**PREFACE**

At the end of the 2007/08 Agricultural Year, the National Bureau of Statistics (NBS) in collaboration with the Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; the Prime Minister's Office, Regional Administration and Local Government (PMO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources; Livestock and Fisheries conducted the Agricultural Sample Census. This is the fourth Agricultural Census to be carried out in Tanzania, the first one was conducted in 1971/72, the second in 1993/94 and 1994/95 (during 1993/94 data on household characteristics and livestock count were collected and data on crop area and production in 1994/95), and the third was conducted in 2002/03.

The census collected detailed data on crop production, crop marketing, crop storage, livestock production, fish farming, and poverty indicators. In addition to this, the census was large in its scope and coverage as it provides data that can be disaggregated at district level and thus, allow comparisons with the 2002/03 National Sample Census of Agriculture. The census covered smallholders in rural areas only and large scale farms. This report presents data disaggregated at regional and district level and it focuses on small holders crop production and livestock keeping.

The extensive nature of the census in relation to its scope and coverage is a result of the increasing demand for more detailed information to assist in the proper planning of the agricultural sector and in the administrative decentralization of planning to district level. It is hoped that this report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural households in the country.

On behalf of the Government of Tanzania, I wish to express my appreciation for the financial support provided by the development partners, in particular, the Department for International Development (DFID) and the Japanese Government through the Japan International Cooperation Agency (JICA) and others who contributed through the pooled fund mechanism.

My appreciation also goes to all those who in one-way or the other have contributed to the success of the census. In particular, I would also like to mention the enormous effort made by the Planning Group composed of professionals from the Agriculture Statistics Department of the National

Bureau of Statistics, Ministry of Agriculture, Food Security and Cooperatives, Ministry of Livestock Development and Fisheries, Ministry of Water and Irrigation, Ministry of Agriculture, Livestock and Environment, Zanzibar, the Prime Minister's Office, Regional Administration and Local Government, Ministry of Industries, Trade and Marketing and the Office of the Chief Government Statistician, Zanzibar, the Food and Agriculture Organization of the United Nations and the Censuses and Surveys Technical Working Group (CSTWG).

Finally, I would like to extend my sincere gratitude to all the professionals, the consultants, Regional and District Supervisors and field enumerators for their commendable work. Certainly without their dedication, the census would not have been successful.

Dr. Albina A. Chuwa

Director General

National Bureau of Statistics

## EXECUTIVE SUMMARY

The executive summary highlights the main survey results obtained during the National Sample Census of Agriculture 2007/08. This report covers small-scale agriculture households in rural areas of region who were selected using statistical sampling techniques. The results presented in this report do not cover urban areas and large-scale farmers. Highlighted are important findings regarding agricultural production, productivity, husbandry, access to resources, levels of involvement in agricultural and related activities and poverty in Kilimnjaro region, the aim being to present an overview of the rural agricultural households and their levels of involvement in agricultural activities at regional level.

### i) Household Characteristics

The number of agricultural households in region was 242,708 out of which 56,710 (23.4%) were involved in growing crops only, 1,700 (0.7%) rearing livestock only, and 184,298 (76%) were involved in crop production as well as livestock keeping. Agricultural households who were pastoralists were not recorded in Kilimnjaro in the census year. Most of the agricultural households ranked annual crop farming as an activity that provided most of their cash income followed by livestock keeping/herding, followed by fishing

region had a total literacy rate of 89 percent, the highest literacy rate was found in Moshi Rural which recorded the highest literacy rate of 91.4 percent followed by Mwanga (89.9 percent) and Hai (89.3%), Rombo (87.5%), Siha (86.6) and Same (86.1%), thus Same district had the lowest literacy rate. The number of heads of agricultural households with formal education (University and other Higher institutions) in region was 218,445 (100%). Out of this, those without formal education were 3,389 (50%) and those with only adult education were 3,420 (40% percent), and those with neither of the two categories were applicabe were 1,843 (21%).

### ii) Crop Production

#### Land Area

The total area of land available to smallholders was 238,142 ha. The regional average land area utilised for crop production per crop growing household was only 1.0 ha. This figure was below the national average of 1.3 hectares

## **Planted Area**

The area planted with annual crops and vegetables was 180,171 hectares out of which 101,347 hectares (56%) were planted during long rainy season and 78,824 hectares (44%) were planted during short rainy season. An estimated area 115,167 ha (64% of the total planted area with annual and vegetable crops), followed by pulse with 49,521 ha (27.5%), oil seeds & oil nuts 8,124 ha (4.5%), fruits and vegetables 4,847 ha (3 %), roots and tubers 2,483 (1.4%), and cash crops 31ha (0.0%)

- **Maize**

Maize was the dominant annual crop grown in region with a planted area of 107,932 ha followed by beans which had the second largest planted area. The area planted with maize constitute 60 percent of the total area planted with annual crops. Other crops in order of their importance (based on area planted) were beans, sunflower, paddy, cow peas, finger millet, groundnuts, tomatoes, Irish potatoes, ginger, Green gram, cocoyams, Amaranthus, Onions, and sweet potatoes.

- **Beans**

Beans dominated the production of pulse crops in the region. The number of households growing beans in region in both long and short rainy seasons was 184,205. The total production of beans in the region was 24,153 tonnes from a planted area of 46,298 hectares resulting in a yield of 0.5t/ha.

- **Irish Potatoes**

Irish Potatoes had the largest of the area planted with other root and tuber crops, followed by cocoyams, sweet potatoes, and yams. The number of households growing Irish Potatoes in the region was 3,802. This represented 32% of the total root and tuber crop growing households during both seasons in the region.

## **Sunflower**

Sunflower was the leading among Oil seeds and Oils Nuts crops with the total planted area of 6,521 ha, other crops in this category were groundnuts and simsim. The number of households growing Sunflower was 32,618 representing 80 percent of the total Oils and seeds and Oil Nuts growing households in the region, resultiung in a yield of 0.2 t/ha.

### **Fruit and Vegetables**

The total production of fruits and vegetables was 28,215 tonnes, produced in a total area of 4,847 ha. The most widely cultivated fruit and vegetable crop was tomatoes was the most widely grown crop with a production of 17,557 tonnes (62.2% of the total fruits and vegetables produced) followed by Ginger (2,488 tonnes, 9%), Cabbage (1,489 tonnes, 5.3%), Okra (1,367 tonnes, 4.8%), Chillies (1,322 tonnes 4.7%), Onions (1,231 tonnes, 4.4%) and Carrots (634 tonnes, 2.2%), . The production of other fruit and vegetable crops grown in the region was relatively very small amounting to less than a thousand tons each.

### **Permanent Crops**

The area smallholders planted with permanent crops was 197,500 (65% of the area planted with annual and permanent crops in the region). The most important permanent crop in region was banana which had a planted area of 51,361ha, (79.1% of the planted area of all permanent crops) followed by coffee (618 ha, 9.2 ha, 34.8%), sugar cane (146ha, 2.2%), coconut (51ha, 0.8%) and Mango (36ha, 0.5%). The remaining permanent crops collectively had a planted area of 547 ha (8.2.0%).

### **Improved Seeds**

The planted area using improved seeds was estimated at 72,160 ha which represented 40 percent of the total area planted with the annual crops and vegetables. The percentage use of improved seed in the long rainy season was 24 percent, while the corresponding percentage use of improved seeds during short rainy season was 16 percent.

### **Use of Fertilizers**

The use of fertilisers on annual crops is moderate with a planted area of 66,130ha (37 percent of the total planted area of 180,171ha in the region ) during both long and short rainy seasons. Of the area planted with fertiliser organic fertiliser was applied to 22,846 ha representing 35 percent was planted with ferlizers and 43,284 representing 65 percent was planted with inorganic fertilizers. The highest percentage of the area planted with organic fertilizer was Moshi Rural district (31%) followed by Rombo (29%), Same and Mwanga with a moderate application of organic fertiliser of 14 and 10 percents respectively. Likewise, the highest percentage of the area planted with inorganic fertilizer was Moshi Rural district ( 31%) followed by Hai (28%) Siha (15%). Rombo and Same had 8% each. Mwanga had the smallest area planted with inorganic fertilisers of 3 percent.

---

### **Irrigation**

The area of annual crops under irrigation was 36,607 ha representing 20 percent of the total area planted, with Moshi Rural having the largest area under irrigation (40%), followed by Same (24%) and Hai (22%). The area under irrigation during the long rainy season was 16,205 ha accounting for 44 percent of the total area under irrigation. Gravity was the main method of obtaining water for irrigation, accounting for about 93 percent of the methods of obtaining water, followed by hand bucket (4%). The remaining sources of water were less important accounting for less than 4 percent.

### **Crop Storage**

There were 254,401 crop growing households that stored various agricultural products in the region accounting to 100% of the total crop growing households. The most important method of storing crops was airtight drum, applied by 160,331 households (30%), followed by sacks/open drum 151,363 households (28%), locally made traditional structure was used by 72,409 households (14%) and improved locally made structure used by 12,199 households (2%). Other methods were less important accounting for one and less than one percent.

### **Crop Marketing**

The number of households that reported selling crops was 136,518 which represent 57.0 percent of the total number of crop growing households. The percentage of crop growing households selling crops was highest in Moshi Rural (27%) followed by Same (21%), Hai (19%), Rombo (13%) Siha (11%) and Mwanga (10%). Among the marketing problems, low market price was leading reported by 11,255 households of crop growing households. Other problems reported include transport cost being too high (1,188 households), long distances to the markets (188 households) and lack of transport (63 households).

### **Crop Extension Services**

The number of Agricultural households that received crop extension was 200,454 (83.2% of total crop growing households receiving extension in the region) Some districts have more access to extension services than others, with Moshi Rural district having a relatively high proportion of households (35%) that received crop extension messages followed by Rombo (19%), Hai (15%), Same (12.4%), Siha (9%), and Mwanga (9%).

### **Soil Erosion and Water Harvesting Facilities**

The number of agricultural households that had soil erosion and water harvesting facilities on their farms was 54,859 which represent 23 percent of the total number of agricultural households in the region. The proportion of households with soil erosion control and water harvesting facilities was highest in Rombo district (48%) followed by Same (38%), Mwanga (20%), Moshi Rural (14%) Same (25%), Siha (10.4%), and Hai (8%).

### **iii) Livestock and Poultry Production**

#### **Cattle**

The total number of cattle in the region was 494,135, representing 2.3 percent of the total cattle population on Tanzania Mainland. The number of indigenous cattle in region was 321,171 (65 % of the total number of cattle in the region). The total number of improved cattle in region was 172,964 cattle out of which 10,980 were for beef breed and 161,984 were for dairy breed.

- **Goats**

The number of goat-rearing-households in region was 112,088 (47% of all agricultural households in the region) with a total of 644,334 goats giving an average of 6 head of goats per goat-rearing-household. Moshi Rural had the largest number of goats (33.2% of all goats in the region), followed by Rombo (26.8%), Same (14.2%), Siha (10.4%), Hai (8.7%) and Mwanga (6.6%).

- **Sheep**

Pig population increased from 51,372 in 1999 to 155,070 in 2003 at a growth rate of 50 percent. The pig population decreased at a growth rate of -4 percent from 155,070 in 2003 to 123,696 in 2008. The number of sheep-rearing households was 63,608 (26% of all agricultural households in region) rearing 355,961 sheep, giving an average of 6 heads of sheep per sheep-rearing household.

- **Pigs**

Piggery is the least important livestock keeping activity in the region after cattle, goats and sheep. The region ranks 4th out of 21 Mainland regions and has 9 percent of the Mainland total pigs.

- **Chicken**

The poultry sector in region was dominated by chicken production. The number of households keeping chicken was 182,949 raising about 1,657,479 chickens. This gives an average of 9 chickens per chicken-rearing household. Out of the total chicken raised in the region 1,521,980 were indigenous chicken, accounting for 92% and 135,500 were improved chicken accounting for 8%. Moshi Rural had the highest number of chicken raised in the region (617,620 chicken, 37.3), followed by Hai (241,215 chicken, 14.6%)

**Use of Draft Power**

Use of draft animals to cultivate land in region is encouraging 24,313 households (10% of the total agricultural households in the region) using them. The number of households that used draft animals in Siha district was 8,316 (34% of the households using draft animals in the region). Moshi Rural district had the second highest number of households using draft animals at 5,922 (24%), followed by Mwanza (2,476 households, 10%), Same (352 households 1.4%) and Rombo (216 households, 1%)

**iv) Poverty Indicators****Availability of Toilets**

A large number of rural agricultural households use traditional pit latrines (196,610 households, 81% of all rural agricultural households). This is followed by improved pit latrines (30,195 households, 12.4%) flush toilets (12,176 households 5%),. However, 3,371 households (1.4%) in the region had no toilet facilities.

**Household Assets**

Out of all assets, the radio was the most common household assets and was owned by 84% of the households, followed by Mobile phones (58.1%), Pressing Iron (55%), Bicycle (30%) wheelbarrow (25.2%), vehicles (8%), Refrigeratorss (6%), and Motor Cycles (3.2%).

**Source of Lighting Energy**

Hurricane lamp was the most common source of lighting energy in the region. About 40 percent of the total rural households used this source of energy followed by wick lamp (39%), main electricity (16), and pressure lamp (4%), the remaining constitute less than (5%).

**Energy for Cooking.**

The most prevalent source of energy for cooking was firewood, which was used by 96 percent of all rural agricultural households. The second most common source of energy for cooking was charcoal (2 percent), Mains Electricity (1.11%), and crop residue (0.8%). The rest of energy sources accounted for less than 1 percent each. These were solar energy (0.1%), Gas (Biogas) (0.2%), bottled gas (0.3%) paraffin/kerosene (0.2%),

- **Roofing Materials**

The most used roofing material (for the main dwelling) was iron sheet and was used by 93% of the rural agricultural households. It was followed by grass/leaves (5%), grass / mud (0.7%), tiles (0.6%), asbestos (0.2%) and Concrete and Others each 0.1 percent.

- **Number of Meals per Day**

About 55% of the households in the region took three meals per day, 38% took two meals, 7 percent took one meal and 0.5 percent took four meals. The region did not report any households as having four and above meals per day.

3.49	Number and Percent of Households Using Grass/Leaves as roofing material by District .....	84
3.50	Number and Percent of Households Eating 3 meals Per Day by District .....	87
3.51	Number and Percent of Households Eating Once Meat per Week by District.....	87

## **1 Background Information**

### **1.1 Introduction**

In this section of the report a brief description of the regional profile is presented with specific focus on geographical location, land area, climate, administrative set up, population and socio-economic indicators. This is to enable the reader with a general understanding of the region and its resources.

### **1.2 Geographical Location and Boundaries**

Tanga region is situated at the North-East corner of Tanzania between 4° and 6° degrees below the Equator and 37° -39°10' degrees East of the Greenwich Meridian. It (Tanga) shares borders with Kenya to the North, Morogoro and Coast regions to the South, Kilimanjaro and Arusha regions to the West and the Indian Ocean to the East.

The region comprises of eight districts. These are Lushoto, Korogwe, Muheza, Tanga, Pangani, Handeni, Kilindi, and Mkinga. The region headquarters is located in Tanga District.

