

Mara has the highest rate of foot and mouth infection and there is a high incidence of foot rot possibly a result of the wetter conditions in the region. Mara has the worst access to veterinary clinics compared to other regions. In general, access to other infrastructure and services is moderate to good. However a small number of households received extension advice. Mara Region has the eleventh highest rural agriculture population in Tanzania (1,097,741 persons of which 548,314 are males and 549,427 females). It has a moderate number of rural households involved in agriculture (188,203) compared to other regions. It has 96 percent of rural households and 76 percent of total households in the region (including urban) that are involved in agriculture. The region has the fourth highest average household size in the country (5.8 persons per household) and it has a high percent of female headed households (20%) compared to other regions. Crop only and both crop and livestock production are the important types of farming in the region. The number of livestock only households in the region is very small and it also has no pastoralist households.

Land under customary law is the predominant type of land ownership, accounting for almost 80 percent of the total rural smallholder owned land and represents the second highest in the country.. There is a small amount of land under official titles. The region has a moderate access to fields with about 45 percent of the rural agriculture households having their nearest field less than 100m from the homestead. Access from the field to the nearest road is moderate to poor compared to other regions.

Mara has a high percent of literate rural agriculture population (68%) compared to other regions, however the difference between the literacy rate of males and females is high with 13 percent more literate males than females. It has a comparatively high percent of the rural agriculture population that have completed school and a low percent of household heads with no education.

The most important livelihood activity is crop farming followed by livestock keeping and tree/forest resources. Off farm Income is the least important. The percent of the rural agriculture population working full time in farming is high (74%). The main source of cash income for Mara is from the sale of food crops and It has the highest percent of rural agriculture households depending on fishing as a source of cash income. Mara receives virtually no credit.

A low percent of households use modern roofing material in the region (around 30%) and the rest is mainly with grass/leaves/mud. The region has the third lowest number of households with no toilet facilities (21%). Energy for lighting is mainly from wick lamps (50%) and about 30 percent of households use hurricane lamps. Mara has the second lowest percent of households using piped drinking water. Most water is from unprotected wells and open water (lake/river etc) About 25 percent of households in Mara region obtain drinking water from piped supplies, with the remaining households mainly using protected and unprotected wells and open water (lake, river etc).

Most rural agriculture smallholders are living a subsistence existence. However, it has the fourth highest number of households (15%) that use over 50% of their livelihood activities for non-subsistence purposes. It has the lowest number of households that do not eat animal protein in one week and the highest percent of households that eat animal protein every day. Most households in the region either never or seldom face problems with food shortage. The region has poor access to services and infrastructure in the country. About 60% of the households reported insufficiency of land which is the third highest in the country.

---

## 4.2 DISTRICT PROFILES

The following district profiles highlights the characteristics of each district and compares them in relation to population, main crops and livestock, production and productivity, access to services and resources and levels of poverty.

### 4.2.1 Tarime

Tarime district had the largest number of households in the region and it had the third highest percent of households involved in smallholder agriculture in the region. Most smallholders were involved in crop and livestock production, followed by crop production only. It had a very small number of households involved in livestock keeping only and no pastoralists were found in the district.

The most important livelihood activity for smallholder households in Tarime district was annual crop farming, followed by forestry products and permanent crop farming. However, the district had the second lowest percent of households with off-farm activities and the second highest percent of households with more than one member with off-farm income. Compared to other districts in the region, Tarime had the second highest percent of female headed households (24.8%) and it had the second lowest average age of the household head. The district had the lowest average household size in Mara region (4.9 members per household). Tarime had the second highest literacy rate among smallholder household members and second lowest literacy rate for the heads of household in the region.

It had the second lowest utilized land area per household (1.5 ha) and the allocated area was almost fully utilized (77% land utilization) indicating an impending high level of land pressure. The district had the largest total planted area and the second smallest area per household (1.5 ha).

The district was the largest maize and sorghum production in the region with a planted area of 39,273 and 22,060 hectares respectively, however the planted area of maize per maize growing household was the second lowest in the region. Paddy production with a planted area of 872 ha (18% of the total planted area in the region). The district was the second largest producer of finger millet in the region and had the largest area planted with cassava. The district was the second largest producer of sweet potatoes with a planted area of 4,347 ha accounting for 26.2 percent of the total area planted with sweet potatoes in the region. Although the district had the second lowest area planted with beans in the region, the area planted with beans is relatively large (2,035 ha). Oilseed crops were not important in Tarime, it had a moderate area planted with groundnuts compared to other districts in the region. Vegetable production was important in the district. It had the largest planted area with spinach (78% of the total area planted with spinach in the region), onions (76%), cabbages (51%) and tomatoes (49%). It was the only district in which garlic and ginger are produced.

Tarime had the largest planted area with permanent crops which was dominated by banana (3,923 ha), followed by coffee (3,687 ha). Other permanent crops were grown in small quantities.

As with other districts in the region, most land clearing and preparation was done by hand. It had also the largest area of bush clearance in the region, however it had the largest area of land prepared using oxen.

Tarime had the largest area planted with improved seed and the largest area planted with fertilizers (farm yard manure, compost and inorganic fertiliser) in Mara. However, most of the applied fertilizer was farm yard manure. Compared to

other districts in the region, Tarime district had the lowest level of insecticide/fungicide use. It had the second largest area with irrigation compared to other districts having 634 ha of irrigated land. The most common sources of water for irrigation were rivers and wells using hand buckets. Hand buckets/watering cans were the most common means of irrigation water application and very little hand pump was used.

The most common method of crop storage was locally made traditional structures followed by sacks/open drums and the proportion of households storing crops in the district was moderate. The district had the largest number of households selling crops, however for those who did not sell, the main reason for not selling was insufficient production. The proportion of households processing crops was moderate and more than 50 percent were processed using neighbor machines. The district had the second highest percent of households selling processed crops to large scale farms compared to other districts and no sales were made to marketing cooperatives and farmers associations. No households reported to have accessed agricultural credit.

The district had the smallest proportion of households receiving extension services in the region and almost all of this was from the government. The quality of extension services was rated between good and average by the majority of the households (80%).

Tree farming was very important in Tarime district (with 3,598,493 planted trees) and the trees were mostly eucalyptus and trichillia spp. The number of households with erosion control and water harvesting structures in Tarime district was moderate and most of them were erosion control bunds, however it also had the largest number of terraces in the region.

The district had the largest number of cattle, goats and sheep in the region and they were almost all indigenous. Tarime also had the highest number of pigs and chickens. The latter was dominated by indigenous chickens. Small numbers of ducks, turkeys, rabbits and donkeys were also found in the district. It had the largest number of households reporting tsetse and tick problems in the region and it had the largest number of households de-worming livestock. The use of draft animals in the district was most prominent and it was the only district in the region in which fish farming was practiced.

It is amongst the districts with the best access to feeder roads in Mara region. However, it had one of the worst access to health clinics, primary markets, tertiary markets and district capital.

Tarime district had the highest percent of households with no toilet facilities and it had one of the highest percent of households owning radios, bicycles and irons. The most common source of energy for lighting was the wick lamp and practically all households used firewood for cooking. The district had relatively high percent of households with grass roofs (53.6%) and 29.9 percent of households having iron sheet roofs. The most common source of drinking water was unprotected wells. It had the second highest percent of households having three meal per day compared to other districts. The district had the second lowest percent of households that did not eat meat during the week prior to enumeration, however it had the highest percent of households that did not eat fish during that period. Most households seldom had problems with food satisfaction.

#### **4.2.2 Serengeti**

Serengeti was the second district with the least number of households in the region and it was the district with the second highest percent of households involved in smallholder agriculture in the region. Most smallholders were involved in crop

---

production only, followed by crop and livestock production and livestock keeping only. No pastoralists were found in the district.

The most important livelihood activity for smallholder households in Serengeti district was annual crop farming, followed by tree/forestry resources and permanent crop farming. However, the district had the lowest percentage of households with off-farm activities and the lowest percentage of households with more than one member with off-farm income. Compared to other districts in the region, Serengeti had moderate percentage of female headed households (24.1%) and it had the lowest average age of the household head in the region (6.1 members per household). The district had the second lowest average household size in the region. Serengeti had a comparatively low literacy rate among smallholder household members, however it had the lowest literacy rate for the head of households.

It had the largest utilized land area per household (2.5 ha) and the lowest proportion of the allocated area was utilized (75% land utilization). The district had moderate planted area as well as planted area per crop growing household (2.4 ha).

Maize production in the district was moderate compared to other districts in the region with a planted area of 17,490 ha and the planted area per household was also moderate. Bulrush millet production was less important with a planted area of only 27 hectares. The district was the second sorghum producer in the region. While paddy production was not important, it had the largest planted area for finger millet. Serengeti had the second smallest area planted with cassava as well as sweet potatoes and the second largest area planted with Irish potatoes. While bean production in the district was moderate, it had the largest area planted with cowpeas. Serengeti district had the second smallest groundnuts planted area in Mara region with area planted per groundnut growing household of 0.25 ha. Vegetable production was not important in the district. Though small the district had the second largest planted area with onions and spinach.

Compared to other districts in the region, Serengeti had a moderate area with permanent crops which were dominated by oranges (677 ha), banana (257 ha) and mandarine/tangerine (199 ha). Other permanent crops were either not grown or were grown in very small quantities.

As with other districts in the region, most land clearing was done by hand, however the second largest land area prepared by oxen in the region.

Serengeti had the second smallest planted area with improved seed in Mara region, however it had the lowest proportion of households using improved seeds. The district had the second lowest planted area with fertilizers (farm yard manure, compost and inorganic fertiliser), and most of this was farm yard manure. Compared to other districts in the region, Serengeti district had a moderate level of insecticide use. The use of fungicides was the second highest in the region. It had the smallest proportion of planted area applied with herbicides in the region. It had the second smallest area with irrigation compared to other districts, with 109 ha of irrigated land. The most common sources of water for irrigation were from rivers and wells using hand buckets. Buckets/watering cans were the most common means of irrigation water application.

The most common methods of crop storage in Serengeti district were locally made traditional structures and sacks and/or open drum; however the proportion of households storing crops in the district was the highest in the region. Serengeti

district had the highest proportion of households selling crops, however for those who did not sell, the main reason for not selling was insufficient production. Serengeti had the highest percent of households processing crops in Mara region and 93 percent of those households used neighbours machine. The district also had the highest percent of households selling processed crops to secondary markets and marketing cooperatives than other districts in the region. No sales were made to farmers associations and traders at farm. Serengeti was the only district in the region in which both male and female headed households accessed agricultural credits. The main source of credit was traders/trade stores, followed by family, friends and relatives.

A comparatively low number of households received extension services in Serengeti district and 98.8 percent of this was from the government. The quality of extension services was rated between good and average by the majority of the households (83.3%).

The district had moderate number of trees in the region (with 344,415 planted trees) and most of these were eucalyptus spp. Serengeti district had a relatively small number of households with erosion control and water harvesting structures and most of them were erosion control bunds, however it also had the a number of tree belts and water harvesting bunds.

The district had the third lowest number of cattle in the region and they were almost all indigenous. While the district had the second smallest number of goats in the region, it also had the second largest number of sheep. The district was among two districts in the region in which pig rearing was practiced and had the second largest number of pigs in the region after Tarime district. Some ducks, turkeys, rabbits and donkeys were also found in the district. The number of households reporting tick problems in Serengeti district was relatively small, however the district had the largest proportion of households reporting tsetse problems in the region. It also had a moderate proportion of households de-worming livestock. The district had the second number of households using draft animals in the region. There was no fish farming in Serengeti district.

It is amongst the districts with the best access to primary schools, however it had one of the worst access to all weather roads, feeder roads, primary markets, tarmac roads and regional capital.

The percentage of households without toilet facility in Serengeti district was 14 and it was among the districts with the lowest percent of households owning mobile phones, bicycles and televisions/videos in the region. The most common source of energy for lighting was the wick lamp and practically all households used firewood for cooking. The roofing materials for most of the households in the district were grass and leaves (73.1%), however the district had the lowest percent of households with iron sheet roofing (11.4% of households in the district). The most common source of drinking water was unprotected wells. It had the highest percent of households having three meals per day. The district had the lowest percent of households that did not eat meat and the highest percentage of households that did not eat fish during the week prior to enumeration, however it had the lowest proportion of households who were always facing food shortage.

#### **4.2.3 Musoma Rural**

Musoma Rural district had the second largest number of households in the region and the highest percent of households involved in smallholder agriculture in the region. Most smallholders were involved in crop production only, followed by those involved in both crop and livestock production and livestock keeping only. No pastoralists were found in the district.

The most important livelihood activity for smallholder households in Musoma Rural district was annual crop farming, followed by tree/forestry resources and off farm input. However, the district had moderate percent of households with no off-farm activities as well as moderate percentage of households with more than one member with off-farm income. Compared to other districts in the region, Musoma Rural had the lowest percent of female headed households (20.3%) and it had the third highest average age of the household head in the region. The district had one of the highest average household size (6.7 members per household) in the region. Musoma Rural had a comparatively moderate literacy rate among smallholder households and this was reflected by the concomitant relatively moderate level of school attendance in the region. However, it had the highest literacy rate for the heads of household in the region.

It had a slightly lower utilized land area per household (1.84 ha) than the regional average of 1.9 ha and 75 percent of the allocated area is currently being utilized. The district had the second largest planted area and the third lowest area planted per crop growing household in the region (2.6 ha).

The district was the second maize producer in the region with a planted area of about 19,326 ha. Sorghum and finger millet production were not important with a planted areas of only 5,751 and 1,742 hectares respectively. The district had the second largest area of cassava accounting for 36 percent of the cassava planted area in the region, however Irish potato production was not important. Sweet potato production in the district was relatively important accounting for 45 percent of the total area planted with sweet potatoes in the region. Beans production is important with a planted area of 4,173 ha which was the largest in the region accounting for 36 percent of the total area planted with beans in the region. Oilseed crops were important in Musoma Rural with 40 percent of the total groundnuts grown in the region. Vegetable production was moderate. Though small, the district had the largest planted area of tomatoes and cabbage in the region.

Annual cash crop production was important in the district. It had the largest area planted with tobacco and the second largest area planted with cotton.

Permanent crops were of little importance in Musoma Rural district (6.3% of the total permanent crop planted area in Mara region was found in the district). The most prominent permanent crop in the district pigeon was mango (531 ha) accounting for 50 percent of the total area planted with permanent crops in the district (1,056 ha), followed by banana (188 ha), oranges (113 ha), pawpaw (78 ha) and sugarcane (65 ha). Other permanent crops were either not grown or were grown in very small quantities.

