Quality Data to Support African Progress

Characteristics of Quality Data

- **Relevancy** -The extent to which statistical information meets the needs of clients and users.

- **Accuracy** - The degree to which statistical information correctly describes the phenomenon it is measuring.

- **Timeliness or punctuality** - Quality Data must be available for the intended use within a reasonable time period. Data must be available quickly and frequently enough to support information needs and to influence service or management decisions.

- **Validity** -The case with which the users are able to get hold of statistical information and use it.

.

- **Reliability** - Good quality data should reflect stable and consistent data collection processes across collection points and over time.