### **1.3 Land Area**

The region has a total area of 13,209 km<sup>2</sup>, or 1.4% of the Area of the entire Tanzania Mainland

### **1.4. Temperature**

In the Mountainous areas temperature range from about 15c – 30c . The soil of the region vary but are dominated by alluvial soil in the lowland areas which through irrigation have high agricultural potential .This is a blessing since the lowland have unreliable rainfall in the highland the soil being of volcanic origin are very fertile. Mount Kilimanjaro's rain shadow dramatically reduces rainfall

#### **1.4.1 Rainfall**

The region has two main rainy seasons - the short and the long rainy seasons. The short rainy season (Vuli) is from September to November and the long rainy season (Masika) is from April to Mid June

### **1.5 Population**

According to the 2002 Population and Housing Census, Kilimanjaro had a total of 1,376,702 inhabitants and representing 4.1% of Total population of Tanzania Mainland

## **2.0 INTRODUCTION**

This section provides technical and operational description of the National Sample Census of Agriculture (NSCA), carried out in the rural areas of Tanzania Mainland and Tanzania Zanzibar during the 2007/08 agricultural year. It details the background and the rationale for carrying out the NSCA in 2002/03 agricultural year. It also explains the sampling procedures, designing and implementation of the data processing system.

This report (Volume Vn) is among the 21 regional reports for the Mainland. Other Census reports include the Technical Report (Volume I), Crop Sector Report at National level (Volume II), Livestock Report at National level (Volume III), Large Scale Farms Report (Volume IV), Regional Reports (Volume V series), Zanzibar Livestock Report (Volume VI) and Zanzibar Crop Sector Report (Volume VII). Unlike the 2002/03 Agricultural Sample Census, the 2007/08 Sample Census does not have a separate report for Smallholder Household Characteristics and Access to Natural Resources Report. Other thematic reports will be produced depending on the demand and availability of funds.

This report is divided into five main sections; Background Information, Introduction, Census Results, District Profiles and Appendices. The definitions relating to all aspects of this report can be found in the questionnaire.

### **2.1 The Rationale for Conducting the National Sample Census of Agriculture**

The Government of Tanzania has embarked on various plans geared to eradicate poverty by the year 2025 and Tanzania Zanzibar by the year 2020. In order to facilitate intervention and monitoring activities of the Poverty Monitoring Master Plan, the government has planned a series of censuses and surveys to assist in policy formulation, planning and to track changes in the wellbeing of the population of Tanzania. In this Master Plan, a series of Agricultural Censuses have been planned, the first one was undertaken in 2002/03 agricultural year and the second in 2007/08.

Demands for reliable and timely agricultural data have become significantly increasing for monitoring outcomes and progress of the poverty monitoring tools like the Agricultural Sector Development Programme (ASDP) and performance of the respective MDAs (ASLMs).

Following the decentralization of the Government's administration and planning functions, there has been a pressing need for agricultural and rural development data disaggregated at regional and district level. The provision of district level estimates will provide essential baseline information on the state of agriculture that supports decision making by the Local Government Authorities and in the design of District Agricultural Development and Investment Projects (DADIPS). The increase in investment is an essential element in the national strategy for growth and reduction of poverty.

## **2.2 Census Objectives**

The 2007/08 Agricultural Sample Census was designed to meet the data needs of a wide range of users down to the district level including policy makers at local, regional and national levels, rural development agencies, funding institutions, researchers, NGOs, farmers organizations, and the like. The dataset is both extensive in its sample and detailed in its scope and coverage to meet the user demand.

The census was carried out in order to:

- Identify structural changes, in the size of farm household holdings, crop and livestock production, farm inputs and implement use. It also seeks to determine if there are any improvements in the rural infrastructures and the level of agricultural household living conditions.
- Provide benchmark data on productivity, production and agricultural practices in relation to policies and interventions promoted by the Ministry of Agriculture and Food Security and other stakeholders.
- Establish baseline data for the measurement of the impact of high level objectives of the Agricultural Sector Development Programme (ASDP), National Strategy for Growth and Reduction of Poverty and other rural development programmes and projects.

### **2.2.1 Census Scope and Coverage.**

The 2007/08 Agricultural Sample Census was conducted for both large and small scale farms. The data was collected from a sample of 52,635 small scale agricultural households of which 48,880 were from the Mainland and 4,755 from Zanzibar. To meet National estimates, data was also

---

collected from 1,006 Large Scale Farms (968 on the Mainland and 38 in Zanzibar) on a complete enumeration basis.

Three different questionnaires were used to collect data on agriculture and related aspects. These were:

- Small scale farms questionnaire;
- Community questionnaire; and
- Large scale farm questionnaire.

The small scale farm questionnaire was the main census instrument which included questions related to crop and livestock production and practices; population demographics; access to services; resources and infrastructure; issues on poverty and gender. Main subjects covered during the study include:-

- Household demographics and activities of the household members;
- Land access/ownership/tenure and use;
- Crop and livestock production and productivity;
- Access to inputs and farming implements;
- Access and use of credits;
- Crop marketing, storage;
- Fish farming;
- Investment activities: Irrigation structures, water harvesting, erosion control;
- Off farm income;
- Household living conditions (housing, sanitary facilities, etc);
- Livelihood constraints; and
- Poverty Indicators.

The community level questionnaire was designed to collect village data such as access and use of common resources, community tree plantation and seasonal farm gate prices.

Large Scale Farm questionnaire was administered to all the large scale farms either privately or corporately managed. However, the analysis of Large Scale Farms is presented in a separate report (Volume IV).

### **2.3 Census Methodology**

The main focus at all stages of the census execution was on data quality and this has been emphasized all the time. The main activities undertaken include:

- Census organization;
- Tabulation plan preparation;
- Sample design;
- Design of census questionnaire and other instruments;
- Pilot test;
- Training of trainers, supervisors and enumerators;
- Information Education and Communication (IEC) campaign;
- Data collection;
- Field supervision and consistency checks;
- Data processing:
  - Scanning,
  - Structure formatting application,
  - Batch validation application,
  - Manual data entry application,
  - Tabulation preparation using SPSS;
- Table formatting and charts using Excel, maps generation using Arc GIS and Excel, Report preparation using Ms Word and Excel.

#### **2.3.1 Census Organization**

The census was conducted by the National Bureau of Statistics (NBS) in collaboration with Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; and the Prime Minister's Office, Regional Administration and Local Government in Tanzania Mainland. The Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources, Livestock and Fisheries in Tanzania Zanzibar.

At the national level, the Census was headed by the Director General of the National Bureau of Statistics, Tanzania Mainland in collaboration with the Chief Government Statistician, Tanzania Zanzibar. The planning Group formed by the Director General of NBS and the Chief Government Statistician consisted of staff from the Department of Agriculture Statistics of NBS, Department of

---

---

Economic Statistics of OCGS, Department of Policy and Planning of the Ministry of Agriculture, Food Security and Cooperatives, Department of Policy and Planning of the Ministry of Livestock and Fisheries Development in the Mainland. Ministry of Livestock and Fisheries and the Ministry of Agriculture and Natural Resources in Zanzibar.

The Planning Group was responsible for all the census operations. Implementation of the census activities at the regional level was overseen by the Regional Statistical Managers of NBS and the Regional Agricultural Supervisors from the Prime Minister's Office, Regional Administration and Local Government. At the district level, the census activities were managed by two supervisors from the Prime Minister's Office, Regional Administration and Local Government (PMO-RALG). The supervisors managed the enumerators who also came from PMO-RALG. As for Zanzibar, implementation of the census activities at the regional level was overseen by the Regional Statistical Officers and Regional Agricultural Officers. At District level, implementation of the census activities were managed by District Agricultural Development Officers (DADOs). In addition, there was a national mobile team to supervise the census operations.

The Censuses and Surveys Technical Working Group (CSTWG) under MKUKUTA provided support in sourcing financing, approving budget allocation and monitoring progress of the census. A Technical committee for the census was established with members from key stakeholder organizations and its main function was to approve the proposed instruments and procedures developed by the Planning Group. It also approved the tabulation and analytical reports prepared from the census data.

### **2.3.2 Tabulation Plan Preparation**

The tabulation plan was developed considering the tabulations from previous censuses and surveys to allow trend analysis and comparisons as well as the needs of end users.

### **2.3.3 Sample Design**

The Mainland sample consisted of 3,192 villages. These villages were drawn from the National Master Sample (NMS) developed by the National Bureau of Statistics (NBS) to serve as national framework for the conduct of household based surveys in the country. The National Master Sample was developed from the 2002 Population and Housing Census. The total Mainland sample was 47,880 agricultural households. In Zanzibar, a total of 317 Enumeration Areas (EAs) were selected

and 4,755 agricultural households were covered. National wide, all regions and districts were sampled except four urban districts (three from Mainland and one from Zanzibar).

In both Mainland and Zanzibar, a two stage sample was used. The number of villages/Enumeration Areas (EAs) was selected for the first stage with a probability proportional to the number of villages/EAs in each district. In the second stage, 15 households were selected from a list of households in each village/EA using systematic random sampling. Table 1.1 gives the sample size of households, villages and districts for the Mainland and Zanzibar.

**Table 2.1: Census Sample**

Description	Mainland	Zanzibar	Total
Households	47,880	4,755	52,635
Villages/EAs	3,192	317	3,509
Districts	133	9	142
Regions	21	5	26

### 2.3.4 Questionnaire Design and Other Census Instruments

The questionnaire was designed following users meetings to ensure that the questions asked were in line with the users data needs. Several features were incorporated into the design of the questionnaire to increase the accuracy of the data as follows:

- Where feasible, all variables were extensively coded to reduce post enumeration coding errors;
- The definitions for each section were printed on the opposite page so that the enumerator could easily refer to the instructions whilst interviewing the respondent;
- The responses to all the questions were placed in boxes printed on the questionnaire, with one box per character. This feature made it possible to use scanning and Intelligent Character Recognition (ICR) technologies for data capture;
- Skip patterns were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent; and

- Each section was clearly numbered, which facilitated the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS.

Three other instruments were used:

- Village Listing Forms were used for the listing of households in the village/EA and from this list, a systematic sample of 15 agricultural households were selected;
- A training manual which was used by the trainer for the cascade/pyramid training of supervisors and enumerators; and
- Enumerator's Instructions Manual was used as reference material.

### **2.3.5 Field Pilot-Testing of the Census Instruments**

The questionnaire was pilot-tested in four locations (Arusha, Dodoma, Unguja and Pemba). This was done to check the wording, flow and relevance of the questions and to finalize crop lists, questionnaire coding and manuals. In addition, several data collection methodologies had to be finalized, namely; livestock numbers in pastoral communities, mixed cropping, use of percentages in the questionnaire and finalizing skip patterns and documenting consistency checks.

### **2.3.6 Training of Trainers, Supervisors and Enumerators**

During the training, a cascade/pyramid training techniques were employed to maintain statistical standards. The top level of training was provided to 78 national and regional supervisors (65 from Mainland and 13 from Zanzibar). The trainers were members of the Planning Group from the National Bureau of Statistics, the sector Ministries of Agriculture and Office of the Chief Government Statistician, Zanzibar. In each region, three training sessions were conducted for the district supervisors and enumerators. The training concentrated on questionnaires, listing forms, field level census methodology and definitions. Emphasis was placed on consistency checking in the field. Tests were given to the enumerators and supervisors and the best 50 percent of the trainees were selected for the actual field work. The remaining 50% were assigned the work of listing the households in the villages they belong and they were later terminated. The best trained enumerators were assigned to list the remaining villages. Each enumerator was assigned to enumerate two villages.

### **2.3.7 Information, Education and Communication (IEC) Campaign**

Radios, televisions, newspapers, leaflets, t-shirts and caps were used to create awareness of the Agricultural Sample Census to the public. This strategy helped in sensitizing the public for the field level activities in order to increase the response rate. The t-shirts and caps were given to the field staff and the village chairpersons. The village chairpersons assisted to locate the selected households.

### **2.3.8 Data Collection**

Data collection activities for the 2007/08 Agricultural Sample Census lasted for three months from June to August 2009. The direct interview method was used to collect data during the enumeration. Data collection was monitored by a hierarchical system of supervisors which included the Mobile Response Team, Regional and District Supervisors. The Mobile Response Team headed by the Manager of Agriculture Statistics Department, provided the overall direction to the field operations and responded to queries arising outside the scope of the training exercise. Decisions made on the definitions and procedures were then communicated back to all the enumerators via the Regional and District Supervisors. On the Mainland, each region had 2 Regional Supervisors (total of 42) and 2 district supervisors per district, (Total 266).

District supervision and enumeration were performed by staff from the Prime Minister's Office, Regional Administration and Local Government and the sector Ministry of Agriculture (PMO-RALG). Regional and national supervision was provided by senior staff from the NBS and sector Ministries of Agriculture. In Zanzibar, the enumeration was conducted by staff from the Ministry of Agriculture and Natural Resources and Ministry of Livestock and Fisheries. Supervision was provided by senior officers of the same Ministries and the Office of the Chief Government Statistician.

During the household listing exercise, some 3,192 extension staff participated on the Mainland. A total of 177 enumerators participated during the listing exercise and enumeration using the small holder questionnaire in Zanzibar. A total of 1,596 enumerators were involved in data collection using the small holder questionnaire on the Mainland. Additional five percent of the enumerators were held as reserves in case of drop outs during the enumeration exercise.

### **2.3.9 Field Supervision and Consistency Checks**

Enumerators were trained to probe the respondents until they were satisfied with the responses before they recorded them in the questionnaire. The first check on the questionnaire was carried out by the enumerators in the field during enumeration, followed by District, Regional and National supervisors. Supervisory visits at all levels of supervision focused on checking the completeness of the questionnaires and consistency. Inconsistencies encountered were corrected, and where necessary, a call back to the respondent was made by the enumerator to obtain the correct information. Further quality control checks were made by the district supervisors.

### **2.3.10 Data Processing**

Data processing involved the following process:

- Data entry;
- Data structure formatting;
- Batch validation; and
- Tabulation.

#### **Data Entry**

Scanning and ICR data capture technology was used. This did not only increase the speed of data entry but also increased the accuracy due to reduction of keystroke errors. Interactive validation routines were incorporated into the ICR software to trap errors during the verification process. Prior to scanning, all the questionnaires underwent a manual cleaning exercise by checking that the questionnaire had a full set of pages, correct identification and good hand-writing. A score was given to each questionnaire based on the legibility and the completeness of enumeration. This score was used to assess the quality of enumeration and supervision. CSPro was used for data entry of the questionnaires that were rejected by the ICR extraction application.

#### **Batch Validation**

A batch validation program was developed in CSPro in order to identify inconsistencies within a questionnaire. This was in addition to the interactive validation during the ICR extraction process. The procedures varied from simple range checking within each variable to more complex checking between variables. After data cleaning, the tables were prepared based on a pre-designed tabulation plan.

**Tabulation**

Statistical Package for Social Sciences (SPSS) was used to produce the census tables and Microsoft Excel was used to organize the tables and compute the additional indicators. Excel was also used to produce charts while Arc GIS was used for generating the maps.

**Report Writing**

The report writing was outsourced to Sokoine University of Agriculture. It focused on the regional comparisons, time series and national estimates. Microsoft Excel was used to produce charts; Arc GIS and Excel were used to generate maps, whereas Microsoft Word was used in compiling and report writing.