As with other districts in the region, most land clearing was done by hand, however it had the second largest area planted with “no land clearing” indicating the presence of a large area of bare land before cultivation. The district had the smallest area cultivated using oxen in the region.

Musoma Rural district had a moderate area planted with improved seed in Mara region. The district also had the second largest proportion of planted area with fertilisers (farm yard manure, compost and inorganic fertiliser), most of this being farm yard manure. Compared to other districts in the region, Musoma Rural district had the highest proportion of planted area applied with fungicides. However, it has a small proportion of planted area with insecticides and largest proportion of planted area applied with herbicides. It had the second largest area with irrigation compared to other districts with 554 ha of irrigated land. The main sources of water for irrigation in the district were from wells and rivers using hand buckets. Buckets/watering cans were the main means of irrigation water application.

The most common method of crop storage in Musoma Rural was in sacks/open drums and in locally made traditional structures, however the percent of households storing crops in the district was the second lowest in the region. The district had moderate percent of households selling crops, however for those who did not sell, the main reason for not selling was insufficient production. Musoma Rural had the second lowest percentage of households processing crops, with 63 percent of the households processing by neighbours machines and 34 percent processing on farm by hand. The district was one of the districts with the lowest percent of households selling processed crops. The district had the second highest percentage of households receiving credit in the region, all of which were for the female headed households. All credits were provided by saving and credit societies.

A moderate number of households received extension services in Musoma Rural district and almost all of this was from the government. The quality of extension services was rated between good and average by the majority of the households.

Tree farming was moderately important in Musoma Rural district (with 497,262 planted trees) and most trees were gravellis with some calophlum inophylum spp. The highest proportion of households with erosion control and water harvesting facilities was found in Musoma Rural district and most of them are erosion control bunds and water harvesting bunds.

The district had the second smallest number of cattle in the region, however it had the largest number of dairy cattle in the region. Although the district had the second largest number of goats in the region it had the third largest number of sheep. It had the largest number of chicken in the region but there were no pig rearing. The district had the largest number of improved chickens dominated by layers. It also had the largest number of ducks and rabbits in the region and a moderate number of donkeys. No turkeys were found in the district. The second largest number of households reporting tick problems was found in Musoma Rural district, however the district had the smallest number of households reporting tsetse problems in the region. The district had the second highest proportion of household de-worming livestock. The use of draft animals in the district was the largest in the region. There was no fish farming in the district.

It is amongst the districts with the best access to feeder roads, primary schools primary markets and all weather roads, however it had one of the worst access to hospitals, tertiary markets and district capital.

Musoma Rural district had the second highest percent of households with no toilet facilities. The most common source of energy for lighting was the wick lamp and a large proportion of households (98%) used firewood for cooking. The district had the third largest percent of households with grass/leaves roofing, however it had second highest percent of households with iron sheets roofing (33.5%). The main source of drinking water was the unprotected wells. Musoma Rural had the largest proportion of households having two meals per day and smallest proportion of households having three meals per day. The district had the lowest percent of households that ate meat three times during the week prior to enumeration, however it had the highest percent of the households that consumed fish six times during that particular week. The district had the highest percent of households that never experience food shortage problems.

#### **4.2.4 Bunda**

Bunda district had the third largest number of households in the region, however it had the second smallest percentage of households involved in smallholder agriculture in the region. Most smallholders were involved in crop farming only,

---

followed by crop and livestock production. Very few households were involved in livestock keeping only. No pastoralists were found in the district.

The most important livelihood activity for smallholder households in Bunda district was annual crop farming, followed by tree/forest resources, off farm income, permanent crop farming, livestock keeping/herding, remittances and fishing/hunting and gathering. The district had the highest percent of households with off-farm activities however it had the second lowest percent of households with more than one member with off-farm income. Compared to other districts in the region, Bunda had the second lowest percent of female headed households (21%) and it had the second highest average age of the household head. The average household size of 6.7 members per household was one of the highest in the region. The literacy rate among smallholder households in Bunda was the lowest compared to other districts in the region and this is associated with this was the relatively higher proportion of household members who have never attended school. The district had a moderate literacy rate for the heads of households

It had the second largest utilized land area per household (2.5 ha) and 77 percent of the allocated area was being utilized. The district had the second smallest total planted area in the region and the largest average area planted per household (3.4 ha) in the region. However, the district had the second smallest planted area per household in the long rainy season (2.1 ha) and largest area planted per household during short season (1.3 ha).

Maize production with a planted area of 15,668 ha was moderate, however the planted area per household was the largest in the region. Finger millet production with a planted area of 1,433 hectares was not important in the region, however, the district had the third largest planted area of sorghum (10,188 ha). The district had the second smallest area planted with paddy in the region, however it had largest area planted with cocoyams (101 ha), a moderate planted area of cassava (16,599 ha) and the third largest planted area for sweet potatoes (2,633 ha). It also had the largest area planted with chickpeas and second largest planted area with beans (2,974 ha). Oilseed crops were of moderate importance in Bunda with the second largest planted area of groundnuts (361 ha) as well as second largest planted area for simsim in the region. Vegetable production was not important in the district, however tomatoes, onions, cabbages and amaranths were produced in very small quantities. Bunda district was important for cotton production accounting for 55 percent of the total area planted with cotton in the region.

Compared to other districts in the region, Bunda had the third largest area planted with permanent crops which were dominated by pawpaw (747 ha), mango (348 ha), malay apple (92 ha) and oranges (60 ha). Other permanent crops were either not grown or were grown in small quantities.

Most land clearing was done by hand slashing, however it had the largest area planted with “no land clearing” indicating the presence of a large area of bare land before cultivation. Most land preparation was done by oxen, followed by hand cultivation. Compared to other districts, Bunda district had the smallest land prepared by tractor.

Bunda had the highest proportion of area planted with improved seed in Mara region. The use of fertilizer was moderate compared to other districts and most of it was farm yard manure and compost. It had a relatively small area applied with inorganic fertilizers. Compared to other districts in the region, Bunda district had the smallest percentage of the planted area in the district with fungicides application and the second smallest area of herbicide use. The district had the largest

---

percent of area planted with insecticide use. It had the third largest area with irrigation with a planted area of 181 ha under irrigation. The sources of water for irrigation were the lake, rivers and wells using hand buckets. Buckets/watering cans were the main means of irrigation water application in the district, followed by flood.

The most common method of crop storage in Bunda district was in sacks/open drums, however the proportion of households storing crops in the district was the second highest when compared to other districts in Mara region. The district had the second lowest proportion of households selling crops, however for those who did not sell, the main reason for not selling was insufficient production. Bunda had the second highest percent of households processing crops and was mostly done by neighbours machines. The district had the highest percent of households selling processed crops to large scale farms. There was no access to agricultural credit in the district.

The district had the highest proportion of households receiving extension services in the region and mostly was from the government. The quality of extension services was rated between good and average by the majority of the households.

Tree farming was not important in Bunda (with 95,956 trees) and most trees were *azadrachta* spp with some *acacia* spp. A small number of households had erosion control and water harvesting structures in Bunda district, most of which were erosion control bunds and water harvesting bunds.

The district had the second largest number of cattle in the region comprised of indigenous breeds only. While goat population was moderate, sheep population was the second smallest in the region. There was no pig rearing in the district, however it had the second smallest number of chicken in the region, dominated by indigenous breeds. It had a considerable number of ducks, a small numbers of rabbits and the second largest number of donkeys. It had the second lowest proportion of households reporting ticks problems and third largest proportion of households reporting tsetse fly problems in the region. It had the second largest number of households de-worming livestock compared to other districts. Use of draft animals in the district was moderate and fish farming was not practiced.

It was amongst the districts with the best access to feeder roads and secondary markets, however it had one of the worst access to secondary schools.

Bunda district had the second lowest percentage of households with no toilet facilities. It had the lowest proportion of households with landline phones and vehicles; however it had the largest proportion of households with bicycles. It had the largest proportion of households using hurricane lamps and pressure lamps; however it was the only district in the region with households using cow dung as source of energy for cooking. The main source of energy for lighting was the wick lamp and the largest percent of households used firewood for cooking. The district had the second highest percent of households with grass/leaves roofs and 33 percent of households in the district had iron sheet roofing. The main sources of drinking water were the unprotected wells and surface water (lake/river/dam/stream). It had the second smallest percentage of households having three meals per day. The district had the highest percentage of households that did not eat meat and moderate to low percentage of households that did not eat fish during the week prior to enumeration. The district had the highest proportion of households that always face food problems.

#### **4.2.5 Musoma Urban**

Musoma Urban district had the smallest number of households as well as the smallest proportion of households involved in smallholder agriculture in the region. Most smallholders were involved in crop farming only, followed by those involved in

---

both crop and livestock production. Very few households were involved in livestock keeping only. No pastoralists were found in the district.

The most important livelihood activity for smallholder households in Musoma Urban district was annual crop farming, followed by off farm income, permanent crop farming and tree/forest resources. However, the district had the second lowest proportion of households with no off-farm activities and the highest percent of households with more than one member with off-farm income compared to other districts in the region. Musoma Urban had the highest percentage of female headed households in the region (28%) and it had the highest average age for the household head. Its average household size of 6.4 members per household was the third largest in the region. Musoma Urban had the highest literacy for smallholder households members and this was reflected in the relatively high level of those attending school in the region. The literacy rate for the heads of household was the second highest in the region.

It had the lowest utilized land area per household (0.8 ha) in the region and 84 percent of the available land is currently being utilised. Compared to other districts in the region, the total planted area was the smallest, however it had the second largest planted area per household during long rainy season (3.1 ha) and the smallest planted area per household during the short rainy season (0.3 ha).

The district had the smallest area planted with maize and smallest area planted per maize growing household in the region. The district had the lowest planted area of paddy (7 ha) and sorghum (1 ha). Finger millet was not grown in the district. Cassava and sweet potato production were small accounting for only 0.5 and 0.4 percent of the cassava and sweet potato planted area in the region respectively. The production of beans in Musoma Urban was comparatively small (6 ha) and the area planted with bambara nuts was also very small (4 ha). Oilseed crops were not important in Musoma Urban, with the smallest area planted with groundnuts in the region. The district had the smallest area planted with fruits and vegetables in the region which were dominated by tomatoes (11 ha).

Compared to other districts in the region, Musoma Urban had a small planted area with permanent crops which were dominated by mango (317 ha). Small quantities of pawpaw, banana and avocado were also grown. Other permanent crops were either not grown or were grown in very small quantities.

The only practiced land clearing method in the district was by hand slashing and land preparation method was also done by hand.

Musoma Urban had the smallest proportion of its planted area applied with fertilizers (compost, farm yard manure and inorganic manure), however most of this was farm yard manure. It had the second smallest proportion of area planted with improved seeds, however the district had the second lowest level of insecticide use and moderate level herbicide use. However, the use of fungicides was the second highest in the region. It had the smallest irrigated area (12 ha). The main source of water for irrigation was from wells using hand buckets. Buckets/watering cans were the only available means of irrigation water application.

The most common method of crop storage was in sacks/open drums. The proportion of households storing crops in the district was the lowest in the region. The district had the smallest proportion of households selling crops, however for those that did not sell, the main reason for not selling was insufficient production. The smallest percent of households

---

processing crops in Mara region was found in Musoma Urban district and most of the the processing was done on farm by hand, followed by neighbours' machines. Virtually no processing was done on farm by machine, however the district had the highest proportion of households processing by trader. The district had a small number of households selling processed crops mostly to neighbours and local markets/trade stores. There was no access to agricultural credit in the district.

A comparatively low number of households received extension services in Musoma Urban district and a large percentage of this was from the government. The quality of extension services was rated between "very good" and "good" by the majority of the households.

Tree farming was relatively unimportant in Musoma Urban (with 3,958 planted trees) and most of the trees were *gravellis* spp. The district had a relatively small number of households with erosion control and water harvesting structures mostly erosion control bunds and water harvesting bunds.

The district had the second smallest number of cattle in the region and these were dominated by indigenous breeds. There was no pig husbandry in Musoma Urban district. It had the smallest number of goat, sheep and chicken populations compared to other districts in the region with a small broilers population. Small numbers of ducks were also found in the district. Whilst a small number of households reported tick related problems in the district, there were no households reporting tsetse related problems, however the district had the smallest proportion of households de-worming livestock. Use of draft animals in the district was not reported and no fish farming was practiced.

It was among the districts with the best access to primary schools, all weather roads, secondary schools, hospitals, regional capital, tertiary markets, district capital, feeder roads, health clinics and tarmac roads; however it had one of the worst accesses to secondary markets.

Musoma Urban district had the lowest percent of households with no toilet facilities and it had the highest proportion of households owning radios, irons, landline phones, mobile phones, vehicles and televisions/videos. The main source of energy for lighting was the wick lamp. Most households used firewood for cooking, however the district had the highest percent of households in the region that used electricity for cooking. It was the district with the lowest percent of households with grassy/leaves roofing, and 73 percent of households having iron sheet roofing. The most common sources of drinking water were surface water (lake/river/dam/stream) and piped water. It had the least percentage of households having one meal per day compared to other districts, however most households normally had 3 meals per day. The district had the second highest percent of households that did not eat meat during the week prior to enumeration, however it had the lowest percent of households that did not eat fish during the respective period. Most households never had problems with food satisfaction.