**Data Quality Control**

A great deal of emphasis was placed on data quality throughout the whole exercise, from planning; questionnaire design, training, supervision, data entry, validation and cleaning/editing. As a result of this, it is believed that the census is highly accurate and representative of what was experienced at the field level during the census year. With very few exceptions, the variables in the questionnaire are within the norms for Tanzania and they follow the expected time series trends when compared to historical data.

**2.4 Funding Arrangements**

The 2007/08 Agricultural Sample Census was supported mainly by the Department for International Development (DFID) and the Japan International Cooperation Agency (JICA) which together, financed most of the operational activities. Other funds for the census activities were from the Government of Tanzania. In addition, technical assistance was provided by the Food and Agriculture Organisation (FAO).

### 3. CENSUS RESULTS

This part of the report presents the census results for region, based on the statistical data tables presented in Appendix A2. The results are presented in various forms including brief summaries, charts, condensed tables, graphs and s to facilitate understanding of information among the users.

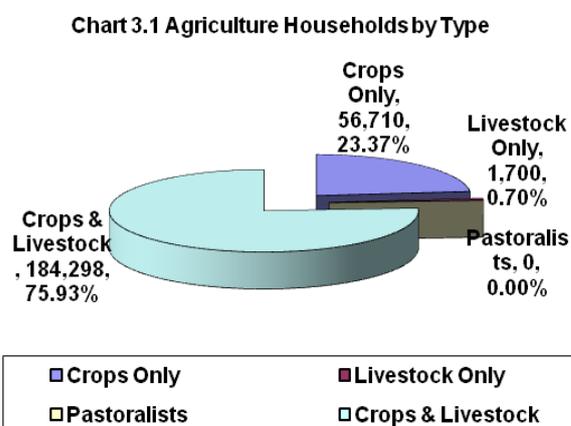

Comparisons are made between related variables and between districts. Comparisons are also made between the current and the 2003 surveys results. The results are divided into four main sections which include household characteristics, crop results, livestock results and poverty indicators. In comparison, as for the 2003 censuses, in the current survey more effort has been expanded in analyzing the results in order to formulate solid conclusions.

#### 3.1 Household Characteristics

##### 3.1.1 Type of Household

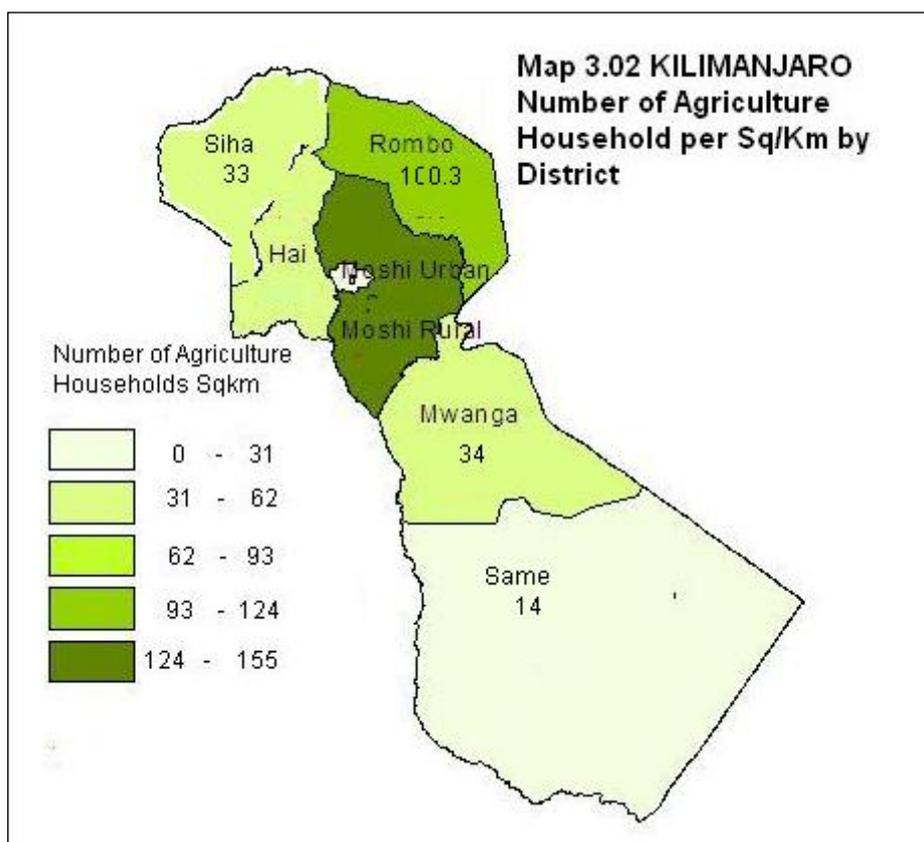

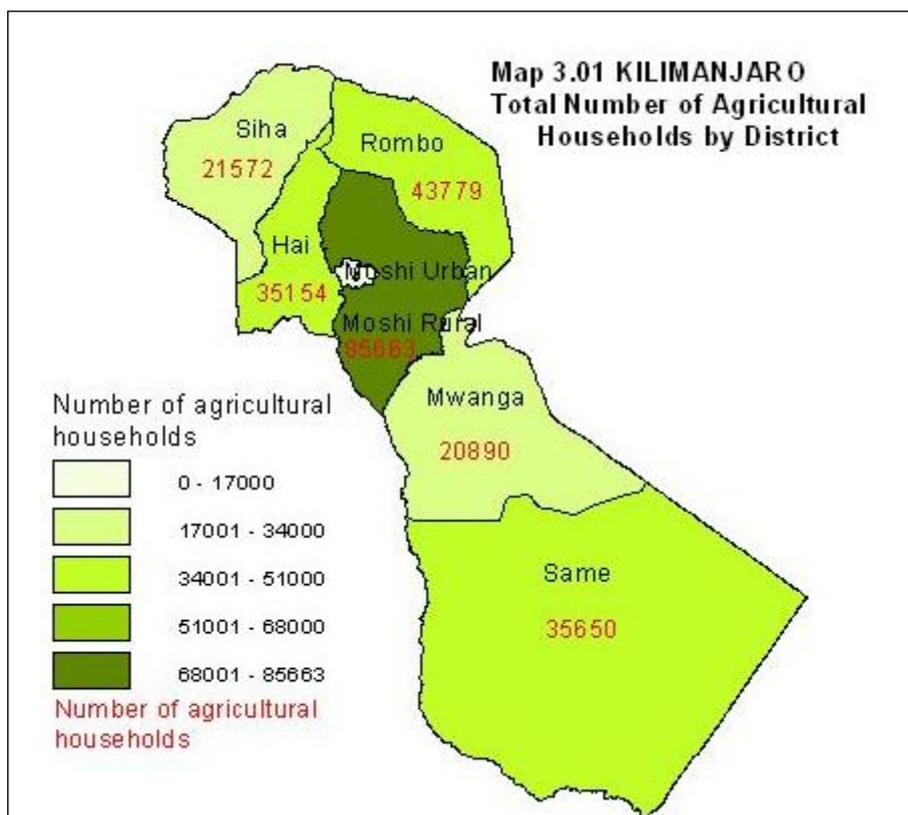

region had a total of 242,708 agricultural households. Out of this total, Moshi Rural had the largest number of agricultural households (85,663), and thus leading by 35 percent followed by Rombo (43,779 households, that is 18 percent), Same (35,650 households, 15 percent) and Hai (35,154 households, 14 percent). Mwanga and Siha had the least number of agricultural households that is 20,890 and 21,572 households respectively amounting to only 9 percent in each of the two districts. Overall, the total number of agricultural households available for 2007/08 agricultural census was slightly higher in most districts (except Rombo and Hai) than was the case for the 2003 agricultural census. For Hai district the number of agricultural households went down because the district was divided into two districts, Hai and Siha.

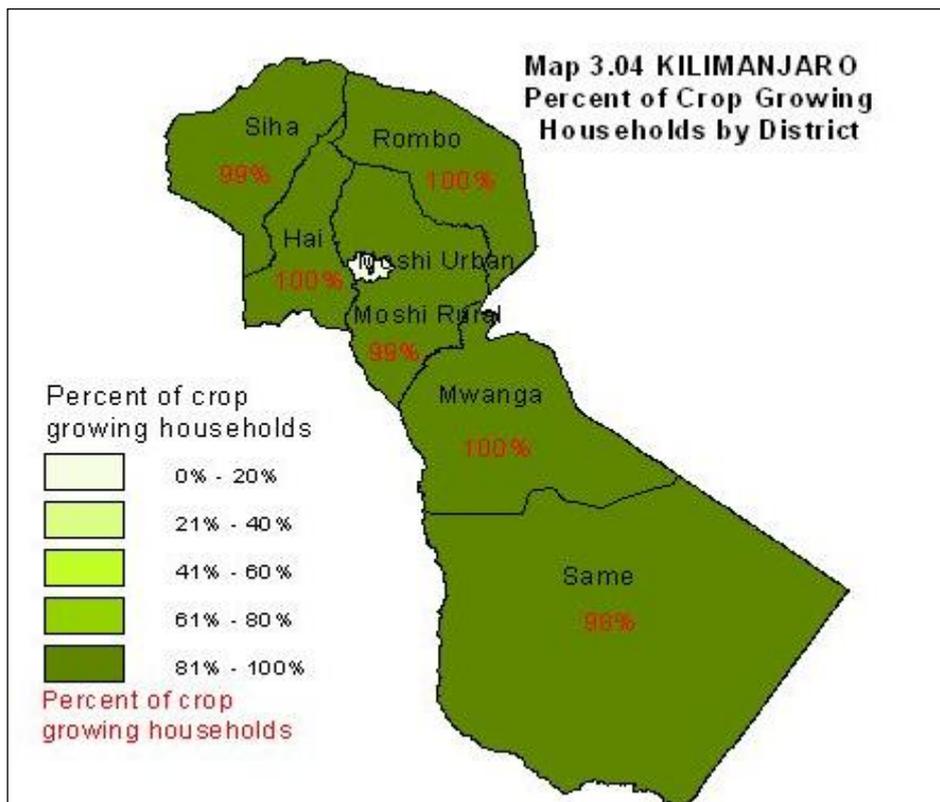

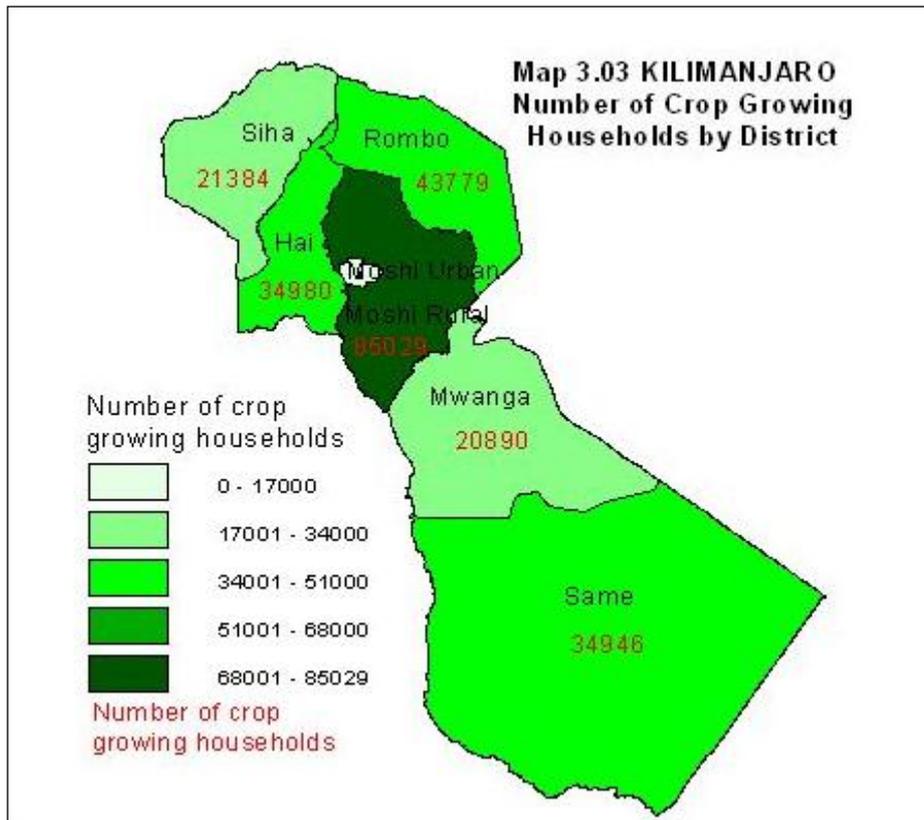

Agricultural household by type indicates that crops and livestock keeping was practiced by most households (185,997) that is 77.2 percent, followed by crops only (56,710 households) that is 23.4 percent. Livestock only was practiced by the smallest number of agricultural households (1,700) that is 0.7 percent. There were no households engaged in pastoral activities. This was unlike in the 2003 agricultural census report which indicates that pastoral activities were practiced by a small number of agricultural households (35, 0.1%) in Region. (Table 3.1, Chart 3.1 and 3.01, 3.02, 3.03, 3.4, 3.05 and 3.06)

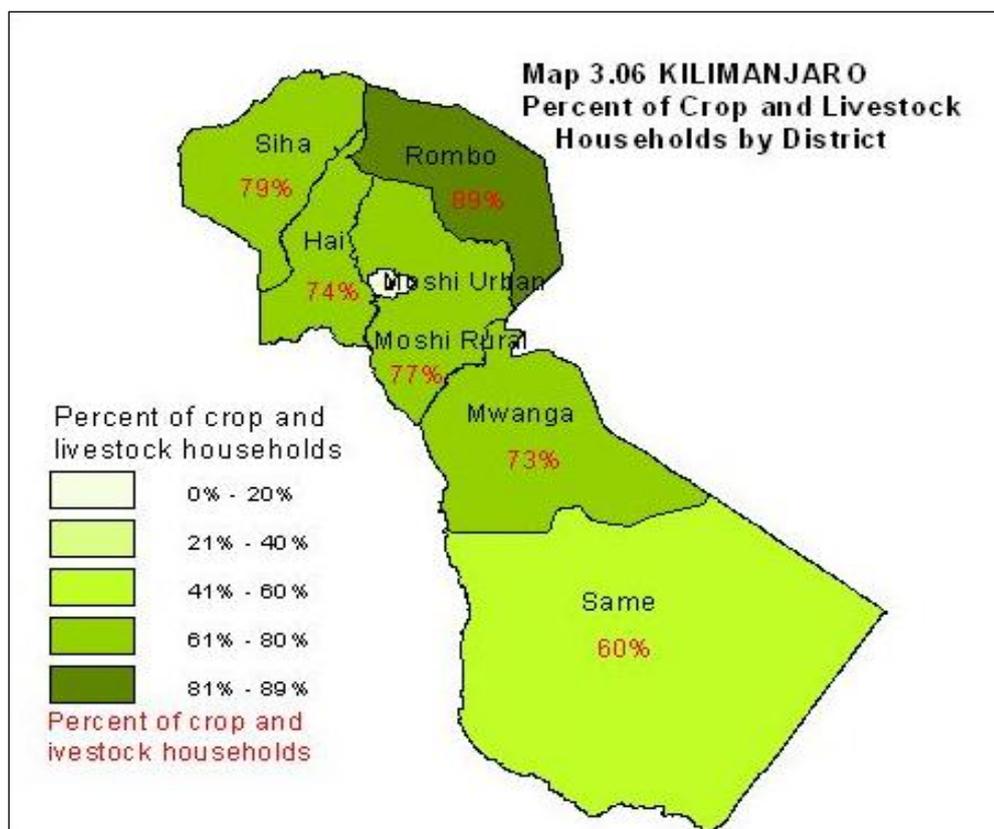

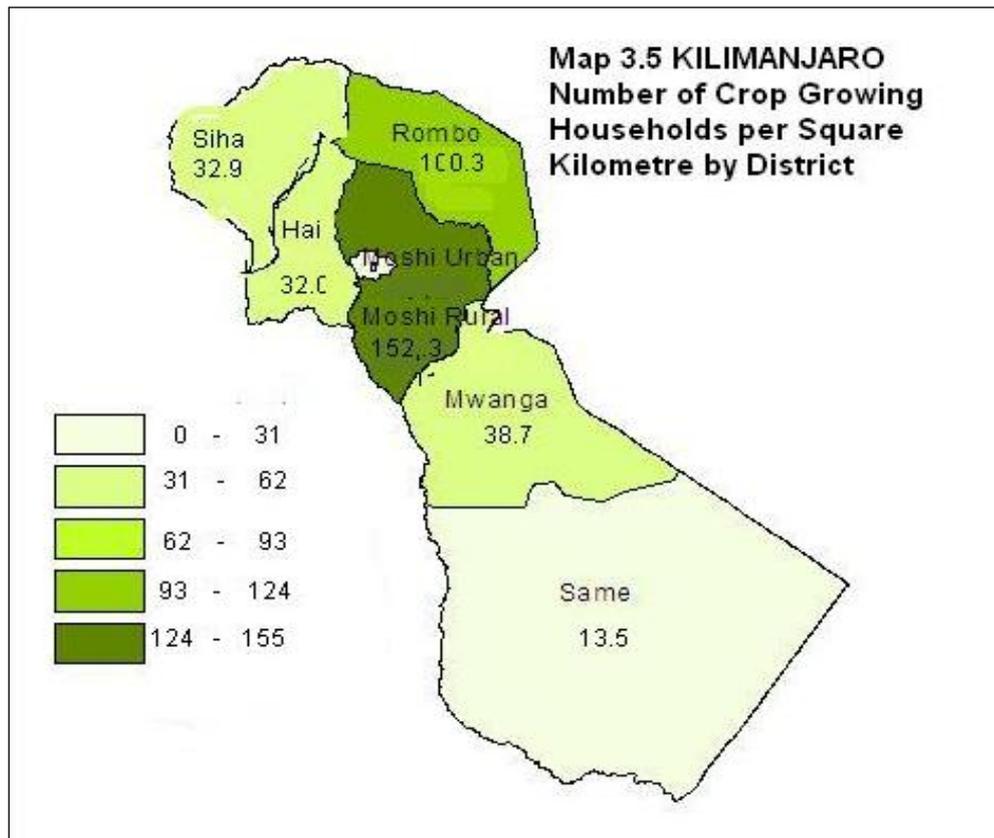

**Table 3.1 Agricultural Households by Type and by District**

District	Crops Only	Livestock Only	Pastoralists	Crops & Livestock	Total	Percentage
Rombo	4,864	0	0	38,914	43,779	18
Mwanga	5,674	0	0	15,216	20,890	9
Same	13,732	704	0	21,214	35,650	15
Moshi Rural	19,036	635	0	65,992	85,663	35
Hai	9,027	174	0	25,953	35,154	14
Siha	4,377	188	0	17,008	21,572	9
Total	56,710	1,700	0	184,298	242,708	100

### 3.1.2 Livelihood Activities/Source of Income

Crop/seaweed farming was practiced by most agricultural households 432,159 (41%) as the main source of income in all the districts. This was followed by livestock keeping/herding which was practiced by 12,283 (1%) households across the six districts. Fishing was the third most important occupation in all districts, except Siha district where no household reported to have been practicing fishing. Livestock pastoralist was reported to be practiced in Siha, Hai and Mwanga. Lastly, fish farming was reported in Moshi Rural and Hai.

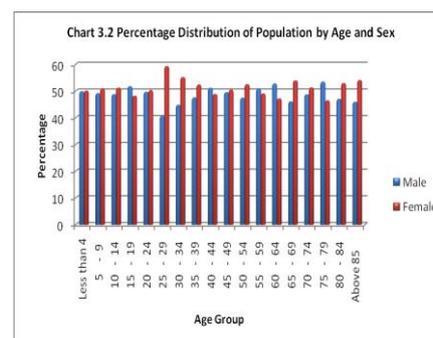

Moshi rural had the largest number of households (137,695) practicing crop/seaweed farming followed by Rombo (83,882). This is by virtue of the fact that district wise, Moshi Rural had the largest number of agricultural households, and also because crop/seaweeds farming was the major economic activity among agricultural households across the districts. Crop farming was least practiced in Mwanga and Siha by only 34,250 and 41,393 households respectively, and moderately practiced in Same and Hai by only 72,356 and 62,582 households respectively. Same had the largest number of households practicing livestock keeping (4,753) followed by Rombo (2,054). Moshi Rural was also leading in fishing followed by Mwanga, Hai and Rombo (Table 3.2).

**Table 3.2: The Livelihood Activities/Source of Income of the Households Ranked in Order of Importance by District**

District	Main Activity									
	Crop/Seaweed Farming		Livestock Keeping / Herding		Livestock Pastoralist		Fishing		Fish Farming	
	Number	%	Number	%	Number	%	Number	%	Number	%
Rombo	83,882	42	2,054	1	0	0	108	0	0	0
Mwanga	34,250	39	1,496	2	52	0	206	0	0	0
Same	72,356	45	4,753	3	0	0	88	0	0	0
Moshi Rural	137,695	37	1,904	1	0	0	635	0	212	0
Hai	62,582	44	1,389	1	87	0	174	0	174	0
Siha	41,393	45	688	1	250	0	0	0	0	0
Total	432,159	41	12,283	1	388	0	1,211	0	385	0

### 3.1.3 Sex and Age of Household members

The number of male agriculture household members in region was 558,636 (49%) of the total regional agricultural household members whilst that of female was 583,649 (51%) of the total regional agricultural household members) (Chart3.2).

The percentage trend shows that there are slight variations between male and female agricultural household members across all the age groups, with some age groups (15-19, 40-44, 55-59, 60-64, 75-79) having slightly more males than females whilst in other age groups (25-29, 30-34, 35-39, 50-54, 65-69 and above 80 year) having slightly more females than males. On the whole, female agricultural household members are more concentrated in the middle and old ages whilst male agricultural household members are more concentrated in between the middle and old ages (Chart 3.2).

### 3.1.4 Level of Education

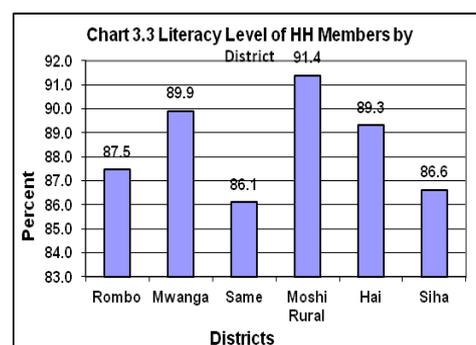

Information on literacy and education attainment were obtained from persons in all households aged five years and above in all the districts.

#### 3.1.4.1 Literacy

Literacy is based on the ability to read and write Kiswahili, English or both. The information on literacy level for family members aged five years and above was obtained by asking individual private households if their respective family members could read and write in Kiswahili only, English only, both English and Kiswahili or in any other language.

#### 3.1.4.2 Literacy Level for Household Members

region had a total literacy rate of 89 percent. Moshi rural recorded the highest literacy rate of 91.4 percent followed by Mwanga (89.9 percent) and Hai (89.3%). The lowest literacy rate was recorded in Same (86.1%), whilst Rombo and Siha had moderate literacy rate of 87.5 and 86.6 percents respectively. Comparatively, all the districts

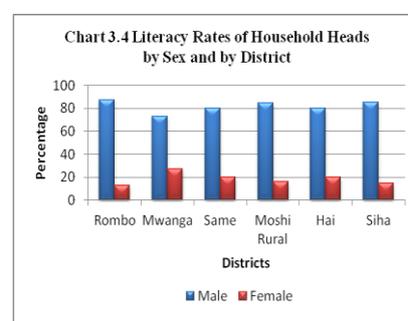

recorded slightly higher literacy rates in 2007/08 than the literacy rates recorded in the 2002/03 census. Also the percentage literacy rate trend shows that districts did not maintain similar positions to those recorded in the previous census ; in that the districts that recorded the highest literacy rate in the last census survey (Mwanga) no longer holds this position (the district recorded moderate literacy rate in 2007/08); and that the district that recorded the lowest literacy rate last census (Hai) no longer holds this position (the district recorded moderate literacy rate in 2007/08 which is an improvement) except for Same which has continued to record the lowest literacy rate for two consecutive censuses (Chart 3.3).

### 3.1.4.3 Literacy Rates for Heads of Households

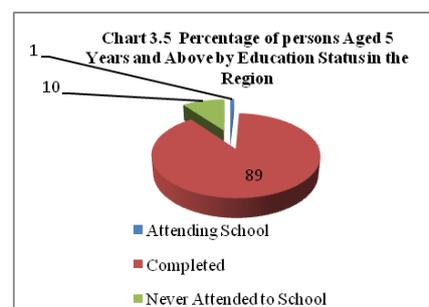

The literacy rate for the heads of households in the region was 100 percent. The literacy rate for the male heads was 83% and that of female heads of households was 17%. The district with the highest literacy rate amongst heads of households was Rombo (87% males, 13% females) followed by Moshi Rural (85% males, 15% females), ).Both Same and Hai recorded moderate literate rates of (80% Males and 20% females).

Literacy rate of male heads was higher than that of female heads in all the districts. The trend also shows that Rombo recorded the highest literacy rate for male heads, and the lowest literacy rate for female heads whereas the district leading in literacy rate among female household heads was Mwanga by 27 % followed by Same and Hai which had 20 percent each. The rest of the districts recorded literacy rate of below 20 % among female household heads (Chart 3.4).

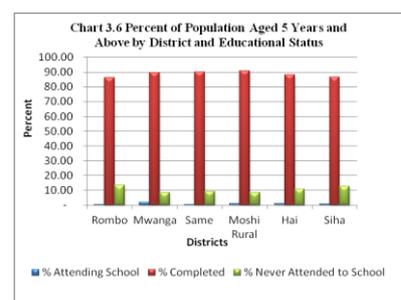

### 3.1.4.4 Educational Status

Information on educational status was collected from members of agricultural households, targeting three categories of people, those attending school, those completed school, and those who never attended school. The results show that 89 percent of the population aged 5 years and above in agricultural households in the region had completed different levels of education, and 1 percent was still attending school, and 10 percent had never attended school (Chart 3.5).

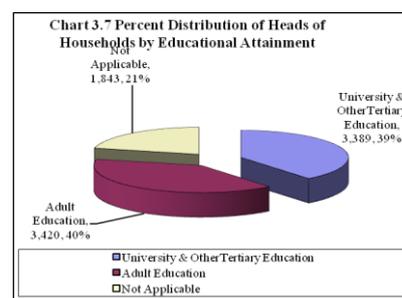

Male and Female Total Agricultural households in Moshi Rural recorded the highest percentage (90.6%) of the population aged 5 years and above who had completed different levels of education. This was followed by Same (90%) and Mwanga (89.6%). Hai recorded the fourth highest percentage (88 %) followed by Siha (87%) and Rombo (86 %) of the population aged 5 years and above who had completed different levels of education.

The number of heads of agricultural households with formal education in region was 6,809 , those with University and other tertiary education were 3,389 and those with only adult education were 3,420.

With regard to the heads of agricultural households with University and other tertiary education in region, Moshi Rural district had the highest percentage (62%). This was followed by Rombo (19%), Hai (13%), and Mwanga and Same with 3 percent each. Heads of agricultural households with university and other tertiary education were not recorded in Siha District. The highest

percentage of heads of households with adult education only was recorded in Rombo District at 41.1 percent, followed by Same District (26 %). Siha and Hai had the third highest percentage of heads of agricultural households with adult education only with 13 percent each. Mwanga had the lowest percentage of heads of agricultural households in this education category at only 1.5, followed by Moshi Rural District at 6.2 percent (Chart 3.7, Table 3.3).

**Table 3.3 Number and Percentage Distribution of Heads of Households by Educational Attainment and by District, 2007/08 Agricultural Year**

District	Education Level							
	University & Other Tertiary Education		Adult Education		Not applicable		Total	
	Number	%	Number	%	Number	%	Number	%
Rombo	649	19	1,405	41	108	6	95,449	100
Mwanga	103	3	52	2	0	0	43,225	100
Same	88	3	880	26	528	29	77,990	100
Moshi Rural	2,115	62	212	6	1,058	57	198,611	100
Hai	434	13	434	13	87	5	77,425	100
Siha	0	0	438	13	63	3	45,082	100
Total	3,389	100	3,420	100	1,843	100	537,782	100

### 3.1.5 Off-farm Income

Agricultural households in the region obtained income from other sources such as business, wages and salaries, cash remittances, and other casual cash earnings. The number of households which obtained cash income from casual cash earnings were 28,014 (11.5 %), wages and salaries in cash 19,921 (8.2%), business income 17,050 (7.0 %) and cash remittances 8,486 (3.5%).

### 3.2 Land Use

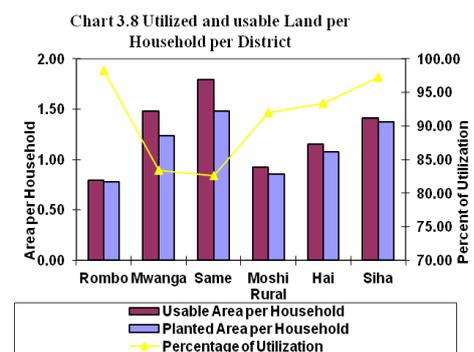

Land area and planted area are different types of area measurements. Land area refers to the physical area of land and is the same regardless of the number of crops planted on it in one year. Planted area is the total of all areas planted with crops in a year and the areas are summed if there were more than one crop on the same year. A number of terms are used in this section which requires definitions for clarification as follows:

Land available refers to the area of land that had been allocated to smallholders through customary law, official title or other forms of ownership. Land available does NOT mean the total area of land that is designated as agricultural land in the country; Instead it is the land that is available to smallholders given the location of villages and lack of access to more remote parcels of unused ? through designated of agricultural land.

Usable land refers to the available land minus the land that cannot be used e.g. bare rock, shallow soils, steep slopes, swamp areas etc. It does however, include un-cleared bush. Utilised land refers to the land that was used during the year.