**4. APPENDICES**

**Appendix I Tabulation List..... 115**

**Appendix II Tables..... 128**

**Appendix III Questionnaires ..... 268**

## APPENDIX I: CROP TABULATION

<b>TYPE OF AGRICULTURE HOUSEHOLD.....</b>	<b>128</b>
2.1 Number of Agricultural Households by type of household and District during 2002/03 Agriculture Year .....	129
2.2 Number of Agriculture Households By Type of Holding and District during 2002/03 Agricultural Year.....	129
<b>NUMBER OF AGRICULTURE HOUSEHOLDS .....</b>	<b>130</b>
3.0 Number of Agricultural Households and Average Household Size By Sex of the Head of Household and District, 2002/03 Agricultural Year.....	131
3.1 The livelyhood Activities/Source of Income of the Households Ranked in Order of Importance by District.....	131
<b>RANK OF IMPORTANCE OF LIVELIHOOD ACTIVITIES.....</b>	<b>132</b>
3.1a First Most Importance .....	133
3.1b Second Most Importance.....	133
3.1c Third Most Importance.....	133
3.1d Fourth Most Importance.....	133
3.1e Fifth Most Importance.....	133
3.1f Sixth Most Importance .....	134
3.1g Seventh Most Importance.....	134
<b>HOUSEHOLDS DEMOGRAPHYS.....</b>	<b>136</b>
3.2 Number of Agricultural Household Members by Sex and Age Group for the 2002/03 Agricultural Year (row %).....	137
3.3 Number of Agricultural Household Members By Sex and Age Group for the 2002/03 Agricultural Year (Column %) .....	137
3.4 Number of Agricultural Household Members By Sex and District for the 2002/03 Agricultural Year.....	138
3.5 Number of Agriculture Household Members 5 years and above Who Can Read and Write Languages by Type of Language and District, 2002/03 Agricultural Year .....	138
3.6 Number of Agricultural Household Members 5 years and above By School Attendance and District, 2002/03 Agricultural Year.....	138
3.7 Number of Agricultural Household Members by Main Activity and District .....	138
cont... Number of Agricultural Household Members by Main Activity and District .....	139
cont... Number of Agricultural Household Members by Main Activity and District .....	139
3.8 Number of Agricultural Household Members by Level of involvement in Farming Activity and District, 2002/03 Agricultural Year.....	139
3.9 Number of Agricultural Household Members by Level of Formal Education Completion and District, 2002/03 Agricultural Year.....	140
cont... Number of Agricultural Household Members by Level of Formal Education Completion and District, 2002/03 Agricultural Year.....	140
cont... Number of Agricultural Household Members by Level of Formal Education Completion and District, 2002/03 Agricultural Year.....	140
cont... Number of Agricultural Household Members by Level of Formal Education Completion and District, 2002/03 Agricultural Year.....	140

3.14	Time Series of Male and Female Headed Households .....	141
3.15	Literacy Rate of Heads of Households by Sex and District .....	141
3.16	Number of Agricultural Households by Number of Household Members Involved in Off Farm Income Generating Activities and District, 2002/03 Agricultural Year.....	141
<b>LAND ACCESS/OWNERSHIP .....</b>		<b>142</b>
4.1	Number of Farming Households By Type of Land Ownership/Tenure and District for the 2002/03 Agricultural Year.....	143
4.2	Area of Land (ha) by Ownership/Tenure (Hectare) and District for the 2002/03 Agricultural Year .....	143
<b>LAND USE .....</b>		<b>144</b>
5.1	Number of Agricultural Households By Type of Land Use and District for the 2002/03 Agricultural Year.....	145
5.2	Area of Land (Ha) by type of Land Use and District for the 2002/03 Agricultural Year.....	145
5.3	Number of Agricultural Households by Whether All Land Available to the Household Was Used and District, 2002/03 Agricultural Year.....	146
5.4	Number of Agricultural Households by whether they consider Having Sufficient Land for the Household and District, 2002/03 Agricultural Year.....	146
5.5	Number of Agricultural Households by whether Female Members of the Household Own or Have Customary Right to Land and District, 2002/03 Agricultural Year.....	146
<b>TOTAL ANNUAL CROP &amp; VEGETABLES PRODUCTION SHORT &amp; LONG RAINY SEASONS.....</b>		<b>148</b>
7.1 & 7.2a	Number of Crop Growing Households and Area Planted (ha) by Season and District .....	149
7.1 & 7.2b	Number of Crop Growing Households Planting Crops by Season and District .....	149
7.1 & 7.2c	Area planted (ha) and Quantity Harvested by Season and Crop for the 2002/03 agriculture year, Mara Region .....	150
7.1 & 7.2d	Number of Agriculture Households by Area Planted (ha) and crop for the Agriculture Year 2002/03 - Short and Long Rainy Seasons, Mara Region.....	151
7.1 & 7.2e	Number of Crop Growing Households and Planted Area (ha) By Means of Soil Preparation and District Wet & Dry Season, Mara .....	152
7.1 & 7.2f	Total Number of Agriculture Households and Planted Area by Fertilizer Use and District for the 2002/03 Agriculture Year - Short and Long Rainy , Mara.....	152
7.1 & 7.2g	Total Number of Agriculture Households and Planted Area by Irrigation Use and District during Short and Long Rainy Season, 2002/03 Agriculture Year .....	152
7.1 & 7.2h	Total Number of Agriculture Households and Planted Area by Insecticide Use and District for the 2002/03 Agriculture Year - Short & Long Rainy Season.. .....	153
7.1 & 7.2i	Total Number of Agriculture Households and Planted Area by Herbicide Use and District for the 2002/03 Agriculture Year - Short & Long Rainy Season.....	153
7.1 & 7.2j	Total Number of Agriculture Households and Planted Area by Fungicides Use and District for the 2002/03 Agriculture Year - Short & Long Rainy Season.....	153
7.1 & 7.2k	Total Number of Agriculture Households and Planted Area by Improved Seed Use and District for the 2002/03 Agriculture Year - Short & Long Rainy Season.....	153
<b>ANNUAL CROP &amp; VEGETABLES PRODUCTION SHORT RAINY SEASON.....</b>		<b>154</b>
7.1a	Number of Households and Planted Area by Means Used for Soil Preparation and District - SHORT RAINY SEASON, Mara Region.....	155
7.1b	Total Number of Crop Growing Households and Planted Area by Fertilizer Use and	

	District during 2002/03 Agriculture Year - SHORT RAINY SEASON, Mara Region .....	155
7.1c	Total Number of Crop Growing Households and Planted Area by Irrigation Use and District during Short Rainy Season, 2002/03 Agriculture Year, Mara Region.....	155
7.1d	Total Number of Agriculture Households and Planted Area by Insecticide Use and District for the 2002/03 Agriculture Year - Short Rainy Season. ....	156
7.1e	Total Number of Agriculture Households and Planted Area by Herbicides Use and District for the 2002/03 Agriculture Year - Short Rainy Season.. ....	156
7.1f	Total Number of Agriculture Households and Planted Area by Fungicide Use and District for the 2002/03 Agriculture Year - Short Rainy Season.. ....	156
7.1g	Number of Crop Growing Households and Planted Area By Improved Seed Use and District During 2002/03 Crop Year - Short Rainy Season .....	156
<b>ANNUAL CROP &amp; VEGETABLES PRODUCTION LONG RAINY SEASON.....</b>		<b>158</b>
7.2a	Number of Households and Planted Area by Means Used for Soil Preparation and District - LONG RAINY SEASON, Mara Region. ....	159
7.2b	Total Number of Crop Growing Households and Planted Area by Fertilizer Use and District during 2002/03 Agriculture Year - LONG RAINY SEASON, Mara Region.....	159
7.2c	Number of Agricultural Households, Area Planted (ha) and Quantity of Paddy Harvested (tons) by Season and District;2002/03 Agricultural Year.....	159
7.2d	Total Number of Agriculture Households and Planted Area by Insecticide Use and District for the 2002/03 Agriculture Year - Long Rainy Season.....	160

7.2.1	Number of Agricultural Households, Area Planted (ha) and Quantity of Maize Harvested (tons) by Season and District;2002/03 Agricultural Year.....	163
7.2.2	Number of Agricultural Households, Area Planted (ha) and Quantity of Paddy Harvested (tons) by Season and District;2002/03 Agricultural Year .....	163
7.2.3	Number of Agricultural Households, Area Planted (ha) and Quantity of Sorghum Harvested (tons) by Season and District;2002/03 Agricultural Year .....	163
7.2.4	Number of Agricultural Households, Area Planted (ha) and Quantity of Burlush Millet Harvested (tons) by Season and District;2002/03 Agricultural Year.....	163
7.2.5	Number of Agricultural Households, Area Planted (ha) and Quantity of Finger millet Harvested (tons) by Season and District;2002/03 Agricultural Year.....	164
7.2.6	Number of Agricultural Households, Area Planted (ha) and Quantity of Cassava Harvested (tons) by Season and District;2002/03 Agricultural Year .....	164
7.2.7	Number of Agricultural Households, Area Planted (ha) and Quantity of Sweet Potatoes Harvested (tons) by Season and District;2002/03 Agricultural Year.....	164
7.2.8	Number of Agricultural Households, Area Planted (ha) and Quantity of Irish Potatoes Harvested (tons) by Season and District;2002/03 Agricultural Year .....	164
7.2.9	Number of Agricultural Households, Area Planted (ha) and Quantity of Yams Harvested (tons) by Season and District;2002/03 Agricultural Year .....	165

7.2.10	Number of Agricultural Households, Area Planted (ha) and Quantity of Cocoyams Harvested (tons) by Season and District;2002/03 Agricultural Year .....	165
7.2.11	Number of Agricultural Households, Area Planted (ha) and Quantity of Mung Beans Harvested (tons) by Season and District;2002/03 Agricultural Year .....	165
7.2.12	Number of Agricultural Households, Area Planted (ha) and Quantity of Beans Harvested (tons) by Season and District;2002/03 Agricultural Year .....	165
7.2.13	Number of Agricultural Households, Area Planted (ha) and Quantity of Cowpeas Harvested (tons) by Season and District;2002/03 Agricultural Year .....	166
7.2.14	Number of Agricultural Households, Area Planted (ha) and Quantity of Chick Peas Harvested (tons) by Season and District;2002/03 Agricultural Year .....	166
7.2.15	Number of Agricultural Households, Area Planted (ha) and Quantity of Bambaranuts Harvested (tons) by Season and District;2002/03 Agricultural Year .....	166
7.2.16	Number of Agricultural Households, Area Planted (ha) and Quantity of Sunflower Harvested (tons) by Season and District;2002/03 Agricultural Year .....	166
7.2.17	Number of Agricultural Households, Area Planted (ha) and Quantity of Simsim Harvested (tons) by Season and District;2002/03 Agricultural Year .....	167
7.2.18	Number of Agricultural Households, Area Planted (ha) and Quantity of Groundnuts Harvested (tons) by Season and District;2002/03 Agricultural Year .....	167
7.2.19	Number of Agricultural Households, Area Planted (ha) and Quantity of Soya Beans Harvested (tons) by Season and District;2002/03 Agricultural Year .....	167
7.2.20	Number of Agricultural Households, Area Planted (ha) and Quantity of Bitter Aubergine Harvested (tons) by Season and District;2002/03 Agricultural Year .....	167
7.2.21	Number of Agricultural Households, Area Planted (ha) and Quantity of Garlic Harvested (tons) by Season and District;2002/03 Agricultural Year .....	168
7.2.22	Number of Agricultural Households, Area Planted (ha) and Quantity of Onions Harvested (tons) by Season and District;2002/03 Agricultural Year .....	168
7.2.23	Number of Agricultural Households, Area Planted (ha) and Quantity of Ginger Harvested (tons) by Season and District;2002/03 Agricultural Year .....	168
7.2.24	Number of Agricultural Households, Area Planted (ha) and Quantity of Cabbage Harvested (tons) by Season and District;2002/03 Agricultural Year .....	168
7.2.25	Number of Agricultural Households, Area Planted (ha) and Quantity of Tomatoes Harvested (tons) by Season and District;2002/03 Agricultural Year .....	169
7.2.26	Number of Agricultural Households, Area Planted (ha) and Quantity of Spinach Harvested (tons) by Season and District;2002/03 Agricultural Year .....	169
7.2.27	Number of Agricultural Households, Area Planted (ha) and Quantity of Amaranths Harvested (tons) by Season and District;2002/03 Agricultural Year .....	169
7.2.28	Number of Agricultural Households, Area Planted (ha) and Quantity of Pumpkins Harvested (tons) by Season and District;2002/03 Agricultural Year .....	160
7.2.29	Number of Agricultural Households, Area Planted (ha) and Quantity of Cucumber Harvested (tons) by Season and District;2002/03 Agricultural Year .....	170
7.2.30	Number of Agricultural Households, Area Planted (ha) and Quantity of Water mellon Harvested (tons) by Season and District;2002/03 Agricultural Year .....	170
7.2.31	Number of Agricultural Households, Area Planted (ha) and Quantity of Cotton Harvested (tons) by Season and District;2002/03 Agricultural Year .....	170
7.2.32	Number of Agricultural Households, Area Planted (ha) and Quantity of Tobbaco Harvested (tons) by Season and District;2002/03 Agricultural Year .....	170

<b>PERMANENT CROPS .....</b>	<b>172</b>
7.3.1 Production of Permanent Crops by Crop Type and District - Mara .....	173
7.3.2 Area Planted by Crop Type - Mara Region .....	175
7.3.3 Area Planted with Banana by District .....	175
7.3.4 Area planted with Coffee by District .....	175
7.3.5 Area planted with Orange by District .....	176
7.3.6 Area Planted with Mango by District .....	176
7.3.7 Planted Area with Fertilizer by Fertilizer Type and Crop .....	176
cont... Planted Area with Fertilizer by Fertilizer Type and Crop .....	177
<b>AGROPROCESSING .....</b>	<b>178</b>
8.1.1a Number of Crop Growing Households Reported to have Processed Products by District; 2002/03 Agriculture Year .....	179
8.1.1b Number of Crop Growing Households by Method of Processing and District; 2002/03 Agricultural Year .....	179
8.1.1c Number of Crop Growing Households Processing Crops During 2002/03 Agricultural Year by Location and Crop, Mara Region .....	179
8.1.1d Number of Crop Growing Households Reporting Processing of Farm Products Produced During 2002/03 Agricultural Year by Use of Product and Crop, Mara Region .....	180
8.1.1e Number of Crop Growing Households Reporting Processing of Farm Products Produced During 2002/03 Agricultural Year by Location of Sale of Product and Crop, Mara Region .....	180
8.1.1f Number of Crop Growing Households By Main Product and District During 2002/03 Agriculture Year, Mara Region .....	180
8.1.1g Number of Crop Growing Households By Use of Primary Processed Product and District During 2002/03 Agriculture Year, Mara Region .....	180
8.1.1h Number of Crop Growing Households By Where Product Sold and District During 2002/03 Agriculture Year, Mara Region .....	181
8.1.1i Number of Crop Growing Households By type of By-Product and District During 2002/03 Agriculture Year, Mara Region .....	181
<b>MARKETING .....</b>	<b>182</b>
10.1 Number of Crop Producing Households Reported to have Sold Agricultural Produce by District During 2002/03; Mara Region .....	183
10.2 Number of Households who Reported Main Reasons for Not Selling their Crops by District During 2002/03 Agricultural Year, Mara Region .....	183
10.3 Proportion of Households who Reported Main Reason for Not Selling Their Crops by District during 2002/03 Agricultural Year, Mara Region .....	183
<b>IRRIGATION/EROSION CONTROL .....</b>	<b>184</b>
11.1 Number and Percent of Households Reporting use of irrigation during 2002/03 Agricultural year by District .....	185
11.2 Area (ha) of Irrigatable and NON irrigated land by district during 2002/03 agriculture year .....	185
11.3 Number of Agriculture Households using irrigation by Source of Irrigation Water by districts during the 2002/03 agricultural Year .....	185
11.4 Number of Agriculture Households by Method used to obtain water and District during 2002/03 Agricultural Year .....	185
11.5 Number of Agriculture Households by Method of Field Application of Irrigation Water and District for the 2002/03 Agricultural Year .....	186