#### 3.2.1 Area of Land Utilised

The total area of land available to smallholders was 238,142 ha, out of which 217,069 ha were used. At Regional level the average land area utilised for agriculture was only 1.0 ha per household. This figure is below the national average which was estimated at 2.0 hectares. The utilization of the land available to smallholders in region was 91.2 percent. There were slight differences in land utilization per household

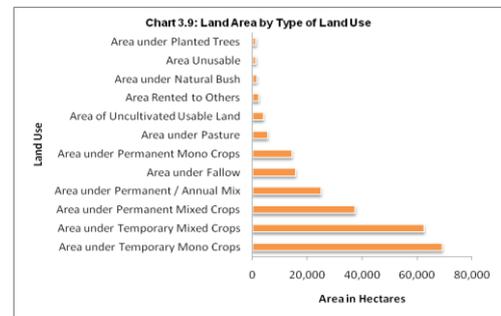

across districts with Same district utilizing 1.8 ha per household, and Mwanga utilizing 1.5 ha per household. Rombo recorded the smallest land area utilised per household (0.8 ha), followed by Moshi Rural. The percentage utilized of the usable land per household was highest in Rombo (98.3%), followed by Siha (97.2 %) and lowest in Same and Mwanga where 82.6 and 83.4 percents respectively of the total land available to smallholders were utilized (Chart 3.8 and 3.7).

### 3.2.2 Types of Land Use

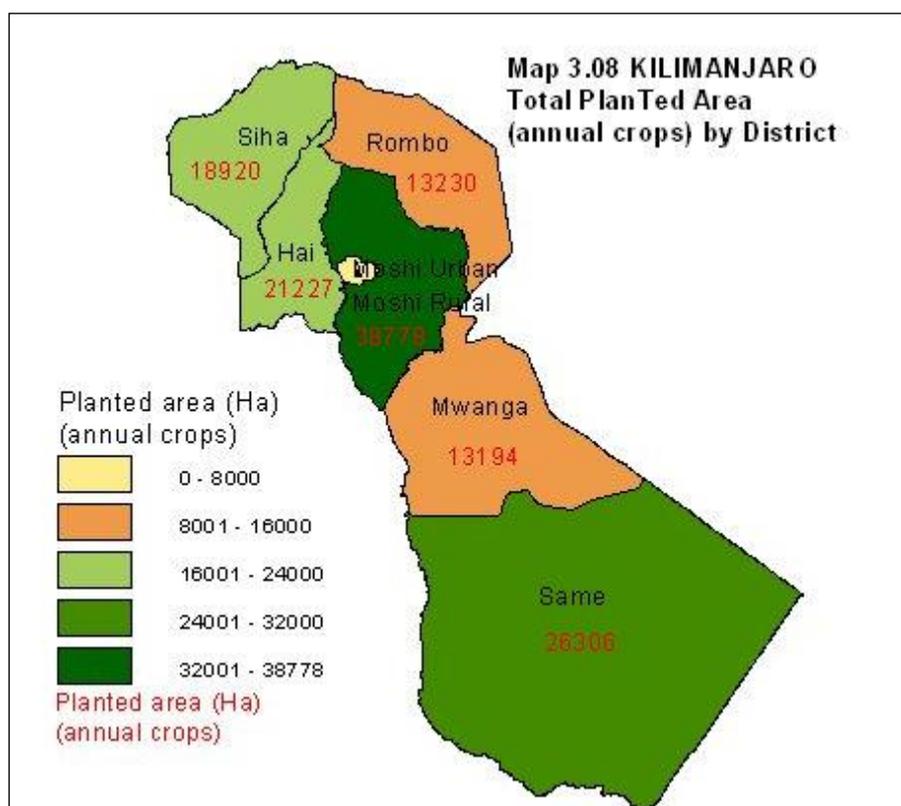

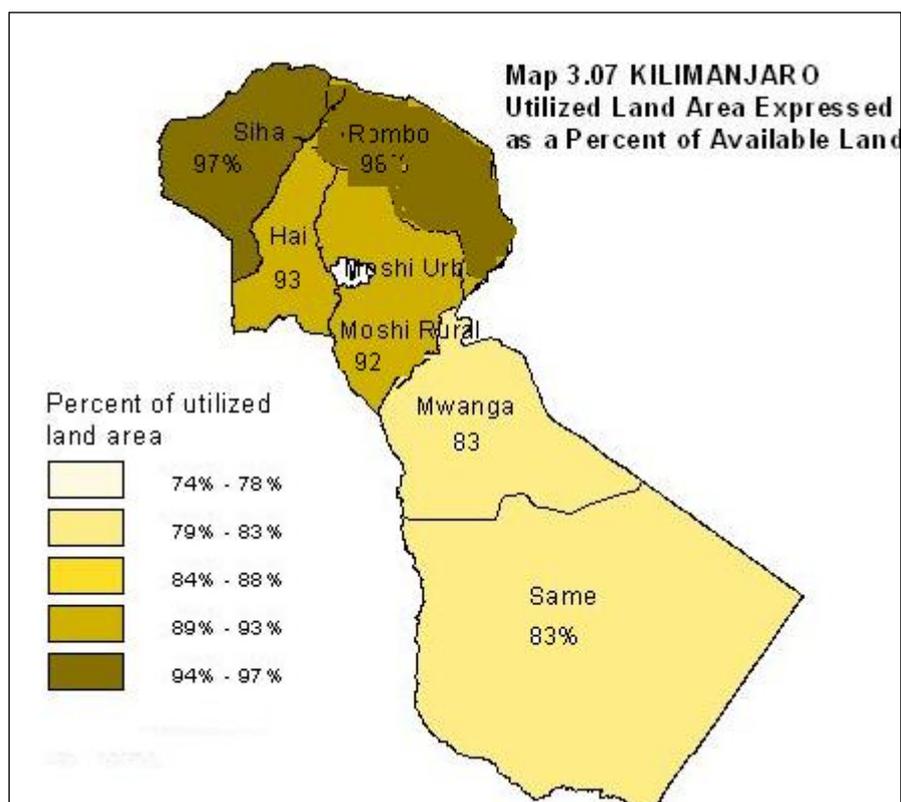

The area of land under temporary mixed crops was 69,157 hectares (28.9% of the total land available to smallholders in ), followed by area under temporary mixed crops (62,497ha, 26.1%). The land area utilized for permanent mixed crops was 37,403 ha, (15.6%), followed by area under permanent/ annual mixed crops (24,860 ha, 10.4%). Area under fallow was 15,687ha (6.6 %), followed by area under Permanent Mono Crops which was 14,300 ha, that is 6 percent. Area under pasture was 5,464 ha (2.3 %).

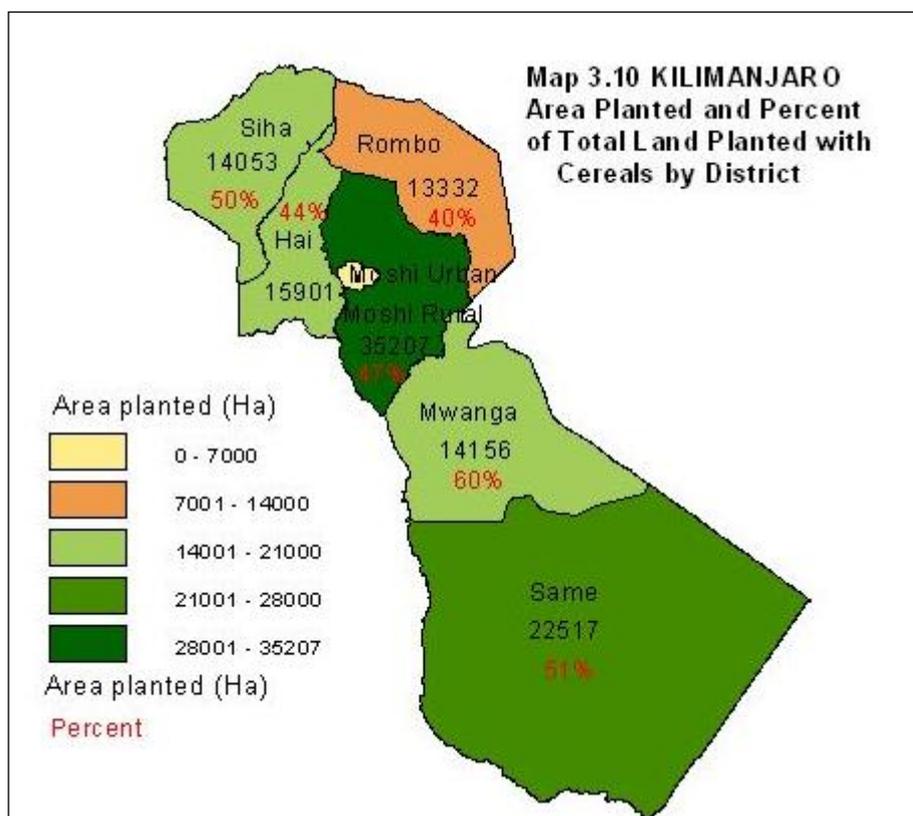

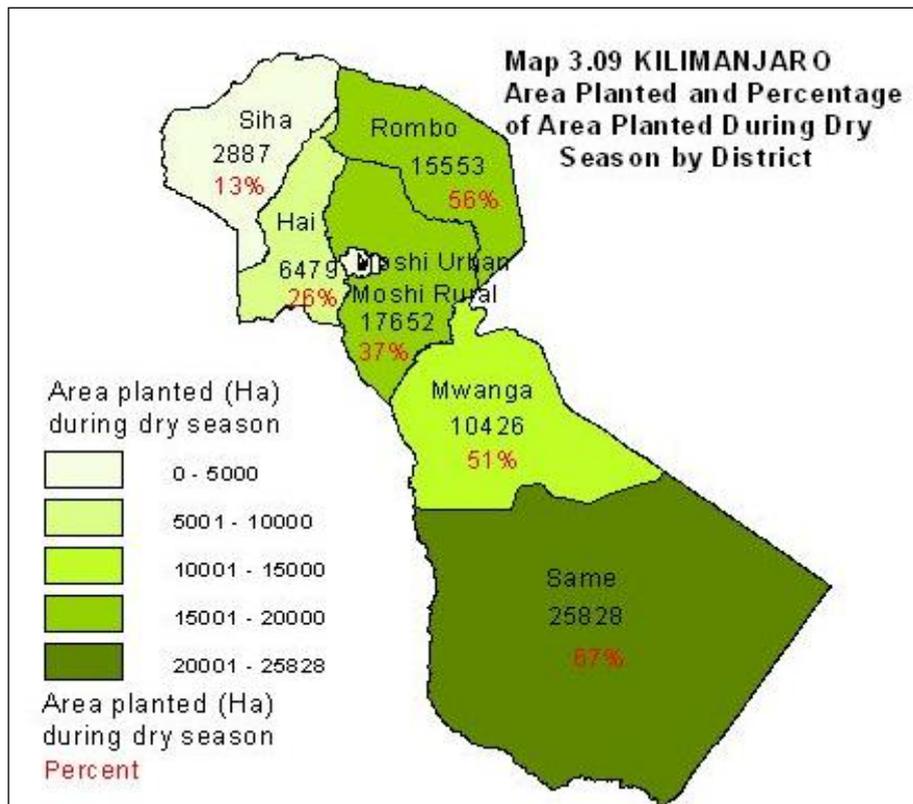

The usable uncultivated land area amounted to 3,921 ha (1.6%), followed by the land area rented to other (2,182 ha, 1%). The land area under Natural Bush was 1,466 ha (0.6%), followed by unusable land 1,207 ha (0.5%), followed finally by the land area under planted trees (1206 ha, 0.5%) (Chart 3.9)

### 3.3 Annual Crops and Vegetable Production

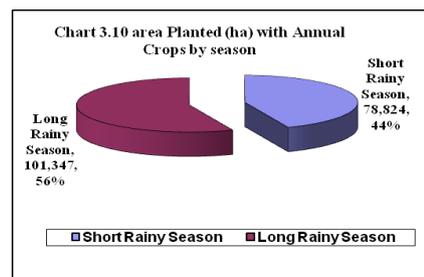

region has two rainy seasons, which are the short rainy season (October to December) and the long rainy season (March to May). The quantity of crops produced in both seasons will be used as a base for comparison with the past surveys and censuses.

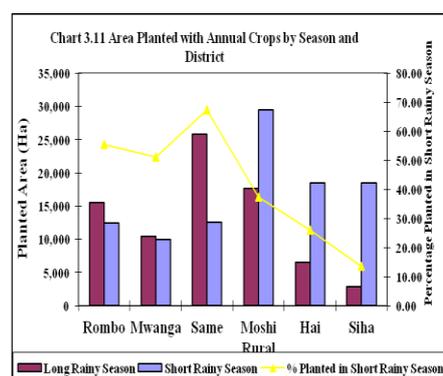

### 3.3.1 Area Planted

The area planted with annual crops and vegetables was 180,171 hectares out of which 101,347 hectares (56%) were planted during long rainy season and 78,824 hectares (44%) were planted during short rainy season. The average areas planted per household during the long and short rainy seasons were 0.6 ha and 0.7 ha respectively (Chart 3.10).

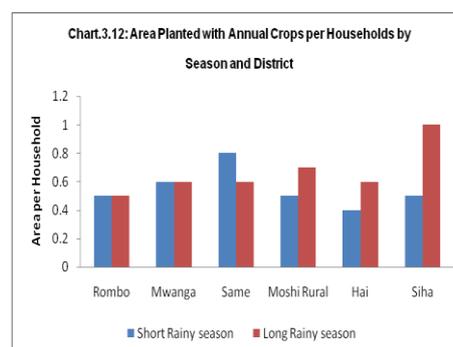

The district with the largest area planted for the two seasons was Moshi Rural (47,098 Ha) followed by Same (38,362) and the smallest area planted was in Mwanga district (20,377 ha).

The percentage area planted during short rainy season was highest in Same district (33%), followed by Moshi Rural (22%), Rombo (20%), Mwanga (13%), Hai (8%), and Siha (4). Moshi Rural had the largest percentage planted area during long rainy (29.1%) followed by Hai and Siha with 18 percent each. Rombo and Same both had the third largest percentage planted area during long rainy season with an area of 12% of planted area each. Mwanga had the smallest percentage planted area of only 10 percent (Chart 3.11 and 3.08)

The average area planted per household during the long rainy season in region was 0.7 hectares, however, there were small district variations. Siha had the largest planted area per household (1.0 ha) followed by Moshi Rural (0.7 ha), Mwanga, Same, and Hai Districts had the third largest average area planted per households of 0.6 percent each. Rombo had the smallest average area planted per household of only 0.5 ha. (Chart 3.12).

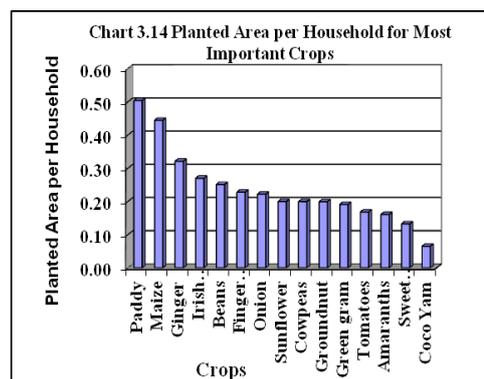

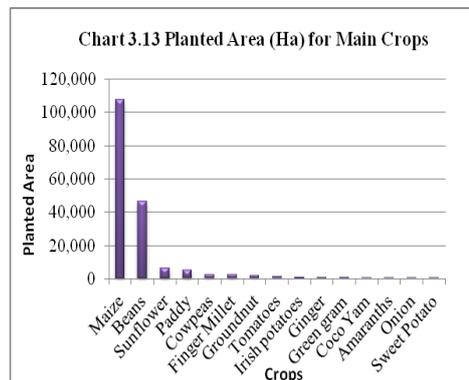

### Analysis of most important crops

The analysis of the Most Important Crops Results on crop production is presented in two different sections. The first section compares the importance of all crops regardless of whether they are

annual or permanent. The second section contains a more detailed analysis on production based on crop types.

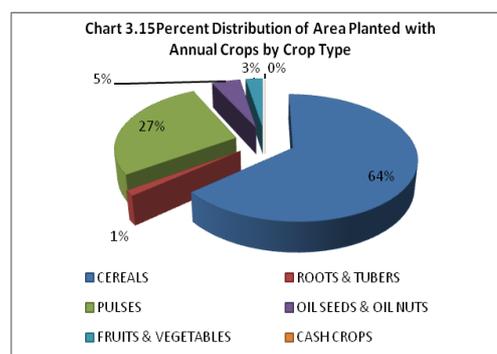

### 3.3.2 Crop Importance

In terms of crop importance maize was the most dominant annual crop grown in region with a planted area of 107,931 hectares, followed by beans which had the second largest planted area of 46,298 ha, and sunflower which had the third largest planted area of 6,521 ha. Other crops grown in (Paddy, Cowpeas, Finger Millet, Groundnut, Tomatoes, Irish potatoes, Ginger, Green gram, Coco Yam, Amaranths, Onion, and Sweet Potatoes, in their order of importance) had the planted area of less than 6,000 ha with sweet potatoes having the least planted area of 483 ha (Chart 3.13). Of the area planted with annuals, maize constitutes 61 percent. Other crops in order of their importance (based on area planted) were beans (26.1%), sunflower (4%), paddy (3%), Cow peas (1.3%), finger millet (1.2). Other crops with small percentages with their order of importance include groundnuts, tomatoes, Irish potatoe, Ginger, Onions, cocoyams, amaranthus, and sweet potatoes (Chart 3.14).

### 3.3.3 Crop Types

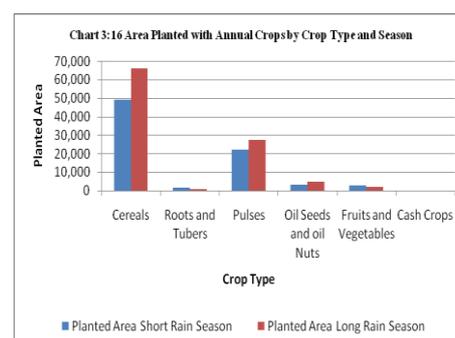

In terms of planted area of selected crops per household, cereal types of crops such as paddy and maize had the largest planted area per household as opposed to other crops grown in . Ginger had the third highest planted area per households growing that crop. On the other hand roots and tubers (e.g. coco yams and sweet potatoes) had the lowest planted area per households followed by horticultural (vegetable types of e.g. tomatoes and amaranthus) crops (Chart 3.15).

Cereals and roots and tubers are the dominant crops grown in in terms of planted s area and other crop types are of minor importance. The area planted with cereals was 115,167 ha (64% of the total

planted area), followed by pulse with 49,521 ha (27.5%), oil seeds & oil nuts 8,124 ha (4.5%), fruits and vegetables 4,847 ha (3 %), and roots and tubers 2,483 (1.4%). Cash crops are normally permanent crops and are not totally reflected in Chart 3.15 and 3.16).

There were variations in the proportions of the crop types grown between seasons in terms of planted area. Long rainy season production was higher compared to that of the short rainy season and it is therefore inappropriate to make detailed comparison between the two seasons. Cereals, pulses and Oil Seeds and Nuts are the dominant crops grown in both seasons. Other crop types are of minor importance in comparison (Chart 3.16)

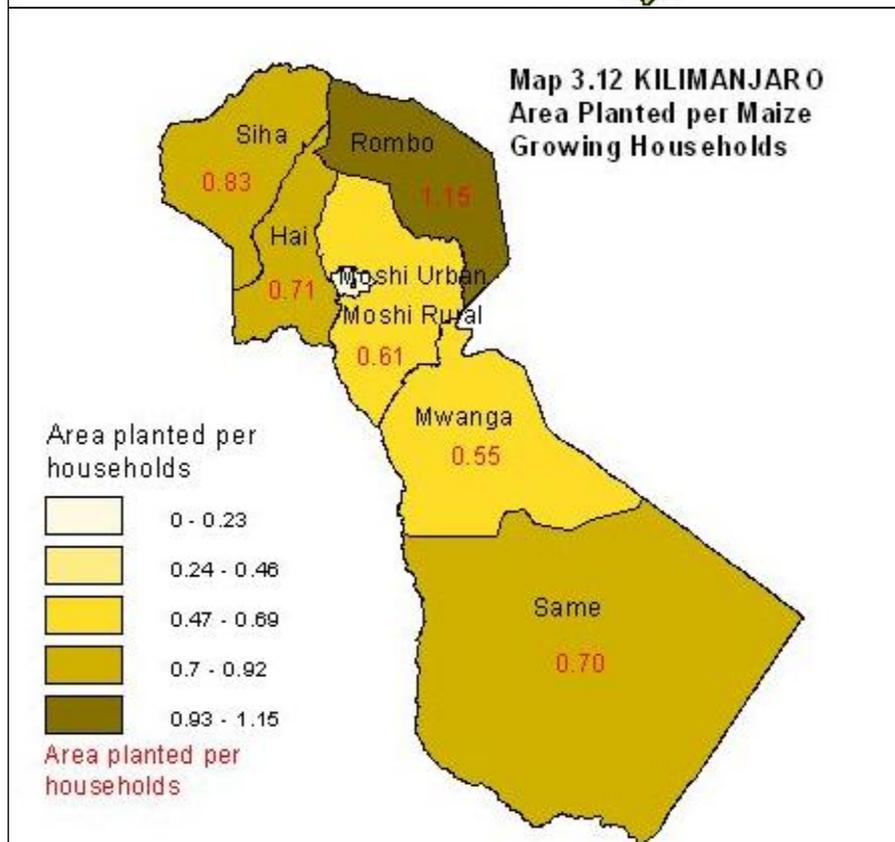

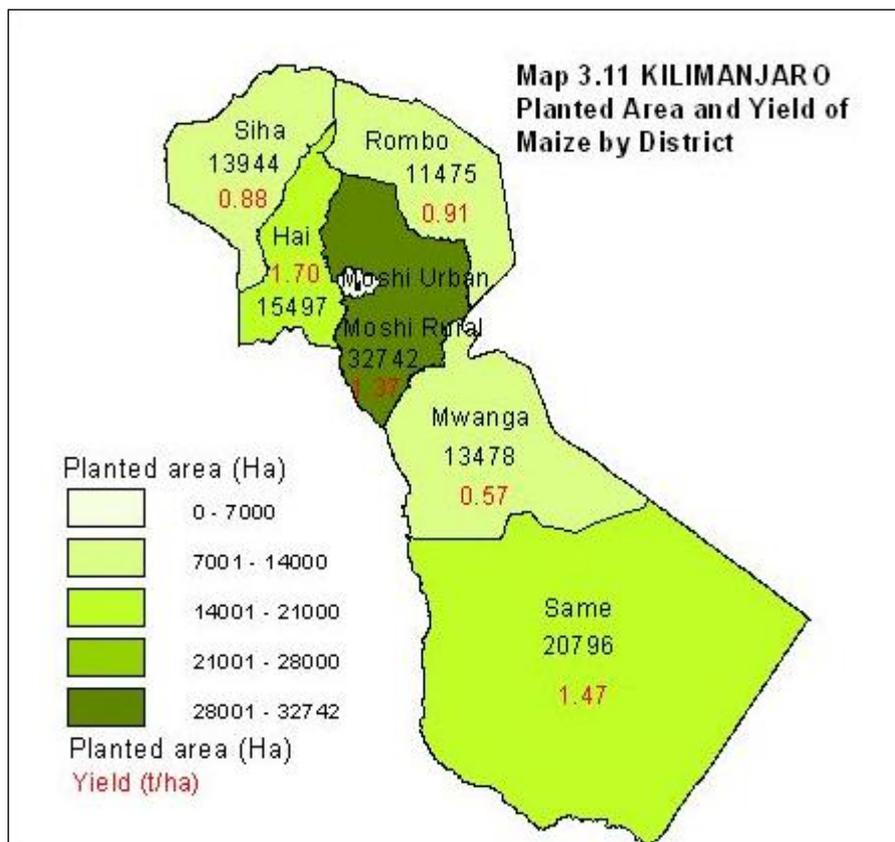

### 3.3.4 Cereal Crop Production

The total production of crops was such that cereal crops were leading with 159,437 tonnes, which is 73 percent other crops accounting to the remaining 27 percent of the total crops grown in . Among cereal crops Maize was widely produced at 150,138 tonnes which was 94 percent of the total cereal crops produced, followed by paddy ( 6,831 tonnes, 6%) sorghum 46 tonnes ( 0.03%), finger millet 422 (0.26%) (Table 3.4, 3.10).

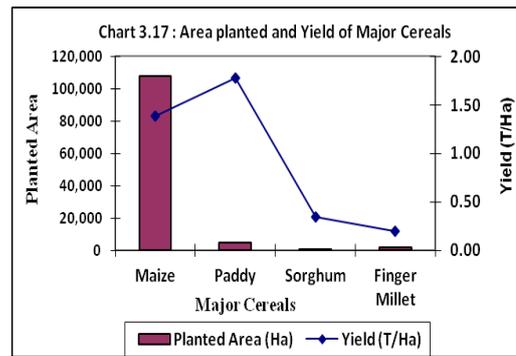

The total area planted with cereals was 115,167 ha out of which 49,181 ha (43%) were planted in short rainy season and 65,956 ha (57%) were planted during the long rainy season. The long rainy season accounted for 63 percent of the total cereals produced in both seasons. The area planted with maize during the long rainy season was 12.3% of the total area planted with cereals in that season followed by finger millet (3.4%). There was no record of the percentage area planted with paddy and sorghum by season (Table 3.4).

**Table 3.4 Area, Production and Yield of Cereal Crops by Season**

Crop	Short Rainy Season			Long Rainy Season			Short & Long Rainy Season		
	Area Planted (Ha)	Amount Harvested (T)	Yield (T/Ha)	Area Planted (Ha)	Amount Harvested (T)	Yield (T/Ha)	Area Planted (Ha)	Amount Harvested (T)	Yield (T/Ha)
Maize	44,517	51,920	1	63,414	98,219	2	107,931	150,138	1
Paddy	4,183	7,175	2	783	1,655	2	4,966	8,831	2
Sorghum	46	9	0	86	37	0	132	46	0
Finger Millet	435	125	0	1,702	298	0	2,137	422	0
CEREALS	49,181	59,229	1	65,986	100,208	2	115,167	159,437	1

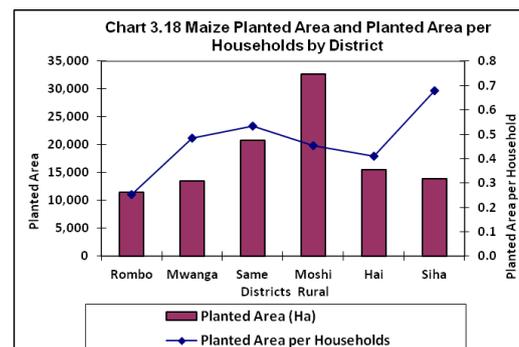

The yield for paddy was 1.9 Tonnes/ha, followed by maize (1.4 T/ha), sorghum (0.4 T/ha), finger millet (0.2 T/ha) (Table 3.4, Chart 3.17).

### 3.3.4.1 Maize

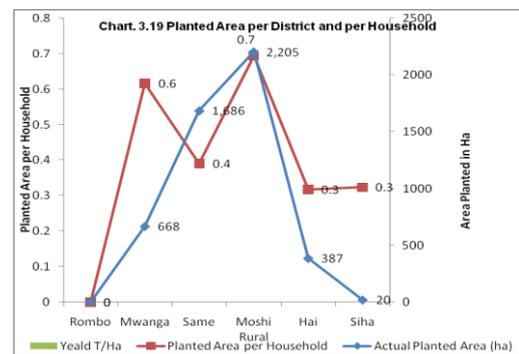

Maize dominated the production of cereal crops in the region with Moshi Rural having the largest area of Maize (32,742 ha, 30.3%), followed by Same (20,796 ha, 19.3%), Hai (15,497ha, 14.4%), Siha (13,944 ha, 13%), Mwanga (13,478ha, 12.5%), and Rombo (11,475 ha, 11 %).

The average area planted with maize per household was 0.4 hectares; Maize production increased from 105 tonnes in 2002/2003 to 150, 138 tonnes in 2007/2008. The productivity of maize increased over the period of five years from 1.1 t/ha in 2002/03 to 1.5t/ha in 2007/08. On the other hand the area planted with maize increased over the 5 year period from 96,593 hectares in 2002/03 to 107,931 hectares in 2007/08 (s, 3.11, 12).