11.6	Number of Households with Erosion Control/Water Harvesting Facilities on their Land By District .....	186
11.7	Number of Erosion Control/Water Harvesting Structures By Type and District as of 2002/03 Agricultural Year.....	186
<b>ACCESS TO FARM INPUTS.....</b>		<b>188</b>
12.1.1	Number of Crop Growing Households Using Chemical Fertilizer by District, 2002/03 Agricultural Year.....	189
12.1.2	Number of Crop Growing Households Using Farm Yard Manure by District during 2002/03 Agricultural Year .....	189
12.1.3	Number of Crop Growing Households Using COMPOST Manure by District during 2002/03 Agricultural Year.....	189
12.1.4	Number of Crop Growing Households Using Insecticide/Fungicides by District during 2002/03 Agricultural Year .....	190
12.1.5	Number of Crop Growing Households Using Herbicides by District during 2002/03 Agricultural Year .....	190
12.1.6	Number of Crop Growing Households using Improved Seeds by District during 2002/03 Agricultural Year .....	190
12.1.7	Number of Agricultural Households by Source of Chemical Fertilizer and District, 2002/03 Agricultural Year.....	191
12.1.8	Number of Agricultural Households by Source of Farm Yard Manure and District, 2002/03 Agricultural Year.....	191
	cont..... Number of Agricultural Households by Source of Farm Yard Manure and District, 2002/03 Agricultural Year.....	191
12.1.9	Number of Agricultural Households and Source of COMPOST Manure by District, 2002/03 Agricultural Year .....	192
12.1.10	Number of Agricultural Households and Source of Insecticides/Fungicides by District, 2002/03 Agricultural Year .....	192
12.1.11	Number of Agricultural Households by Source of Herbicides and District, 2002/03 Agricultural Year.....	193
12.1.12	Number of Agricultural Households by Source of Improved Seeds and District, 2002/03 Agricultural Year.....	194
12.1.13	Number of Agricultural Households and Distance to Source of Chemical Fertilizer by District, 2002/03 Agricultural Year .....	194
12.1.14	Number of Agricultural Households and Distance to Source of Farm Yard Manure by District, 2002/03 Agricultural Year .....	195
12.1.15	Number of Agricultural Households and Distance to Source of COMPOST Manure by District, 2002/03 Agricultural Year .....	196
12.1.16	Number of Agricultural Households and Distance to Source of Improved Seeds by District, 2002/03 Agricultural Year .....	196
12.1.17	Number of Agricultural Households and Distance to Source of Insecticide/Fungicides by District, 2002/03 Agricultural Year .....	197
12.1.18	Number of Agricultural Households and Reason for NOT using Chemical Fertilizer by District, 2002/03 Agricultural Year .....	197
12.1.19	Number of Agricultural Households and Reason for NOT using Farm Yard Manure by District, 2002/03 Agricultural Year .....	198
12.1.20	Number of Agricultural Households and Reason for NOT using COMPOST Manure by District, 2002/03 Agricultural Year.....	198
12.1.21	Number of Agricultural Households and Reason for NOT using Insecticides/Fungicides by District, 2002/03 Agricultural Year .....	199
12.1.22	Number of Agricultural Households and Reason for NOT using Herbicides by District, 2002/03 Agricultural Year .....	199
12.1.23	Number of Agricultural Households and Reason for NOT using Improved Seeds by District, 2002/03 Agricultural Year .....	199
12.1.24	Number of Agricultural Households and Quality of Chemical Fertilizer by District, 2002/03 Agricultural Year.....	200
12.1.25	Number of Agricultural Households and Quality of Farm Yard Manure by District, 2002/03 Agricultural Year.....	200

12.1.26	Number of Agricultural Households and Quality of COMPOST Manure by District, 2002/03 Agricultural Year .....	200
12.1.27	Number of Agricultural Households and Quality of Insecticides/Fungicides by District, 2002/03 Agricultural Year .....	201
12.1.28	Number of Agricultural Households and Quality of Herbicides by District, 2002/03 Agricultural Year.....	201
12.1.29	Number of Agricultural Households and Quality of Improved Seeds by District, 2002/03 Agricultural Year.....	201
12.1.30	Number of Agricultural Households With Plan to use Chemical Fertilizer Next Year by District, 2002/03 Agricultural Year.....	201
12.1.31	Number of Agricultural Households With Plan to use Farm Yard Manure Next Year by District, 2002/03 Agricultural Year.....	202
12.1.32	Number of Agricultural Households With Plan to use COMPOST Manure Next Year by District, 2002/03 Agricultural Year.....	202
12.2.33	Number of Agricultural Households With Plan to use Insecticides/Fungicides Next Year by District, 2002/03 Agricultural Year.....	202
12.1.34	Number of Agricultural Households With Plan to use Herbicides Next Year by District, 2002/03 Agricultural Year.....	202
12.1.35	Number of Agricultural Households With Plan to use Herbicides Next Year by District, 2002/03 Agricultural Year.....	203
<b>AGRICULTURE CREDIT.....</b>		<b>204</b>
13.1a	Number of Agriculture Households receiving Credit by sex of household head and District During the 2002/03 Agriculture Year.....	205
13.1b	Number of Households Receiving Credit By Main Source of Credit and District; 2002/03 Agriculture Year.....	205
13.2a	Number of Households Reporting the Main reasons for Not Using Credit by District During the 2002/03 Agriculture Year.....	205
13.2b	Number of Credits Received by Main Purpose of Credit and District During the 2002/03 Agriculture Year .....	205
<b>TREE FARMING AND AGROFORESTRY .....</b>		<b>206</b>
14.1	Number of Planted Trees By Species and District During the 2002/03 Agriculture Year, Mara Region .....	207
	cont... ON FARM TREE PLANTING: Number of Planted Trees By Species and District During the 2002/03 Agriculture Year, Mara Region .....	207
14.2	Number of Households with planted trees on their land and Number of Trees by Planting Location and District During the 2002/03 Agriculture Year, Mara Region.....	207
14.3	Number of responses by main use of planted trees and District for the 2002/03 agriculture year, Mara Region .....	207
<b>CROP EXTENSION .....</b>		<b>208</b>
15.1	Number of Agriculture Households Receiving Extension Messages by District During the 2002/03 Agriculture Year, Mara Region.....	209
15.2	Number of Households By Quality of Extension Services and District During the 2002/03 Agricultural Year, Mara Region .....	209
15.3	Number of Agriculture Households By Source of Crop Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	209
15.4	Number of Agriculture Households Receiving Advice on Plant Spacing by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	210
15.5	Number of Agriculture Households Receiving Advice on Use of Agrochemicals by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	210
15.6	Number of Agriculture Households Receiving Advice on Erosion Control by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	210

15.7	Number of Agriculture Households Receiving Advice on Organic Fertilizer Use by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	211
15.8	Number of Agriculture Households Receiving Advice on Inorganic Fertilizer Use by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	211
15.9	EXTENSION: Number of Agriculture Households Receiving Advice on Use of Improved Seeds by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	211
15.10	Number of Agriculture Households Receiving Advice on Use of Mechanization/LST by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	212
15.11	Number of Agriculture Households Receiving Advice on Use of Irrigation Technology by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	212
15.12	Number of Agriculture Households Receiving Advice on Use of Crop Storage by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	212
15.13	Number of Agriculture Households Receiving Advice on Use of Vermin Control by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	213
15.14	Number of Agriculture Households Receiving Advice on Use of Agro-processing by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	213
15.15	Number of Agriculture Households Receiving Advice on Use of Agro-processing by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	213
15.16	Number of Agriculture Households Receiving Advice on Bee keeping by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	214
15.17	Number of Agriculture Households Receiving Advice on Use of Fish Farming by Source of Extension Messages and District During the 2002/03 Agriculture Year, Mara Region .....	214
15.18	Number of Agriculture Households Receiving and Adopting Extension Messages by Type of Message and District (Part 1) During the 2002/03 Agriculture Year, Mara Region .....	214
15.19	Number of Agriculture Households Receiving and Adopting Extension Messages by Type of Message and District (Part 2) During the 2002/03 Agriculture Year, Mara Region .....	215
15.20	Number of Agriculture Households Receiving and Adopting Extension Messages by Type of Message and District (Part 3) During the 2002/03 Agriculture Year, Mara Region .....	215
15.21	Number of Agriculture Households Receiving and Adopting Extension Messages by Type of Message and District (Part 4) During the 2002/03 Agriculture Year, Mara Region .....	215
15.22	Number of Agriculture Households Receiving and Adopting Extension Messages by Type of Message and District (Part 5) During the 2002/03 Agriculture Year, Mara Region .....	216
<b>ANIMAL CONTRIBUTION TO CROP PRODUCTION .....</b>		<b>218</b>
17.1	Number of agriculture households using draft animal to cultivate land by District during 2002/03 agriculture year, Mara Region .....	219
17.2	Type of Draft By Number Owned, Used and Area Cultivated (Hectares) By District during 2002/03 agriculture year, Mara Region .....	219
17.3	Number of Crop Growing households using organic fertilizer by District during 2002/03 agriculture year, Mara .....	219
17.4	Area of farm yard manure and Compost Application by District during 2002/03 agriculture year, Mara Region .....	220
<b>CATTLE PRODUCTION .....</b>		<b>222</b>
18.1	Total Number Households rearing Cattle by District during 2002/03 agriculture year, Mara Region .....	223
18.2	Number of Cattle By Type and District as of 1st October, 2003 .....	223
18.3	Number of Households Rearing Cattle, Head of Cattle and Average Head per Household by Herd Size as of 1st October, 2003 .....	223
18.4	Number of Cattle by Category and Type of Cattle; on 1st October 2003 .....	224

18.5	Number of Indigenous Cattle By Category and District as on 1st October, 2003 .....	224
18.6	Number of Improved Beef Cattle By Category and District as on 1st October, 2003 .....	224
18.7	Number of Improved Dairy Cattle By Category and District as on 1st October, 2003 .....	225
18.8	Number of Cattle By Category and District as on 1st October, 2003 .....	225
<b>GOATS PRODUCTION .....</b>		<b>226</b>
19.1	Total Number of Goats by Type and District as on 1st October, 2003 .....	227
19.2	Number of Households Rearing Goats by Herd Size on 1st October, 2003 .....	227
19.3	Total Number of Goats by Category and Type of Goat as of 1st October, 2003 and District.....	228
19.4	Total Number of Indigenous Goat by Category and District as on 1st October, 2003 .....	228
19.5	Number of Improved Goat for Meat by Category and District as on 1st October, 2003.....	228
19.6	Number of Improved Dairy Goat by Category and District on 1st October, 2003 .....	229
19.7	Total Number of Goats by Category and District on 1st October, 2003 .....	229
<b>SHEEP PRODUCTION.....</b>		<b>230</b>
20.1	Total Number of Sheep By Breed and on 1st October 2003 .....	231
20.2	Number of Households Raising or Managing Sheep by District on 1st October, 2003 .....	231
20.3	Number of Sheep by Type of Sheep and District as 1st October, 2002/03.....	231
20.4	Number of Households and Heads of Sheep by Herd Size on 1st October 2003 .....	231
20.5	Average Number of Sheep by Type of Sheep and District on 1st October 2003, Mara Region .....	232
20.6	Total Number of Indigenous Sheep by Sheep Type and District on 1st October 2003 .....	232
20.7	Total Number of Improved Mutton Sheep by Type and District on 1st October 2003 .....	232
20.8	Total Number of Sheep by sheepType and District on 1st October 2003.....	232
<b>PIGS PRODUCTION.....</b>		<b>234</b>
21.1	Number of Households and Pigs by Herd Size on 1st October 2003.....	235
21.2	Number of Households and Pigs by District on 1st October 2003.....	235
21.3	Number of Pigs by Type and District on 1st October, 2003 .....	235
<b>LIVESTOCK PESTS AND PARASITE CONTROL .....</b>		<b>236</b>
22.1	Number of Livestock Rearing households deworming Livestock by District during 2002/03 Agricultural Year.....	237
22.2	Number of Livestock Rearing Households that dewormed Livestock by type of Livestock and District during the 2002/03 Agricultural Year.....	237
22.3	Number and Percent of agricultural households reporting to have encountered tick problems during 2002/03 Agriculture Year by District. ....	237
22.4	Number of Livestock Rearing Households by Methods of Ticks Control Use and District During the 2002/03 Agricultural Year.....	237
22.5	Number and Percent of agricultural households reporting to have encountered Tsetse Flies problems during 2002/03 Agriculture Year by District.....	238
22.6	Number of Livestock Rearing Households by Methods of Tsetse flies Control Use and District During the 2002/03 Agricultural Year .....	238