### 3.3.4.2 Paddy

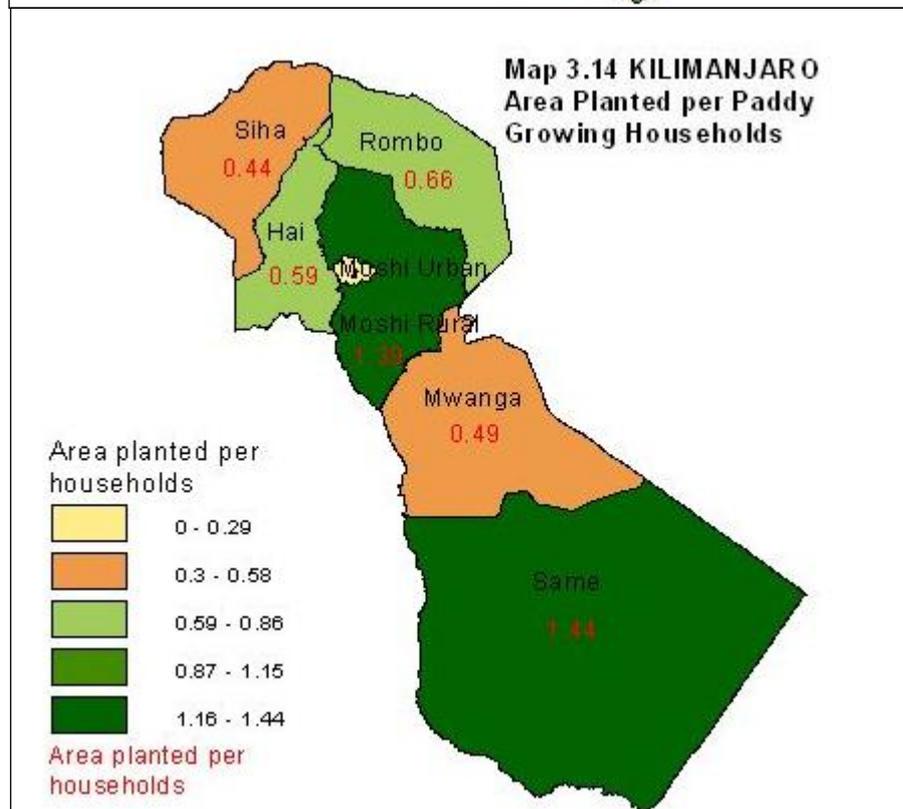

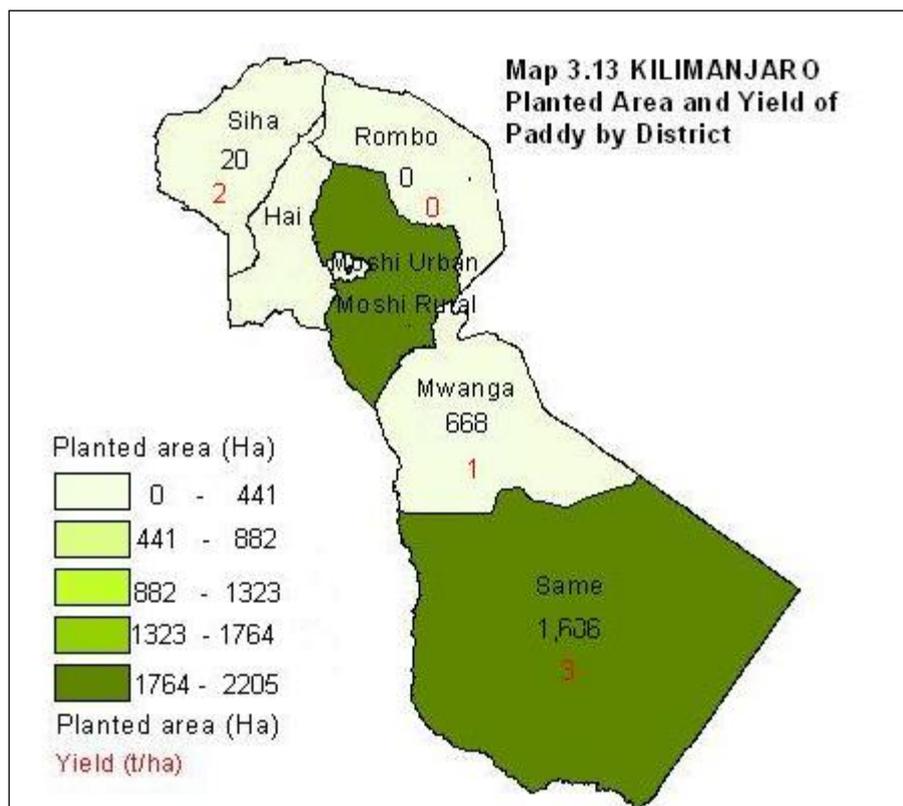

Paddy was the second important cereal produced in the region. A total of 7,622 households cultivated 4,966 hectares which produced 8,831 tonnes of the crop. Same was leading in production with 4,239 tonnes planted on 1,686 ha, followed by Moshi Rural which produced a total of 2,678 tonnes (2,205 ha) (Chart. 3.19 3.13). Paddy was not reported in Rombo district. The average area planted with paddy per household was 0.5 hectares. However there were small variations across district, Mwanga and Moshi Rural having the largest area planted per household (0.8 ha (Chart 3.19).

The yield of paddy increased further over the period of five years from 1.2t/ha in 2002/03 to 2 t/ha in 2007/08. On the other hand the area planted with paddy increased over the period of five years 3,029 ha in 2002/03 to 4,966ha in 2007/08 (Table 3.5, s, 13,14).

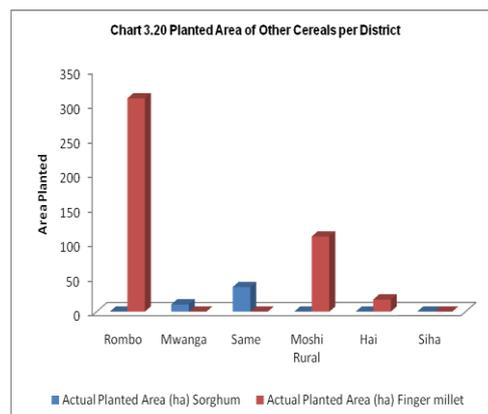

**Table 3.5 Area Planted, Planted Area per Household and Yield of Paddy by District**

District	Actual Planted Area (ha)	Number of Household	Planted Area per Household	Yeald T/Ha	Harvest Tonnes
Rombo	0	0	0	0	0
Mwanga	668	1,083	0.6	1	689
Same	1,686	4,313	0.4	3	4,239
Moshi Rural	2,205	3,173	0.7	1	2,678
Hai	387	1,215	0.3	3	1,194
Siha	20	63	0.3	2	31
Total	4,966	9,847	0.5	2	8,831

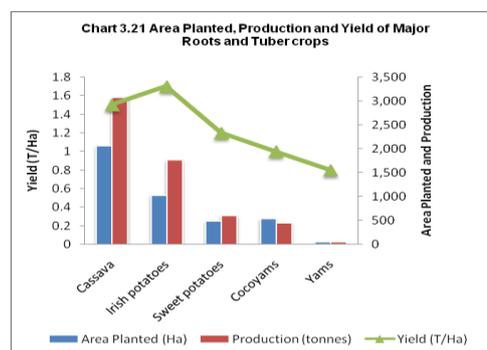

### 3.3.4.3 Other Cereals

In terms of area planted with other cereals (sorghum and finger millet), Rombo (1856 ha) , Moshi Rural (260 ha), Siha (89ha) and Same (36 ha) and Mwanga had the smallest area planted of 10 ha.. The planted area per household for other cereals was recorded low for all districts with 0.4 ha/household in Same, 0.2 ha/household in Mwanga for sorghum, 0.26 ha/household in Moshi Rural, 0.2 ha/household in Hai for finger millet. In terms of yield, Moshi Rural was leading by 0.5t/ha for finger millet while Mwanga was leading by 0.5t/ha for sorghum.

### 3.3.5 Roots and Tuber Crops Production

The total production of roots and tubers was 5,952 tons with the production of cassava being the highest in the region at 3,083 tons representing 52 percent of the total root and tuber crops production. The second highest was Irish potatoes with 1,766 tons (30%), followed by sweet potatoes 601 tonnes (10%) and cocoyam (453 tons 8%).

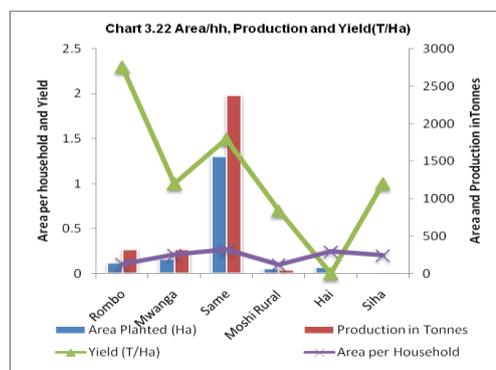

The remaining other crops contribute less than 5% of the total root and tuber crops production. The estimated yield was highest for Irish potatoes and cassava (2ton/ha) followed by sweet potatoes (1.2ton/ha), Yams (1ton/ha), and the remaining crops contributing less than 1 ton per hectare. Cassava had the largest planted (2,064 ha) area among tuber crops grown in region. The other crops with large planted area in the order of importance include Irish potato, cocoyams, Sweet potatoes, and lastly Yams (Chart 3.21)

#### 3.3.5.1 Cassava

The number of households growing cassava in the region was 9,168. Cassava production ranked the first with a total planted area of 2,064 hectares that produced 3,083 tonnes, resulting in a yield of 1.5 t/ha. This production was 52% of the total roots and tuber production in the region.

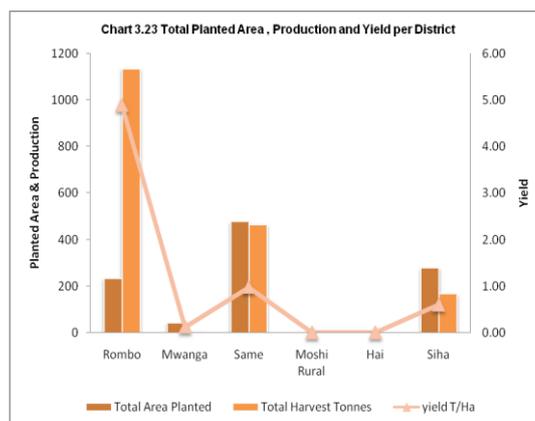

Same had the largest planted area of cassava (1,566 Ha, 76%) of the total planted area under roots and tuber in the region), followed by Mwanga (196 Ha, 9%), Rombo (141 ha, 7%) and Siha had the

least area planted with cassava (12.66 ha). The average cassava planted area per cassava growing household was 0.2 hectares. However, there were small variations across the districts. The area planted cassava growing household was largest in Same (0.3 ha/household), Hai (0.24 ha/household) and Mwanga (0.24 ha/household), (Chart 3.22).

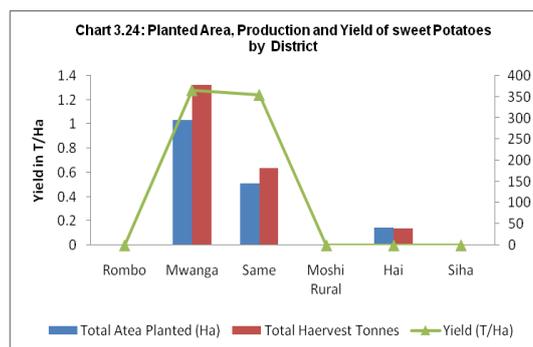

### 3.3.5.2 Irish Potatoes

The number of agricultural households growing Irish potatoes in region was 3,802. This was 32% of the total root and tuber crop growing households during both seasons. The total production of Irish potatoes during the census year was 1,766 tonnes from a planted area of 1,028 hectares resulting in a yield of 1.7t/ha. Same district had the largest planted area for Irish potatoes (475 ha, 46.3%), followed by Siha (278 ha, 27.1%), Rombo (232 ha, 23%) and Mwanga (42 ha, 4.1%). Moshi Rural and Hai were not reported in this category (Chart 3.23)

### 3.3.5.3 Sweet Potatoes

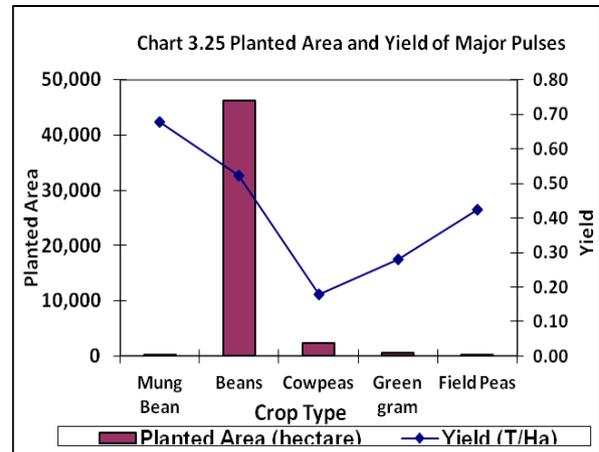

The number of households growing Sweet potatoes in region was 3,644 during the survey period.. The total production of Sweet potatoes during the census year was 601 tons from a planted area of 483 hectares resulting in a yield of 1.0t/ha. Mwanga District had the largest planted area for Sweet potatoes (295 ha, 61%), followed by Same (146 ha, 30%), Hai, (42ha, 9%) Rombo and Moshi Rural there were no on Sweet potatoes planted area and Production (Chart 3.24)

### 3.3.6 Pulse Crops Production

The total area planted with pulses was 49,521 hectares out of which 46,298 ha were planted with beans (93.5 percent of the total area planted with pulses), other pulse crops were of minor importance in terms of area planted,

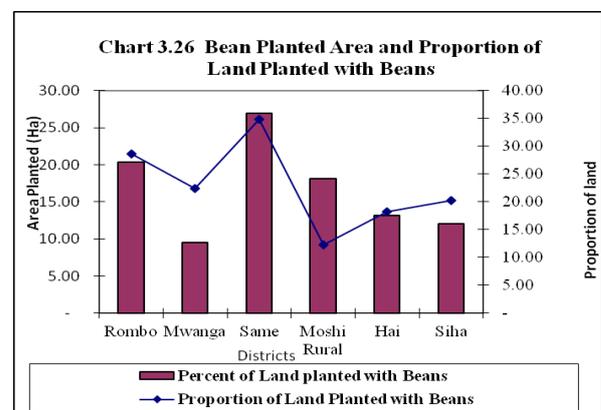

The area planted with pulses in the long rainy season was 27,480 ha which represented 55 percent of total planted area with pulses during the year. During short rainy season total planted area was 22,041 hectares that produced 9,836 tonnes. The total production of pulses was 24,873 tons, Individual pulse crop production indicates beans as constituting 97 percent of the total pulse production. This was followed by cowpeas (4241 tonnes, 2.0%), green grams (192tonnes, 1%), mung beans (66 tonnes, 0.3%), and field peas 38 tonnes, 0.2 percent (Chart 3.25).

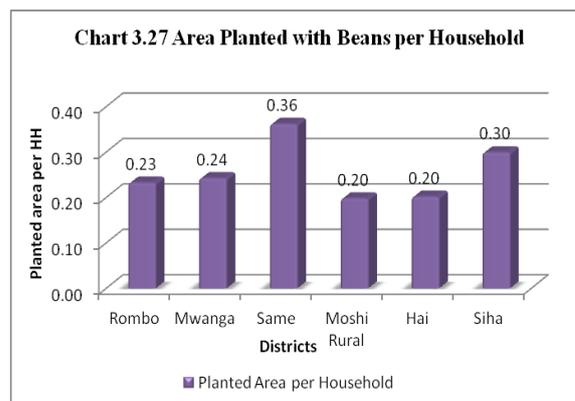

In order of importance bean production was followed by cowpeas 2,354, ha, (5%), green gram 683 ha, (1.4%), mung beans and field peas 98 and 89 hectares respectively, that is 0.2 percent for both.