<b>OTHER LIVESTOCK .....</b>	<b>240</b>
23a Total Number of Other Livestock by Type on 1st October 2003.....	241
23b Number of Chicken by Category of Chicken and District on 1st October 2003.....	241
23c Head Number of Other Livestock by Type of Livestock and District .....	241
23d Total Number of Households and Chicken Raised by Flock Size as of 1st October 2003.....	241
23e Livestock/Poultry Population Trend .....	241
<b>FISH FARMING.....</b>	<b>242</b>
28.1 Number of Agricultural Households involved in Fish Farming and District, 2002/03 Agricultural Year.....	243
28.2 Number of Agricultural Households By System of Farming and District during the 2002/03 Agricultural Year.....	243
28.3 Number of Agricultural Households By Source of Fingerlings and District during the 2002/03 Agricultural Year .....	243
28.4 Number of Agricultural Households By Location of Selling Fish and District during the 2002/03 Agricultural Year.....	243
28.5 Total Number of Fish Harvested by Type and District, 2002/03 Agricultural Year .....	243
<b>LIVESTOCK EXTENSION.....</b>	<b>244</b>
29.1a Number of Agricultural Households Receiving Extension by District During the 2002/03 Agricultural Year.....	245
29.1b Number of Agricultural Households By Source of Extension Services and District during the 2002/03 Agricultural Year .....	245
29.2 Number of Agricultural Households Receiving Extension Advice on Feeds and Proper Feeding By Source and District, 2002/03 Agricultural Year .....	246
29.3 Number of Agricultural Households Receiving Extension Advice on Housing By Source and District, 2002/03 Agricultural Year.....	246
29.4 Number of Agricultural Households Receiving Extension Advice on Proper Milking By Source and District, 2002/03 Agricultural Year.....	246
29.5 Number of Agricultural Households Receiving Extension Advice on Milk Hygiene By Source and District, 2002/03 Agricultural Year.....	246
29.6 Number of Agricultural Households Receiving Extension Advice on Disease Control By Source and District, 2002/03 Agricultural Year.....	247
29.7 Number of Agricultural Households Receiving Extension Advice on Herd /Flock Size and Selection By Source and District, 2002/03 Agricultural Year.....	247
29.8 Number of Agricultural Households Receiving Extension Advice on Pasture Establishment and Selection By Source and District, 2002/03 Agricultural Year.....	248
29.9 Number of Agricultural Households Receiving Extension Advice on Group Formation and Strengthening By Source and District, 2002/03 Agricultural Year.....	248
29.10 Number of Agricultural Households Receiving Extension Advice on Calf Rearing By Source and District, 2002/03 Agricultural Year.....	249
29.11 Number of Agricultural Households Receiving Extension Advice on Use of Improved Bulls By Source and District, 2002/03 Agricultural Year .....	249
29.12 Number of Agricultural Households By Quality of Extension Services and District, 2002/03 Agricultural Year.....	250
<b>ACCESS TO INFRASTRUCTURE AND OTHER SERVICES .....</b>	<b>252</b>
33.01a Mean Distances from Household Dwellings to Infrastructures and Services by Districts.....	253
33.01b Number of Households By Distance to Secondary School by District for 2002/03 agriculture year .....	254

33.01c	Number of Households By Distance to All Weather Road by District for 2002/03 agriculture year .....	254
33.01d	Number of Households by Distance to Feeder Road by District for 2002/03 agriculture year .....	254
33.01e	Number of Households By Distance to Hospital by District for 2002/03 agriculture year .....	255
33.01f	Number of Households by Distance to Health Clinic by District for 2002/03 agricultural year.....	255
33.01g	Number of Households by distance to Primary School for 2002/03 agriculture year .....	255
33.01h	Number of Households by Distance to Regional Capital by District for 2002/03 agriculture year .....	256
33.01i	Number of Households by Distance to District Capital by District for 2002/03 agriculture year.....	256
33.01j	Number of Households by Distance to Tarmac Road by District for 2002/03 agricultural year .....	256
33.01k	Number of Households by Distance to Primary Market by District for 2002/03 agricultural year.....	257
33.01l	Number of Households by Distance to Tertiary Market by District for 2002/03 agricultural year.....	257
33.01m	Number of Households by Distance to Secondary Market by District for 2002/03 agricultural year.....	257
<b>TYPE OF SERVICE .....</b>		<b>258</b>
33.19a	Number of Agricultural Households by Satisfaction of Using Veterinary Clinic and District, 2002/03 Agricultural Year.....	258
33.19b	Number of Agricultural Households by Satisfaction of Extension Centre and District, 2002/03 Agricultural Year .....	258
33.19c	Number of Agricultural Households by Satisfaction of Using Veterinary Clinic and District, 2002/03 Agricultural Year.....	258
33.19d	Number of Agricultural Households by Satisfaction of Using Plant Protection Lab. and District, 2002/03 Agricultural Year.....	259
33.19e	Number of Agricultural Households by Satisfaction of Using Land Registration Office and District, 2002/03 Agricultural Year.....	259
33.19f	Number of Agricultural Households by Satisfaction of Using Livestock development Centre and District, 2002/03 Agricultural Year.....	259
<b>HOUSEHOLD FACILITIES .....</b>		<b>260</b>
34.1	Number of Agriculture Households by Type of Toilet and District During the 2002/03 Agriculture Year .....	261
34.2	Number of households reporting average number of rooms and type of Roofing Materials by District, 2002/03 Agricultural Year.....	261
34.3	Number of Agricultural Households by Type of Owned Assets and District during 2002/03 Agricultural Year .....	261
34.4	Number of Agricultural Households by Main Source of Energy Used for Lighting during 2002/03 Agricultural Year.....	262
34.5	Number of Agricultural Households by Main Source of Energy Used for Cooking during 2002/03 Agricultural Year.....	262
34.6	Number of Agricultural Households by Main Source of Drinking Water by Season (wet and dry) and District during 2002/03 Agricultural Year .....	263
34.7	Proportion of Agricultural Households by Main Source of Drinking Water by Season (wet and dry) and District during 2002/03 Agricultural Year .....	263
34.8	Number of Households Reporting Time Spent to and from Main Source of Drinking Water by Season (Wet and Dry) by District for 2002/03 agriculture year .....	264
34.9	Proportion of Households Reporting Time Spent to and from Main Source of Drinking Water by Season (Wet and Dry) by District for 2002/03 agriculture year .....	264
34.10	Number of Agricultural Households by Number of Meals the Household Normally Took per Day by District .....	265

34.11	Number of Households by Number of Days the Household Consumed Meat during the Preceding Week by District .....	265
34.12	Number of Households by Number of Days the Household Consumed Fish during the Preceding Week by District .....	266
34.13	Number of Households Reporting the Status of Food Satisfaction of the Household during the Preceding Year by District .....	266
34.14	Number of Households by Type of Roofing Materials and District during the 2002/03 Agricultural Year.....	267
34.15	Number of Households by Main Source of Cash Income and District during 2002/03 Agriculture Year.....	267

**APPENDIX II: CROP TABLES**

Type of Agriculture Household.....	128
Number of Agriculture Households .....	130
Rank of Importance of Livelihood Activities .....	132
Households Demography .....	136
Land Access/Ownership .....	142
Land Use .....	144
Total Annual Crop and Vegetable Production – LONG and SHORT Rainy Seasons.....	148
Annual Crop and Vegetable Production – SHORT Rainy Season.....	154
Annual Crop and Vegetable Production LONG Rainy Seasons.....	158
Permanent Crop Production.....	172
Agro-processing .....	178
Marketing .....	182
Irrigation/Erosion Control .....	184
Access to Farm Inputs .....	188
Agriculture Credit .....	204
Tree Farming and Agro-forestry .....	206
Crop Extension .....	208
Animal Contribution to Crop Production.....	218
Cattle Production .....	222
Goat Production .....	226
Sheep Production .....	230
Pig Production .....	234
Livestock Pests and Parasite Control .....	236
Other Livestock .....	240
Fishing Farming .....	242
Livestock Extension .....	244
Access to Infrastructure and other services.....	252
Household Facilities .....	280

## **TYPE OF AGRICULTURE HOUSEHOLD**

<b>2.1 TYPE OF AGRICULTURE HOUSEHOLD: Number of Agricultural Households by type of household and District during 2002/03 Agriculture Year</b>									
District	Agriculture, Non Agriculture and Urban Households								
	Rural households involved in Agriculture	% of Total rural households	Rural households NOT involved in Agriculture	% of Total Rural households	Total Rural Households	% of Total households	Urban Households	% of Total households	Total Number of Households (from 2002 Pop. Census)

**Definition and working page for page 1****General Definitions****Small holder hh/small scale farm:**

Should have between 25sq metres and 20 Hectares under production, and/or between 1 and 50 head of Cattle, and/or between 5 and 100 head of Sheep/Goats/Pigs, and/or between 50 and 1000 chickens/turkeys/ducks/rabbits.

**Household:** A group of people who occupy the whole or part of one or more housing units and makes joint provisions for food and/or other essentials for living.

**Household Head:** A person who is acknowledged by all other members of the household either by virtue of his age or standing in the household as the head. He/she should be a permanent resident of the house and he/she is the main person responsible for making decisions.

**Agricultural Holding:** This is an economic unit of agricultural production under single management. It consists of all livestock kept and all land used for agricultural production without regard to title. For the purpose of this survey, the agricultural holdings are restricted to those which meet one of the following conditions:

- Having or operated at least 25 sq meter of arable land
- Own or keep at least one head of cattle or five goats/sheep/pigs or fifty chicken/ducks/turkeys during the agricultural year 2002/03 (October 2002 to September 2003) .

**Question Specific Definitions:****Type of Agriculture Holdings Codes (Q2.1):**

- **Crops only:** A holding is referred to be a crops only holding if it has cultivated a piece of land equal or exceeding 25 sq Meter. This also applies to all households owning or have kept livestock whose number does not qualify such household to be an agricultural holding (No cattle, less than 5 goats/sheep/pigs, less than 50 chickens/turkeys/ducks/rabbits)

- **Livestock only:** A holding is referred to be a Livestock only holding if it has exercised Livestock husbandry only during the agricultural year. The livestock can be herded in search for areas of pasture, but the core household unit always remains in the same place and the herder is rarely away from this place for long periods at a time.

- **Livestock pastoralism:** This refers to a household which practices livestock production as its major income generating activity and a means of subsistence, but moves from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they have no permanent place of residence.

*For both livestock only and pastoralism , the number of livestock has to be at least 1 head of cattle, 5 goats/sheep/pigs or 50 chickens/turkeys/ ducks/rabbits. This also applies to all households owning or have cultivated a piece of land less than 25 sq meter, which does not qualify such household be an agricultural holding.*

- **Both crops and livestock:** A holding is referred to be a both crops and livestock if it has cultivated a piece of land equal or exceeding 25 sq meter and if such households is owning or have kept livestock whose number qualify such household be an agricultural holding.

**Important livelihood activities/source of income (Q 2.2):**

- **Crop farming:** This refers to a household where crop production is its major means of subsistence and income generation.

- **Livestock farming/herding/pastoralism:** This refers to a household where livestock farming/herding is its major means of subsistence & income generation.

- **Off Farm Income** This refers to cash generated from activities other than from the households holding. This can be from permanent employment (eg government/other), temporary employment/labouring and includes cash generated from working on other farmers farms.

-**Remittances:** Assistance from family members who are not currently part of the household, or from a relative or family friend. This assistance is usually in the form of cash but it can also be in-kind (eg food, clothes, building material, farm tools, etc). The money is a gift and is not paid back.

-**Fishing/hunting and gathering** The use of non farmed resources for food eg fishing, hunting wildlife and gathering mushrooms, berries, wild honey roots from uncultivated land.

**Procedures for Questions:****Q 2.1 Type of agriculture household/holding**

1. Using the options under the question classify the type of agriculture hh/holding

**Note:** If the hh had 1 acre of crops and raised 40 chickens during 2002/03 it is classified as '**Crops only**' as the number of chickens do not qualify the hh as keeping livestock.

**Q 2.2 Important hh livelihood activities /source of income**

1. Read the list in column 1 to the respondent and ask him to rank them in order of importance during the reference year.

2. In column 2 Indicate the importance of each activity by placing '1' against the most important, '2' against the second most important, etc until you reach '7' the least important activity/source of income.

**Note: You must attempt to fill in all boxes. Most households will carry out these activities to a greater or lesser degree. You will normally have to probe to get remittances.**

**If the hh did not undertake an activity during the 2002/2003 agriculture year then mark the appropriate box in column 2 with an 'X'.**

3. For each activity/source of income assign a percentage. The enumerator should assist the respondent in assigning the percentage based on the information provided by the farmer.

4. After completing column 3 make sure the percentages add up to 100.

**Note:** It is not essential to be 100% accurate. This question is just to give the relative importance of the different items in general terms

**3.0 HOUSEHOLD INFORMATION**

3.1 Give details of personal **particulars** of all household members beginning with the head of the household

Not applicable for children under 5 years of age

**Definition and working page for page 2****Question Specific Definitions:****Relation to head (Col 2):**

- **Household Head:** A person who is acknowledged by all other members of the household either by virtue of their age or standing as the household head.

**Read and Write (Col 7):**

- **Any other language:** Must be a written language.

For someone who can read and write in Swahili and any other language apart from English, the correct code is 1. For one who can read and write in English and any other language apart from Swahili the correct code is 2. Code 4 should only be used for another language but not English or Swahili

**Education Level Reached (Col 9):**

Indicate the highest level only. For those still attending school fill in the last year reached before the survey period. For example if a hh member is currently in standard 7 this year his highest grade reached is standard 6

**Main Activity (Col 11):**

- **Crop farming:** The persons main activity is crop production. This can be annual crops, vegetables, permanent crops or tree farming.

- **Livestock farming/herding:** The persons main activity is livestock farming/herding. The livestock can be herded in search for areas of pasture, but the core household unit always remains in the same place and the herder is rarely away from this place for long periods at a time. This category also includes fish farming but not fishing.

- **Livestock pastoralism:** The persons main activity is in moving livestock from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they may have no permanent place of residence.

- **Paid employment** - In full time employment earning a cash income

- Government/Parastatal - In full time employment for a government Ministry, Department or Board that is controlled by the Government  
- Private/NGO/Mission/etc - employed by Non public/government organisation

- **Self employee** - works for own business for cash income

- With employees - Works for own business for cash and employs other workers

- Without employees - Works for own business for cash but does not employ other workers

- **Not working but available to work** - No productive activity but would like to have one.

- **Not working & nor available for work** - No productive activity and does not want to have one.

- **Unable to work** too old, too young, retired, disabled, etc

**Off-farm Income (Col 12)** - Income made from activities NOT on the HH's farming activities. This can be any off farm income generation activity and includes working for cash on other peoples farms.

Indicate whether each member was involved in an off farm income generating activity during 2002/03

**Overview to section 3.0****Section 3.0 - Preliminary note**

1. Make sure that you define the hh properly to ensure that all the members of the hh are included. Make sure you stress that the hh is not just the hh heads direct family and that it includes other people living and eating together with the family.

2. If you notice that his house is large or you see many people around his house and he has only given you small number of hh members enquire further until you are sure that you have captured all the hh members.

**Procedures for questions****Section 3.0 - Household Information**

1. For each household member complete columns 1, 2 & 3.

2. After completing columns 1, 2 & 3 for each household member go back to the first household member and complete the remaining columns for that member.

3. Repeat step 2 for the rest of the household members

**IMPORTANT NOTE:**

Cross check responses in columns 11 and 12 with section 2 especially in relation to:

off-farm income - if a hh member was involved in off farm income then there should be a response in question 2.2.4 and vice versa.

4.0 LAND ACCESS/OWNERSHIP/TENURE			
4.1 Details of area "owned" by the household in the 2002/03 agricultural year. Give area reported by the respondent in "acres".		<b>Area in Acres</b>	
4.1.1	Area <b>Leased/Certificate of ownership</b>	<input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	4.2 Was all land available to the hh used during 2002/03 (Yes=1, No=2) <input type="checkbox"/>
4.1.2	Area owned under <b>Customary Law</b>	<input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	
4.1.3	Area <b>Bought</b> from others	<input type="text"/> <input type="text"/> <input type="text"/> . <input type="text"/> <input type="text"/>	4.3 Do you consider that you have sufficient land for the hh (Yes=1, No=2) <input type="checkbox"/>

6.2.9	<b>Fishing</b> (Fish)	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>	

## Definition and working page for page 3

### Question Specific Definitions

#### Section 4.1 - Land Access/Ownership

**Lease/Certificate of Ownership** Area under lease/certificate of ownership refers to the area for which the household possesses a government issued leasehold title or certificate of ownership. The land will normally be officially surveyed and boundaries marked. This includes leased land bought from others where the lease/certificate of ownership has been transferred.

**Customary Law:** This refers to the land which the hh does not have an official government title to but its right of use is granted by the traditional leaders. This user-right agreement does not have to be granted directly by the village leaders as right of access may be passed on through heredity.

**Bought:** This refers to the area of customary land that has been bought from others. This land does not have an official title and therefore is not leasehold.

**Rented from others:** Land rented from others for Cash or for a fixed amount in crop produce (eg fixed number of bags at harvest).

**Borrowed:** Use granted by land owner free of charge. Land owner can either be a lease holder or has right of access through customary law.

**Share Cropping:** where the hh is permitted to use land which is then paid for from a percentage of the harvested crop.

#### Section 5.0 Land Use

- **Temporary crops:** are sown and harvested during the same agricultural year

- **Permanent crops:** are sown or planted once and then , they occupy the land for some years and need not to be replanted after each annual harvest. Permanent crops are mainly trees (e.g., apples) but also bushes and shrubs (e.g., berries), palms (e.g., dates), vines (e.g., grapes), herbaceous stems (e.g., bananas) and stemless plants (e.g., pineapples).

- **Mixed Crops:** This is a mixture of two or more crops planted together and mixed in the same plot/field. The two crops can either be randomly planted together or they can be planted in a particular pattern eg intercropping (1 row of maize and 1 row of beans). A field that has been divided into plots for different crops is not mixed. This is further subdivided into:

**Permanent Mixed** -two or more permanent crops grown together,  
**Permanent/Temporary Mix** - permanent crop and annual crop together,  
**Temporary Mixed** - two or more temporary, annual crops grown together.

- **Pasture Land:** This is an area of owned/allocated land which is set aside for livestock grazing. It can be improved pasture where the farmer has planted grass, applied fertilized or applied other production increasing technologies to improve the grazing. Or it can be rough pasture.

- **Fallow:** This is the area of land that is normally used for crop production, but is not used for crop production during a year or a number of years. This is normally to allow for self generation of fertility/soil structure and is often an integral part of the crop rotation system.

- **Natural Bush:** Land which is considered productive but is not under cultivation or used extensively for livestock production and has naturally growing shrubs and trees.

- **Planted trees:** Land which is used for planting trees for poles or timber

- **Unusable:** Land that is known to be non-productive for agriculture purposes

**Uncultivated Usable:** This is land that was not used for reasons other than fallow. The reasons could be lack of inputs/money/rainfall/etc

#### Distance to fields (Q6.1):

-**fields** A field is a contiguous piece of land holding which the farmer considers as a single entity. The field may be divided into plots for growing different crops. A holding may consist of one or more fields in different localities.

#### Use of Communal Resources (Q6.2):

-**Communal resources** - refers to the place on which all individual households can have access to. It is not individually owned or controlled by one hh.

**NOTE:** The listed resources refers to communal resources and not those individually owned or part shared. The resource has to be freely accessible to the whole village

### Overview to section 4

#### Section 4.0 - Preliminary note Land Access/ Ownership

Access/Ownership refers to the area utilized by the members of the household. This does not include communal land where the resources are shared between households. It does include official communal land that the hh has sole access to eg a plot for crop farming in the communal area.

### Procedures for Questions

#### Section 4.0 - Land Ownership

1. Ask the respondent if he knows the total area of land the household has sole access to. If he knows make a note in the calculation space
2. Ask the respondent the area of the different land ownership categories the household has sole access to (Q4.1.1 to 4.1.7) and record in the appropriate spaces.
3. Add up the area of the different categories of land and compare it with the total area obtained in step 1 (if the respondent provided the information).
4. If the total area is different find out which one is correct and make amendments where appropriate.

#### Section 5.0 - Land Use

1. Ask the respondent the area of the different landuse categories the household has sole access to (Q5.1.1 to 5.1.12) and record in the appropriate spaces.
2. Add up the area of the different categories of land and compare it with the total area obtained in section 4.0. The total area should be the same.
3. If the total area is different find out which one is correct and make amendments where appropriate.

#### Section 6.2 Communal resources

**Note:** the code "Not available" means that the resource does not exist. The code "Not Used" means that the resource does exist but is not used by the hh.

**Definitions and working page for page 4**

*Working table for the calculation of area occupied by annual crop in a mixture*

Crop mixture 1	Crop Name	Total area of mix (acre)	Ground area/plant (ACRE)	Total no. of plants	Total ground area of plants (ACRES)
(a)	(b)	(c)	(d)	(e)	(f)
Permanent crop 1			0.00		0 .
Permanent crop 2			0.00		0 .
Permanent crop 3			0.00		0 .
Permanent crop 4			0.00		0 .
Total Area of permanent crops in mix					0 .
<b>REMAINING AREA UNDER TEMPORARY CROPS</b>					
				crop%	crop area
Temporary/permanent crop name 1					
Temporary/permanent crop name 2					
Temporary/permanent crop name 3					
<b>Total area check</b>			<b>Crop total check</b>		

Crop mixture 2	Crop Name	Total area of mix (acre)	Ground area/plant (ACRE)	Total no. of plants	Total ground area of plants (ACRES)
(a)	(b)	(c)	(d)	(e)	(f)
Permanent crop 1			0.00		0 .
Permanent crop 2			0.00		0 .
Permanent crop 3			0.00		0 .
Permanent crop 4			0.00		0 .
Total Area of permanent crops in mix					0 .
<b>REMAINING AREA UNDER TEMPORARY CROPS</b>					
				crop%	crop area
Temporary/permanent crop name 1					
Temporary/permanent crop name 2					
Temporary/permanent crop name 3					
<b>Total area check</b>			<b>Crop total check</b>		

**Land Clearing:** Refers to removing trees/bush/grass prior to ploughing  
**Soil Preparation:** Refers to the seedbed preparation (ploughing, harrowing, etc)  
**Planned Area:** Area in **Acres** the household planned to plant before the season started  
**Actual Planted Area:** The area in **Acres** the household was able to plant.  
**Area Harvested:** The area in **Acres** that produced a harvest. This is the same as the area planted minus the area that was destroyed by major flood/pest/ animal/etc damage.

**Temporary/Annual Crop:**  
 Crops which are planted and harvested within a period of 12 months after which time the plants die. Most annual crops are planted and harvested on a seasonal basis.

**Crop Codes (Cereals /tubers/roots):**

Code	Crop
11	Maize
12	Paddy
13	Sorghum
14	Bulrush Millet
15	Finger Millet
16	Wheat
17	Barley
22	Sweet Potatos
23	Irish potatoes
50	Cotton
51	Tobacco
53	Pyrethrum
62	Jute
19	Seaweed

**Vegetable Codes:**

Co	Crop
-de	
86	Cabbage
87	Tomatoes
88	Spinach
89	Carrot
90	Chillies
91	Amaranths
92	Pumpkins
93	Cucumber
94	Egg Plant
95	Water Mellon
96	Cauliflower

**Crop Codes Legumes Oil & fruit:**

Code	Crop
31	Beans
32	Cowpeas
33	Green gram
35	Chick peas
36	Bambara nuts
37	Field peas
41	Sunflower
42	Simsim
43	Groundnut
47	Soyabeans
48	Caster seed

**Cash Crop Codes:**

Code	Crop
50	Cotton
51	Tobacco
53	Pyrethrum
62	Jute
19	Seaweed

**Instructions for calculating the area of mixed crops in a mixture.**

- If the mixed crop is mixed annual only enter the total area of the field in the REMAINING AREA UNDER TEMPORARY CROPS. and goto step 1 of these instructions.
- If the mixed crop is mixed permanent and annual try to get the % occupied by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annual crops in the mix, Step C
- Number of trees method to calculate annual crop areas in a peranent-annual crop mix/
  - list each of the permanent crops in column b and enter the ground area per acre for each permanent crop (from instructions for page 6) in column 'd'.
  - obtain the number of permanent trees in the mix from the respondent and enter the number in column 'e'.
  - calculate the area occupied by each crop by multiplying column 'd' with column 'e' and sum these to obtain the total area of permanent crops in the mix.
  - subtract the total area of permanent crops in the mix from the total area of mix and enter the result in the total area under temporary crops.
  - proceed to step 1 to calculate the area under each temporary crop.

- Enter the name of each annual crop in the mix & estimate the percentage of each crop.
- Using the percentages for each crop calculate the area of each crop from the REMAINING AREA UNDER TEMPORARY CROPS.
- After completing this exercise for all fields, sum the area of each crop in the mix plus any monocrops and enter totals in section 7.1 col 6.
- Obtain an estimate of the planned area for each crop and enter it in column 5
- If the area harvested is different to the area planted estimate the harvest area
- Once the quantity harvested is obtained calculate the Yield (Metric tonnes/acre) & compare the figure with the norms given in the crop codes box. If it is excessively different check the area and the amount harvested.

**7.2 ANNUAL CROP AND VEGETABLE PRODUCTION - LONG RAINY SEASON**

7.2.1 Did the hh plant any crops during the **LONG RAINY** season? (Yes=1 No=2)

If the response is 'NO' give main reason  Then go to section 7.3

**Main Reason (Above)** No rains....1 Rains came too late ....2 Does not plant annual crops .....3  
No money 4 Illness/social problems ..5

7.2.2 For each crop planted during 2002/03 **Long Rainy** season provide the following information

Crop Name	Crop Code	Land Clearing	Soil preparation	Planting		Inputs						Harvesting & Storage				Marketing			
				Planned area (acres)	Actual Planted area (acres)	% improved seed	Irrigation use	Fertiliser use	Herbicide use	Fungicide use	Pesticide use	How harvested	How threshed	Area Harvested (acres)	main product code	Quantity harvested (Kgs)	Quantity Stored (Kgs)	Quantity sold (kgs)	mostly sold to

## Definitions and working page for page 6

### Permanent Crop:

Permanent crops: are sown or planted once and then , they occupy the land for some years and need not to be replanted after each annual harvest. Permanent crops are mainly trees (e.g., apples) but also bushes and shrubs (e.g., berries), palms (e.g., dates), vines (e.g., grapes), herbaceous stems (e.g., bananas) and stemless plants (e.g., pineapples).

### Total number of plants:

This includes both mature harvestable plants and immature non harvestable plants.

**Number of mature plants:** This is the number of plants which bared harvest.

### Instructions for Permanent crop mono stands and mixtures

- A.** For fields that are **monocrop permanent**, **ONLY** enter the **area of plants in column 3**.
- B.** For fields that are **mixed permanent** calculate the area of each crop based on the % **occupied by each crop method** (NOT using the number of trees method) and **ONLY** enter the area in **column 4**
- C.** For fields that are **mixed permanent/annual** either:
- **ONLY** enter the **area in column 4** if the area of the permanent crop was based on the % **occupied by each crop method**
- OR**
- **ONLY** enter the **number of trees in column 5** if the number of permanent crop plants was provided

### Permanent crops (oils):

Code	Crop	Ground area/plant
44	Palm Oil	0.00049
45	Coconut	0.00037
46	Cashewnut	0.00062

54	Coffee	stems	beans	husks	
55	Tea	stems			
56	Cocoa	stems	cocoa	cocoa butter	
57	Rubber	stems			
58	Wattle	stems			
59	Kapok	stems			
60	Sugar Cane		sugar/juice	molasses	ethanol
61	Cardamom				
71	Banana	leaves/stems	juice		
72	Avocado	stems			
73	Mango	stems	Juice		
74	Paw paw		Juice		
76	Orange	stems	Juice		
77	Grape fruit	stems	Juice		
78	Grapes	stems	Juice		
79	Mandarin	stems	Juice		
80	Guava	stems			
81	Plums	stems			
82	Apples	stems			
83	Pears	stems			
84	Pitches	stems			
85	Lime/Lemon	stems	juice		

### General Definition for Section 7.4

**Secondary Products:** Second most important product from a crop. Eg a household may consider the grain from maize as the primary product and the stems/straw as the secondary product.

**Note: Secondary products are NOT the same as bi-products. By-products are the result of a processing activity and are dealt with in section 8.0.**

### Procedures for Questions

#### Q 7.6 Details of Secondary Products:

- From the list of crops in Q 7.1.2, 7.2.2 & 7.3.2, ask the respondent if the hh used any secondary products. List the crop names and codes in column 1 and 2 for those crops that the hh used secondary products.
- For the listed crops give details of the secondary products used.
- If no units were sold, enter "0" in columns 8 & 9.

#### Q 8.0 Agroprocessing & bi-products:

- From the list of crops in Q 7.1.2, 7.2.2 & 7.3.2, ask the respondent if the hh processed any of these crops during the 2002/03 agriculture year. List the crop names and codes in column 1 and 2 for those crops that were processed by the hh.
- For the listed crops give details of the secondary crops used.
- If no main product or bi-product was sold enter "0" in columns 8 & 14.
- If no bi-product was produced enter "0" in columns 10, 11, 12, 13 & 14.

### Question Specific Definitions

**Agroprocessing and bi-products (Q 8.2)**  
(Note: Agroprocessing refers to the processing of crops for hh utilisation and for sale)

#### Main Product (Col 5):

Main Product after processing. Eg for Paddy it may be the polished grain. For Maize it may be flour.

**Bi-Product code (Col 11):** is the secondary residue after processing, eg for rice it may be the husk. for maize it may be the bran.

#### Mainly used for (Col 5 & 11):

- Consumed by household can mean eaten or utilised in another way (eg by animals) by the hh.

<b>9.0 CROP STORAGE</b>							
9.1	Did the household <b>store</b> any crops during the 2002/03 agriculture year? (Yes =1, No=2) <input style="float:right;" type="checkbox"/>						
<i>If the response is 'NO' go to section 10.0</i>							
9.2 For <b>each</b> of the listed crops provide the following details on <b>storage</b>							
S/N	Crop Name	Stor- ed Y=1 No=2	Current Quantity Stored (kg)	Method of Storage	Normal duration of storage	Main pur- pose	Estimate
							Storage loss
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
9.2.1	Maize	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.2	Paddy	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.3	Sorghum/Millet	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.4	Beans, peas, etc	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.5	Wheat	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.6	Coffee	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.7	Cashewnut	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.8	Tobacco	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.9	Cotton	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.10	Groundnuts/bambara	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Main method of Storage (Col 4)**

In locally made traditional structure..1  
 In Improved locally made structure .2  
 In modern store .....3  
 In Sacks/open drum.....4  
 In airtight drum .....5  
 Unprotected pile .....6  
 Other .....8

**Duration of Storage (Col 5)**

Less than 3 months .....1  
 Between 3 and 6 months .....2  
 Over 6 months .....3

**Main purpose of storage (Col 6)**

Food for the household .....1  
 To sell for higher price .....2  
 seed for planting.....3  
 Other .....8

**Storage loss (Col 67)**

Little or no loss .....1  
 Up to 1/4 loss .....2  
 Between 1/4and 1/2 loss ..3  
 Over 1/2 loss .....4

<b>10.0 MARKETING</b>							
10.1	Did the household <b>sell any crops</b> from the 2002/03 agriculture year? (Yes=1, No=2) <input style="float:right;" type="checkbox"/>						
<i>(If the response is 'YES' or 'NO' go to section 10.2)</i>							
10.2 For <b>each of the following crops</b> what was the main <b>marketing problem</b> faced by the household during 02/03							
	Crop	Main problem		Crop	Main problem	10.3 From the list of marketing problems below, for all produce rank the five most important problems	
	(1)	(2)		(1)	(2)		
10.2.1	Maize	<input type="checkbox"/>	→	10.2.9	Vegetables	<input type="checkbox"/>	
10.2.2	Rice	<input type="checkbox"/>		10.2.10	Tree Fruits	<input type="checkbox"/>	
10.2.3	Sorghum/millet	<input type="checkbox"/>		10.2.11	Cashewnut	<input type="checkbox"/>	10.3.1
10.2.4	Wheat	<input type="checkbox"/>		10.2.12	Cotton	<input type="checkbox"/>	10.3.2
10.2.5	Beans, peas etc	<input type="checkbox"/>		10.2.13	Tobacco	<input type="checkbox"/>	10.3.3
10.2.6	Cassava	<input type="checkbox"/>		10.2.14	Groundnuts/bamabara	<input type="checkbox"/>	10.3.4
10.2.7	Bananas	<input type="checkbox"/>		10.2.15	Trees/timber/poles	<input type="checkbox"/>	10.3.5
10.2.8	Coffee	<input type="checkbox"/>		10.2.16	Fish	<input type="checkbox"/>	

**Market problems (Q10.2 & 10.3 (Col 2))**

Open market price too low .....01    Market too far .....05    Government Regulatory board problems...09  
 No transport .....02    Farmer association problems .....06    Lack of market Information .....10  
 Transport cost too high .....03    Cooperative Problems .....07    Other (specify) .....98  
 No buyer .....04    Trade Union problems .....08    Not Applicable .....99

10.4	What was the main <b>reason for not selling</b> crops during 2002/03 year .....						<input style="float:right;" type="checkbox"/>
------	---	--	--	--	--	--	---

**Reason for not selling crops (Q10.4)**

Price too low .....1    Farmer association problems .....4    Government regulatory board problems ....7  
 Production insufficient to sell.....2    Cooperative Problems.....5    Other (specify) .....8  
 Market too far .....3    Trade Union problems .....6    Not Applicable .....9

**Definition and working page for page 8****Question Specific definitions (Section 9.0)****Crop Storage, Section 9****Method of Storage (column 4)**

- **Locally made structure:** The structures that have been inherited from their fore fathers
- **Improved locally made structure:** Traditional structures that have been improved using modern technology.
- **Normal duration of storage:** Often there are stored stocks from different seasons and different years. The normal duration refers to the number of months that the most of the crop is stored for.

**Marketing problems Q 10.2 and 10.3 col 2:**

- **Farmer Association:** A village or community based group of farmers who have formed an organisation to purchase inputs/sell/store their products in order to achieve a better price for their products.
- **Cooperative Union:** Large inter-village /community organisation set up on a district/regional or national basis for providing inputs, marketing and storing farmers products.
- **Government Regulatory board:** Government control body for setting prices and controlling quality of certain agriculture commodities.

**Procedures for Questions****Q 9.2 Details of Crop Storage:**

1. For the crops listed indicate if the household stored any during 2002/03 in column 2.
2. Check that the crops correspond to the crop lists in Q 7.1.2, 7.2.2 & 7.3.2. If there is a difference inquire on the reason why. It is possible that a crop was missed during the enumeration of these questions and if so make necessary amendments
3. For the listed crops give details of storage.

**Q 10.2 Details on Crop Marketing:**

1. For each of the crops listed indicate the main problems in marketing during 2002/03 in column 2.
2. Check if the crops correspond to the crop lists list in Q 7.1.2, 7.2.2 & 7.3.2. If there is a difference inquire on the reason why. It is possible that a crop was missed during the enumeration of these questions and if so make necessary amendments

**Q 10.3 Ranking of market problems:**

Rank in order of importance the 5 most important marketing problems from the codes in the Market Problems code box.

**Working Area/calculation space**

**11.0 ON-FARM INVESTMENT**

11.1 Does the household practice **irrigation** (Yes=1, No=2)

*If the response is 'NO' go to section 11.3*

S/N	Source of Irrigation water	Method of obtaining water	Method of application	Irrigatable area (acres)	Area of irrigated land this year (acres)
	(1)	(2)	(3)	(4)	(5)
11.1.1	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>

**Source of irrigation water (Col 1)**

River .....1 Borehole .....5  
 Lake .....2 Canal .....6  
 Dam .....3 Tap Water .....7  
 Well .....4

**Method of obtaining water (Col 2)**

Gravity .....1 motor pump .....4  
 Hand bucket .....2 Other .....8  
 Hand pump .....3

**Method of application (Col 3)**

Flood .....1  
 Sprinkler .....2  
 water hose .....3  
 Bucket/watering can .....4

11.2 Does the household have any **erosion control/water harvesting facilities** on their land (Yes=1, No=2)

*If the response is 'NO' go to section 12.0*

S/N	Type of erosion control/water harvesting structure	Number of structures	Year of construction		Type of erosion control/water harvesting structure	Number of structures	Year of construction
	(1)				(2)		
11.2.1	Terraces	<input type="text"/>	<input type="text"/>	→	11.2.5	Tree belts	<input type="text"/>
11.2.2	Erosion control bunds	<input type="text"/>	<input type="text"/>		11.2.6	Water harvesting bunds	<input type="text"/>
11.2.3	Gabions/Sandbags	<input type="text"/>	<input type="text"/>		11.2.7	Drainage ditches	<input type="text"/>
11.2.4	Vetiver Grass	<input type="text"/>	<input type="text"/>		11.2.8	Dam	<input type="text"/>

**12.0 ACCESS TO FARM INPUTS AND IMPLEMENTS**

12.1 Give details of **farm inputs** used during the 2002/03 agriculture year

S/N	Input name	Used Yes=1 No=2	Source	Distance to Source	Source of Finance	Reason for not using	Quality of Input	Plan to use next year Yes =1, No=2
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
12.1.1	Chemical Fertiliser	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12.1.2	Farm Yard Manure	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12.1.3	Compost	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

 not applicable...9

## Definition and working page for page 9

### Overview of Investment activities (Section 11.0)

#### Investment activities:

Investment activities refer to medium to long term farm development structures and projects. This can be Irrigation structures, erosion and water harvesting structures or other permanent or semi-permanent investment made on the land that the household owns.

### Question Specific Definitions (Q 11.1)

**Source of irrigation Water (Col 1):** The main source of water from which water is obtained for irrigation.

**Method of obtaining water (Col 2):** The mechanism by which the water is extracted from the source,

**Application Method (Col 3):** How the water is applied on the field.  
 - Flood - is the application of water down the slope of the land by means of gravity  
 - Sprinkler - is the application of pressurised water through pipes. The water passes through a device which sprays the water onto the crop from above.

**Irrigatable Area (Col 4):** The area the irrigation system is designed to cover in acres.

**Area of irrigated land this year (Col 5):** Area of land under irrigation during the 2002/03 agric year. This is the physical area and NOT the cumulative area of 2 or more croppings.

#### Q 11.1 Irrigation

1. If the hh practices irrigation give details on the main source, main method of obtaining and applying water.
2. Cross check column 8, Q 7.1.2, 7.2.2 & 7.3.2 to check if irrigation was used on any crops.

### Question Specific Definitions (Q 11.3)

#### Erosion control/water harvesting structure (Col 1)

**Terraces:** Are structures constructed on the side of a hill to provide a level ground to plant crops. They are often used to trap water for paddy/lowland rice production.

**Erosion Control Bunds:** These are banks of earth/stones built perpendicular to the slope to slow down water and prevent erosion. They are different to Terraces in that the soil behind the banks are not level.

**Gabions:** A gabion is a wire mesh box filled with rocks/stones and used to control or prevent gully erosion

**Sandbags** Used to prevent or control gully erosion

**Tree belts/Wind breaks:** A band of trees planted perpendicular to the prevailing wind whose main purpose is to slow down wind speed

**Water Harvesting bunds:** A bank of earth constructed horizontal to the slope of the land to trap water. They are usually banana shaped.

**Dam:** A bank of earth/material which traps river water to form a catchment of water behind it.

#### Q 11.3 erosion control/water harvesting

1. Number of structures refers to the number of working/maintained structures and does not include derelict or irreparable structures.
2. Year of construction refers to the year that the structures were first constructed. It is not the year that the structures were last maintained.

### Farm Inputs (Q 12.1.1 to 12.1.7)

**Farm yard Manure:** An organic fertiliser made on farm composed of animal dung.

**Compost:** An organic fertiliser made on farm from decomposed plant material

**Pesticide:** Chemical used to either protect the plant from or kill insects, birds, molluscs, mites, etc attacking the plant

**Fungicide:** is a chemical that s used to protect the plant from or control a fungal disease.

**Herbicide:** A chemical used to control weeds.

#### Q 12.0 Farm Inputs

1. Indicate in column 1 whether each of the inputs are used or not.
2. Complete cols 3, 4, 6, and 7 for inputs that are used and place '9' in column 5 (for not applicable).
3. Complete cols 5 & 7 for inputs not used.

**NOTE:** Cross check column 6, 7, 8 & 9 , Q 7.1.2, 7.2.2 & 7.3.2 to check what inputs were used.

**12.2 Give details of farm implements and assets used and owned by the household during 2002/03 agriculture year**

S/N	Equipment/Asset Name	Number		Used in 2002/03 Yes 1, No=2	Source of Equip-ment	Source of Fin-ance	Reason for not using	Plan to use next year Yes=1, No=2
		Owned	rent -ed					
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
12.2.1	Hand Hoe	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.2	Hand Powered Sprayer	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.3	Oxen	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.4	Ox Plough	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.5	Ox Seed Planter	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.6	Ox Cart	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.7	Tractor	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.8	Tractor Plough	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.9	Tractor Harrow	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
12.2.10	Shellers/threshers	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Trader/trade store .....5 Private individual .....6 Religious Organisation/NGO/Project ...7 Other (Specify).....8

13.3 If the answer to question 13.1 above is 'NO' what is the reason for not using Credit?

**Reason for not using credit (Q13.3)** Not needed ...1 Not available ...2 Did not want to go into debt....3 Interest rate/cost too high.....4  
Did not know how to get credit....5 Difficult bureaucratic procedure ...6 Credit granted too late ...7 Other (specify) ...8 Dont know about credit ....9

## Definition and working page for page 10

### Question Specific Definitions (Q 12.2)

#### Farm Implements (Col 1):

**Hand powered Sprayer:** Knapsack or bicycle pump sprayer

**Reason for not using (Col 6):** Be careful about using "too much labour required" as this code generally refers to hand hoes only. The codes for this should "**NOT**" be read out to the farmer as a prompt.

**Note:** If remittance is given as the main source of finance check for a response to remittances in **question 2.2.5**

### Question Specific Definitions (Q 13.0)

#### Section 13.0 Credit for Agriculture Purposes

Credit is defined as finance in the form of cash or in-kind contributions (eg direct provision of inputs, machinery, livestock or other material) for the purpose of crop and livestock production whereby the value of the credit must be paid back to the borrower. The value of repayment may either be with interest or interest free.

Credit may be paid back in the form of cash or agriculture produce.

#### Section 13.0 Credit for Agriculture Purposes

**Value of credit:** is the amount in cash received from the borrower. If the credit was paid in-kind, estimate the value of this.

**Value of repayment:** This is the amount to be repaid to the borrower and includes the principal amount (value of credit) plus any interest repayment. If the credit is paid back in agriculture produce, then the cash value of this must be estimated.

**Period of repayment:** This is the time in **months** the borrower has given for full repayment.

### Procedures for questions

#### Q 12.0 Farm Inputs

1. Indicate in column 2 and 3 whether each of the implements were used or not.
2. Complete cols 4, 5, 6, and 8 for inputs that are used and place '9' in column 7 (for not applicable).
3. Complete cols 7 & 8 for inputs not used.

#### Section 13.2 Source of agriculture credit

If the farmer obtained credit from more than one source then use the columns "a", "b" and "c" for the different sources of credit. Start with the main source of credit in column "a".

**NOTE:** Check for use of inputs in column 7, 8 & 9 of questions 7.1.2, 7.2.2 & 7.3.2.

### Working Area/calculation space

14.0 TREE FARMING/AGROFORESTRY										
14.1	Did your household have any <b>Planted Trees</b> on your land during 2002/03 agric year? (Yes =1, No=2)									<input type="checkbox"/>
<i>If the response is 'NO' go to section 14.3</i>										
14.2 Give details of the <b>planted trees</b> you have on your land.

## Definition and working page for page 11

### General Definitions for section 14.0

#### Tree Farming/Agroforestry

This section refers to trees **planted** for wood (firewood, poles, planks, carving, charcoal, medicinal, etc, but **NOT** fruit trees). It does **not** include naturally growing trees on the farm (unless special care has been given to promote their establishment) or trees growing naturally on the communal areas.

**Tree farming** is the planting of trees on an area of land for which the main purpose is the production and regeneration of trees for wood on that land.

**Agroforestry:** is the planting of trees on land for the purpose of complementing other farming activities like crop and animal production. For the purpose of this questionnaire Agroforestry trees are trees planted on boundaries and scattered throughout fields. The main productive unit in this case is Crops and Livestock.

### Section 14.2 Details of planted trees

1. Enter the tree codes of the main species grown by the hh
2. If no planks or poles are sold enter a "0" in columns 8, & 9.
3. Total value includes both value of hh utilised trees and sold trees.
4. If no trees were utilised by the hh or sold enter "0" in column 10

### Question Specific Definitions

#### Tree farming (Section 14.0)

**Pole trees (Col 6):** These are young trees which have a maximum diameter of 6 inches at the bottom and are often used for house construction. They are often the thinning harvest after 3 - 5 years.

**Plank trees (Col 7):** Trees for sawing into timber planks.

**Animal shade:** Trees grown for the purpose of providing shade to animals.

#### Community tree planting scheme (Section 14.3)

**Community Forest:** A forest planted on the communal land which is planted, replanted or spot planted by the members of the village.

#### Crop Extension Services (Section 15.1)

**Contact Farmer:** A farmer who is used by the extension agent as a focal point to demonstrate new interventions. The contact farmer then passes on the message to other farmers

**Group member:** Member of a group under which the contact farmer leads

**Adoption:** This is the uptake of an intervention for 2 or more years

### Section 15.1 Crop Extension Services

1. For each of the extension providers ask if the hh received extension during 2002/2003 agriculture year and indicate in column 2.
2. For each of the providers complete the rest of the columns

### Tree Name Guide Col 1

Code	Local Name	Botanical Name	English Name
01		Senna siamea	Cassod tree

## Definitions and working page for page 12

## Question Specific Definitions

Crop Extension Advice (Section 15.2)

Mechanisation/LST: LST means Labour Saving Technology

## Section 16.0 Livelihood constraints

**16.1 List the five most important problems in order of most importance:**

1. Read out the list of constraints to the respondent and ask him to select the ones that are a problem. Place a ✓ against the constraints that are a problem.
2. Read the selected constraints and ask the farmer to select 5 which create the largest problems
3. Ask the farmer to list these in order of importance and enter in column 2

**16.2 List the five least important problems in order of least importance:**

1. Read out the list of constraints to the respondent and ask him to select the ones that are **NOT** a problem. Place an ✗ against the constraints that are **NOT** a problem.
2. Read the selected constraints and ask the farmer to select 5 which create the least problems
3. Ask the farmer to list these in order of least importance and enter in column 2

<b>18.0 CATTLE POPULATION, INTAKE AND OFFTAKE</b>

**Definitions and working page for page 13****General definitions for page 13**

**Cattle Intake during 2002/03:** Cattle purchased, given or born which increases the number of cattle in the herd.

**Cattle Offtake during 2002/03:**

Cattle removed from the herd, either by selling, hh consumption, given away or stolen.

**Question Specific Definitions (Section 18.0)****Cattle type (Q 18.2 & 18.4, Col 1)**

**Bull:** Mature **Uncastrated** male cattle used for breeding

**Cow:** Mature female cattle that has given birth at least once

**Steer:** Castrated male cattle over 1 year

**Heifer:** Female cattle of 1 year up to the first calving

**Calves:** Young cattle under 1 year of age

**Average Value per Head (Q 18.3, (Col 7 & 9) & 18.4 (Col 3, 5 & 7))**

In these columns give the average value per head during 2002/03. For given, traded, consumed by the hh & given away/stolen estimate the value.

**Cattle vaccination (18.5 col 1)**

**ECF:** East Coast Fever

**FMD:** Foot and Mouth Disease

**CBPP:** Contagious Bovine Pleura Pneumonia

**Section 18.0 Cattle Population, Intake & Offtake.**

**NOTE:** Section 18.1 is for the current population (as of 1st October 2003);  
Section 18.2 and 18.3 is for movement in and out of the herd  
during the 2002/03 agriculture year.  
Section 18.4 is for diseases encountered during the agriculture year.

1. If the household has cows, you would normally expect them to have calves in column 8

2. If calves are reported in column 2, 3, or 4 (18.2.6, 18.2.5) then there must be at least that number repeated in column 8

**Note:** If the farmer reports sales of cattle the importance of this must be reflected in Q 2.2.3

**Section 18.5** If cattle are reported to have died in Column 5 then at least that number should be reported in 18.4 col 4

**Working area for page 13**

**Definitions and working page for page 14****Goat definitions for page 14**

**Goat Intake during 2002/03:** Goat purchased, given or born which increases the number of goats in the herd.

**Goat Offtake during 2002/03:**

Goat removed from the herd, either by selling, hh consumption, given away or stolen.

**Question Specific Definitions (Section 19.0)****Goat type (Q 19.2 & 19.4, Col 1)**

**Billy Goat (he-goat):** Mature **Uncastrated** male goat used for breeding

**Castrated goat:** Male goat that has been castrated.

**She Goat:** Mature female goat over 9 months of age

**Kid:** Young goat under 9 months of age.

**Average Value per Head (Q 19.3, (Col 7 & 9) & 19.4 (Col 3, 5 & 7))**

In these columns give the average value per head during 2002/03. For given, traded, consumed by the hh & given away/stolen estimate the value.

**Goat vaccination (19.5 col 1)**

**FMD:** Foot and Mouth Disease

**CCPP:** Contagious Caprine Pleura Pneumonia

**LSD:** Lumpy Skin Disease

**Section 19.0 Goat Population, Intake & Offtake.**

**NOTE:** Section 19.1 is for the current population (as of 1st October 2003); Section 19.2 and 18.3 is for movement in and out of the herd during the 2002/03 agriculture year. Section 19.4 is for diseases encountered during the agriculture year.

1. If the household has she goats, you would normally expect them to have kids in column 8
2. If kids are reported in column 2, 3, or 4 (19.2.6, 19.2.5) then there must be at least that number repeated in column 8

**Note:** If the farmer reports sales of goats the importance of this must be reflected in Q 2.2.3

**Section 19.5** If goats are reported to have died in Column 5 then at least that number should be reported in 19.4 col 4

**Definition and working page for page 17****Question Specific Definitions Section 26.0)****Procedures for questions****Section 23.0 - Other Livestock:**

1. The current number includes both adult and young animals. For example The number of chickens in col 1 would include adults and chicks.

**Question Specific Definitions Section 27.0)****Access to functional Livestock Structures/accessories (Section 27.0):**

**NOTE:** The structures must be functional. If they are not working/derelect then they should not be included. The distance to the next nearest functional structure should be taken.

**Spray Race:** A fixed spray structure on an animal race for spraying acaricide

**Cattle crush:** Corridor structure for restraining cattle.

**Abattoir:** Large building designed for slaughtering a large amount of animals. It normally has complex structures to assist in the slaughter and storage and a high level of hygiene is maintained.

**Slaughter Slab:** Concrete slab designed for slaughtering a small amount of animals

**Hides:** obtained from Cattle

**Skins:** Obtained from sheep and goats

**Hide/Skin Shed:** Shed for curing/tanning animal skins and hides

**Village holding Pen:** Enclosure for containing large amount of livestock which is owned communally.

**Drencher:** Device for orally administering medicine to livestock. If no product was sold in 2002 enter "0" in columns 6, 7 & 9.

**Section 26.0 - Outlets for livestock:**

Using the codes enter the outlets for the sale of different livestock in order of importance. If there are, for example, only 2 outlets mark the rest with a "X".

**28.0 FISH FARMING**

28.1 Was **Fish farming** carried out by this household during 2002/2003? (Yes =1, No=2)  (If the response is 'NO' go to section 29.0)

28.2 Specify details of **fish farming practices**

S/N	Product ion unit number	Fish farming system	Size of unit/pond (m2)	Source of fingerling	frequency of stocking (No/year)	Number of stocked fish			Number of fish harvested	weight of fish harvested	weight of fish sold	Mainly sold to

**30.0 GOVERNMENT REGULATORY PROBLEMS**

31.1 Did you face problems with government regulations during 2002/03 (Y=1, N=2)  (If the response is no go to section 31.0)

List in order of importance

	Problem code	Problem code
30.1.1	1st	<input type="checkbox"/>
30.1.2	2nd	<input type="checkbox"/>
30.1.3	3rd	<input type="checkbox"/>

**Problem code**  
 Land ownership by government...1  
 Restriction of sale between regions...2  
 Import of food items...3  
 Other (specify)...8

**Definitions and working page for page 18****General definitions for Section 28.0**

**Fish farming:** Refers to the rearing/production of fish. It is different to fishing in that the fish have to be reared and fed in fish farming. Fishing traps or captures naturally occurring fish in rivers, lakes and the sea and should not be included in this section.

**Question Specific Definitions (Section 28.2)**

**Production unit number (Col 1):** A production unit is a pond river/lake which is treated as a separate entity for the production of fish eg it may be by virtue of manageable size, maturity of fish, type of fish etc. Eg a farmer may have 3 fish ponds. (each one is a separate production unit).

**Frequency of stocking (Col 5):** What is the number of times the farmer puts new fingerlings into the pond each year.

**Fingerlings:** These are young immature fish used for stocking ponds.

**Sold: (Col 10 & 11)**

If no fish were sold enter "0" in column 10 and 11)

**Livestock Extension Services (Section 29.1)**

**Adopted (Col 3):** This is the uptake of an intervention for 2 or more years

**Livestock Extension Service providers (Section 29.2)**

**Contact Farmer:** A farmer who is used by the extension services as a focal point to demonstrate new interventions to. The contact farmer then passes on the message to other farmers

**Adopted (Col 5):** This is the uptake of an intervention for 2 or more years

**Working area for page 18**

**Definition and working page for page 19****Question specific definitions (Section 31.1)****Activity (Col 1):**

**Land Clearing:** Refers to removing trees/bush/grass prior to ploughing

**Soil Preparation:** Refers to the seedbed preparation (ploughing, harrowing, etc).

**Cattle Rearing:** Tending to cattle at home, eg assisting with births, castration, etc. Different livestock keeping activity to herding.

**Cattle Herding:** Moving livestock from place to place for grazing and water. If herding is carried out the respondent must also give a response to rearing/husbandry

**Question Specific Definitions (Section 32.0.0)****Activity (Col 1):**

**Subsistence:** For the family's survival, rather than for the generation of cash. This includes feeding the hh, provision of water and fuel for cooking. The source of these products are usually from the land resources available to the family. Remember that not all cash earnings are for non subsistence purposes/activities as cash can be used to purchase subsistence items eg food.

**Non -subsistence:** Cash used for items and activities which are not crucial for the survival of the family. This includes modern medication, non working clothes, refined beer, school fees, etc.

**Procedures for (Section 31.1)****Section 31.1 ((Labour use)**

1. For each listed activity in column 1, place a tick in column 2 if any member of the household was involved in that activity during the 2002/03 agriculture year.
2. After completing column 2 return to the first activity in row 27.1.1 and complete column 3.
3. Make sure you stress MAINLY responsible.

**NOTE: If an activity has been mentioned previously in the questionnaire eg that the hh keeps chickens, make sure a response is obtained in the appropriate place ie poultry keeping.**

**If off-farm income generation is mentioned, check for responses to off farm income in other parts of the questionnaire**

**Section 32.0 - Subsistence vs Non-subsistence**

1. For each listed activity in column 1, place a tick in column 2 if any member of the household was involved in that activity during the 2002/03 agriculture year.
2. After completing column 2 return to the first activity in row 32.1.1 and complete column 3 & 4. For each activity make an assessment of the percentage used for subsistence survival and the percent converted to cash for non subsistence goods and items.
3. Make sure you stress MAINLY responsible.

**NOTE: Cross check the responses with previous sections in the questionnaire. eg if a response is given to remittances check for an entry in question 2.2.5**

**Definition and working page for page 20****Household facilities (Section 34):****Number of rooms used for sleeping in the household (Q 34.1)**

Include sitting room, dining room, kitchen, etc if used for sleeping. It also includes rooms outside the main dwelling

A room is defined as a space which is separate from the rest of the building by a permanent wall or division. A building/house that is not divided into rooms is considered to have one room.

**Household assets (Q 34.2):** these assets must be functioning. Do not include if broken.

**Access to drinking water (Q 34.4):** If there is more than one source, use the one, which the hh uses most frequently.

**Main source of hh cash income:**

Activity that provides the hh with the most cash during 2002/03 agriculture year.

Average/maximum yields											
Use this table to compare the yields calculated in sections 7.1, 7.2, and 7.3. They are STRICTLY to be used as guidelines only and the sole purpose is to assist in getting the correct area and harvest for each crop

**Back Page Reference material**

This page contains reference information that may be required to complete some of the questions in the questionnaire.

**Weights and measures**

1 hectare = 10,000 sq metres (100 x 100 metres)  
 1 kilometre = 1000 metres  
 1 acre = 4840 square yards (110 x 44 yards)

**Conversions**

1 hectare = 2.47 acres  
 1 mile = 1.61 Kilometres

**Kg equivalents**

The following standards may be used as a guide to obtain kg if the reported unit is different. Only use these conversions if the respondent is unable to provide weights in kgs.

	Crop Name	Number of Kgs			
		Standard		Non-standard	
		Bag	Tin	Name	kgs

**For official use only:**

If a question has a query, an indication will be made by the supervisor/data entry controller on the front page of the questionnaire. This space is to note what and where the problem is, the action required to be taken and the responsible person to take follow up action.

**Nature of the problem:**

---

---

---

**Action Required:** National supervisor action

Field supervisor action

**Overall Status:** Does not affect overall integrity of the questionnaire.   
 More data is required before it can be used

Discard and resample   
 Discard as missing data