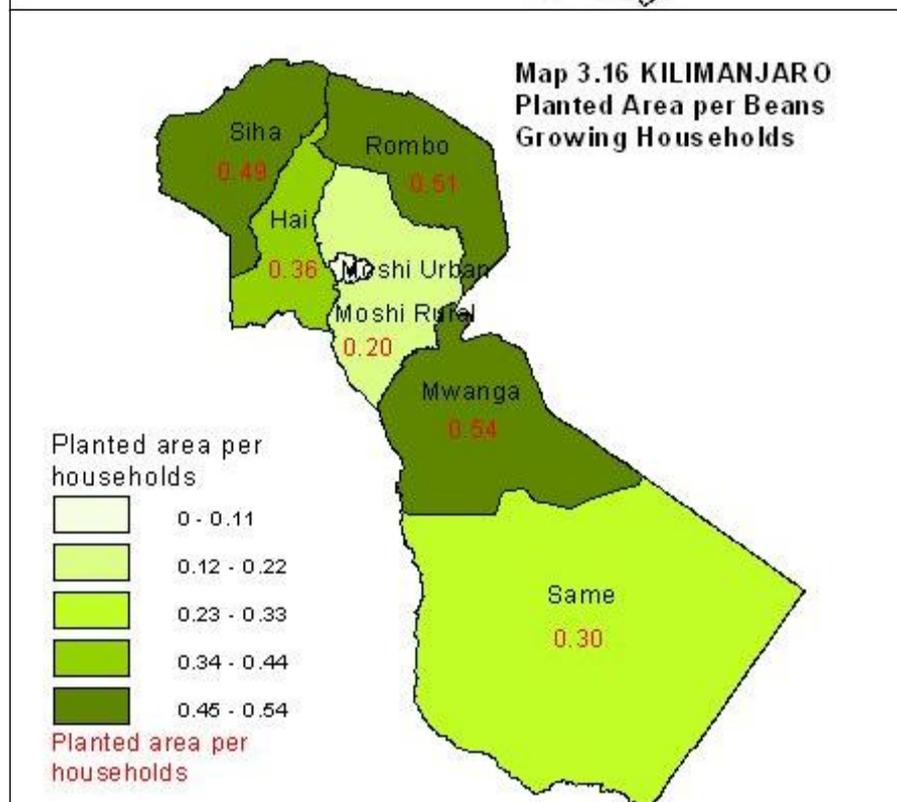

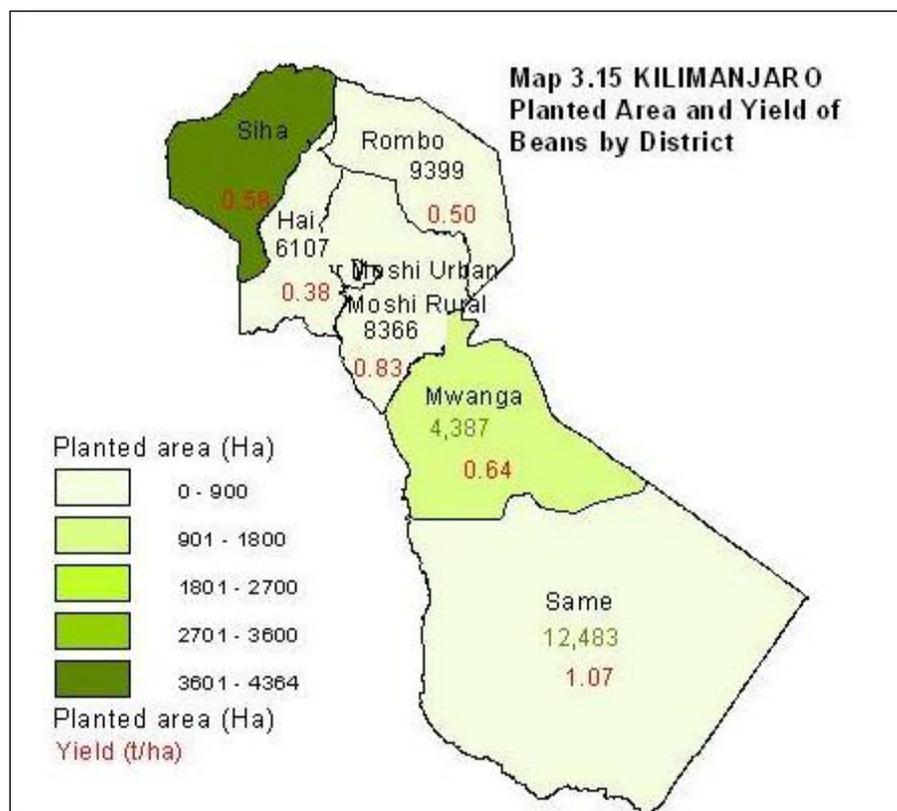

#### 3.3.6.1 Beans

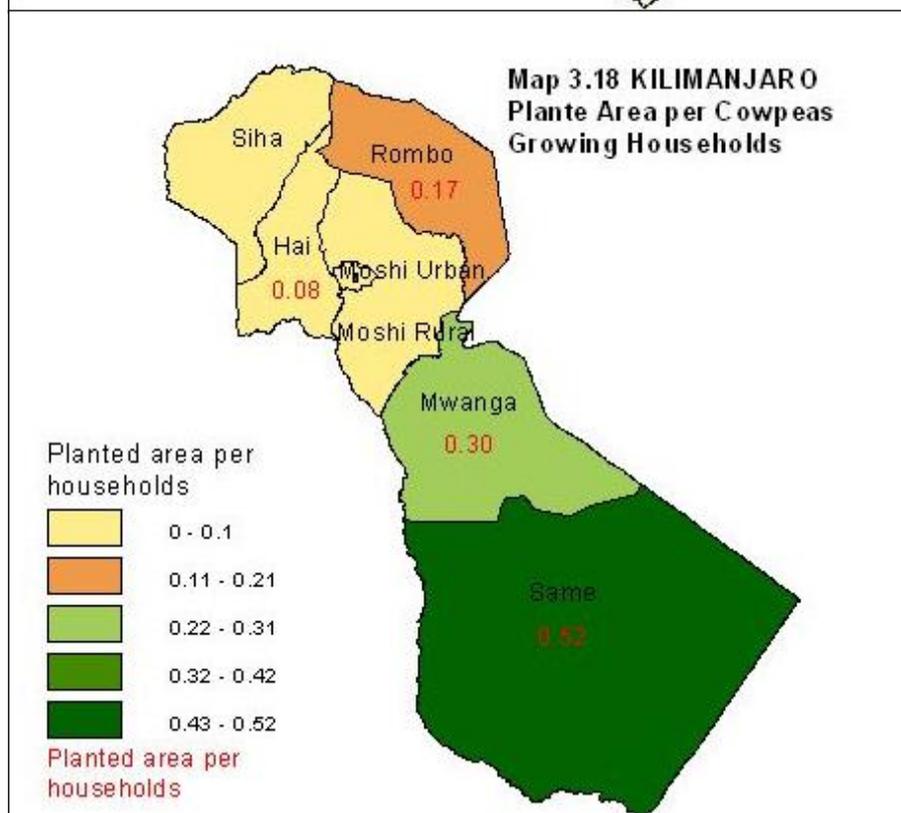

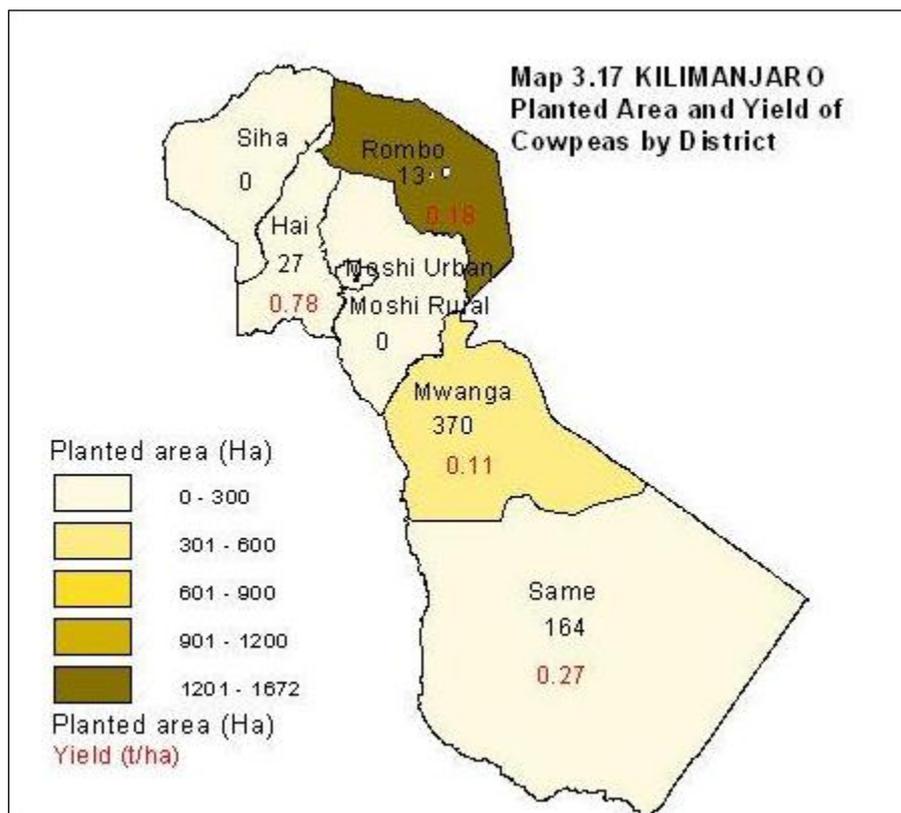

The number of households growing beans in region in both short and long rainy seasons was 184,205 households. The total production of beans in the region was 24,153tons from a planted area of 46,298 hectares resulting in a yield of 0.5t/ha. Same had the largest planted area of 12,483 ha of beans in the region, followed by Rombo with 9,399, and Moshi rural (8,366 ha). Mwanga had the least area planted with beans (4,387 ha) accounting for 9 % of the total area planted with beans, (Chart 3.26, s 3.15, 3.16).

The average area planted per household in the region during the census years was 0.3 ha. There were slight variations in area planted with beans per household across the districts ranging from 0.40 to 0.20 ha, (Chart 3.27 and 3.15, 16). In region, area planted with beans increased steadily over the period of five from 44,284 ha in 2002/03 to 46,298 ha in 2007/08 with an increase of yields from 0.4t/ha in 2002/03 to 0.5t/ha in 2007/08 . Bean production increased from 17,622 tonnes in 2002/2003 to 24,153 tonnes in 2007/2008.

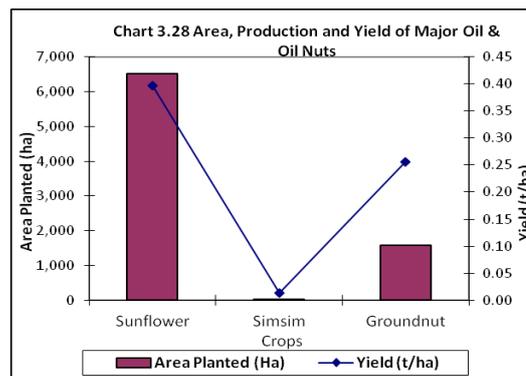

### 3.3.7 Oil Seed Production

The total production of oilseed crops was 2,996 tons planted on an area of 8,124 hectares. The total planted area of oilseeds during the long rainy season was 4,885 ha representing 60% percent of the total area planted with oil seed crops. Sunflower was the most important oilseed crop with 6,521 ha (80 % of the total area planted with oil seeds). Groundnuts was second largest crop under oilseeds grown in occupying 1,587 ha, 19.5%), followed by simsim occupying 15 ha, 0.5 %). The yield for sunflower was 0.4t/ha, and the yield for groundnuts was 0.3t/ha, (Chart 3.28).

#### 3.3.7.1 Groundnuts

Groundnuts production by districts indicates Rombo had the largest groundnuts planted area of 1,179 hectares (74.3 percent of the total area planted with groundnuts in the region) followed by Moshi rural (278 ha, 17.5 %), Same (98 ha, 6.2%), and Mwanga (31ha, 2%). Hai and Siha Districts did not any production of groundnuts (Chart 3.29). The average planted area per groundnut growing household was 0.2 hectares. (Chart 3.29).

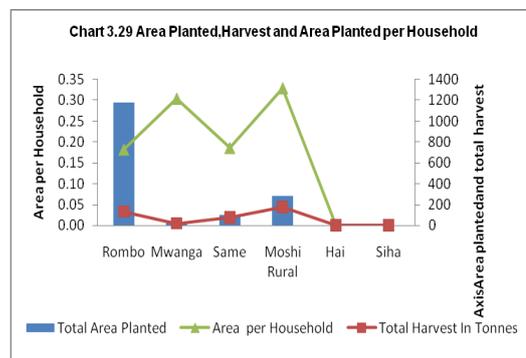

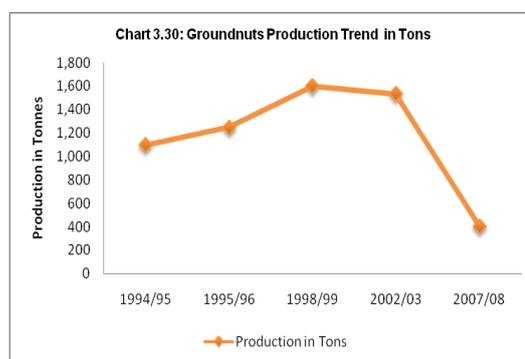

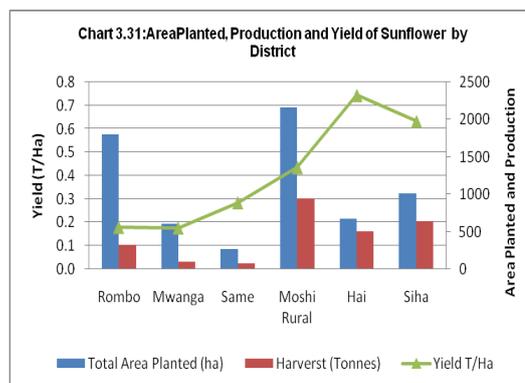

Chart 3.30 gives Groundnuts production trend (in thousand metric tons 1994/95 to 2007/08 agricultural seasons). The production trend of groundnuts over five years shows a slight decrease from 1,600 tons in 1998/99 to 1,536 tons in 2002/03 which was followed by a rapid decrease from 1,536 tons in 2002/03 to 406 tons in 2007/08.

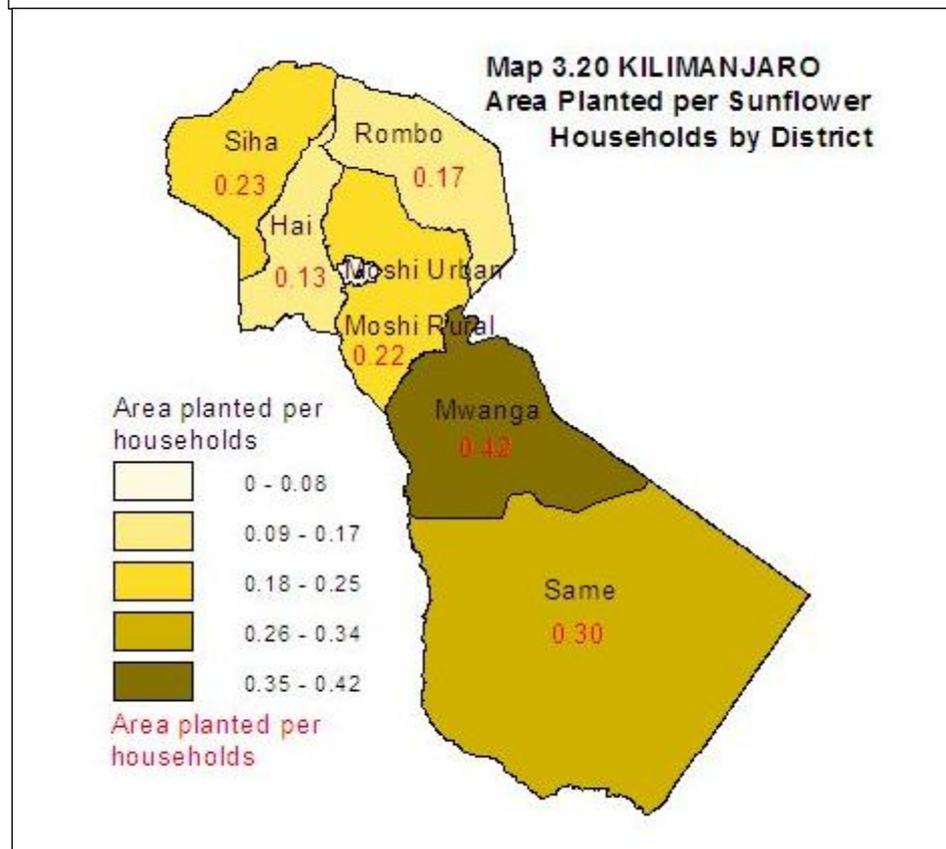

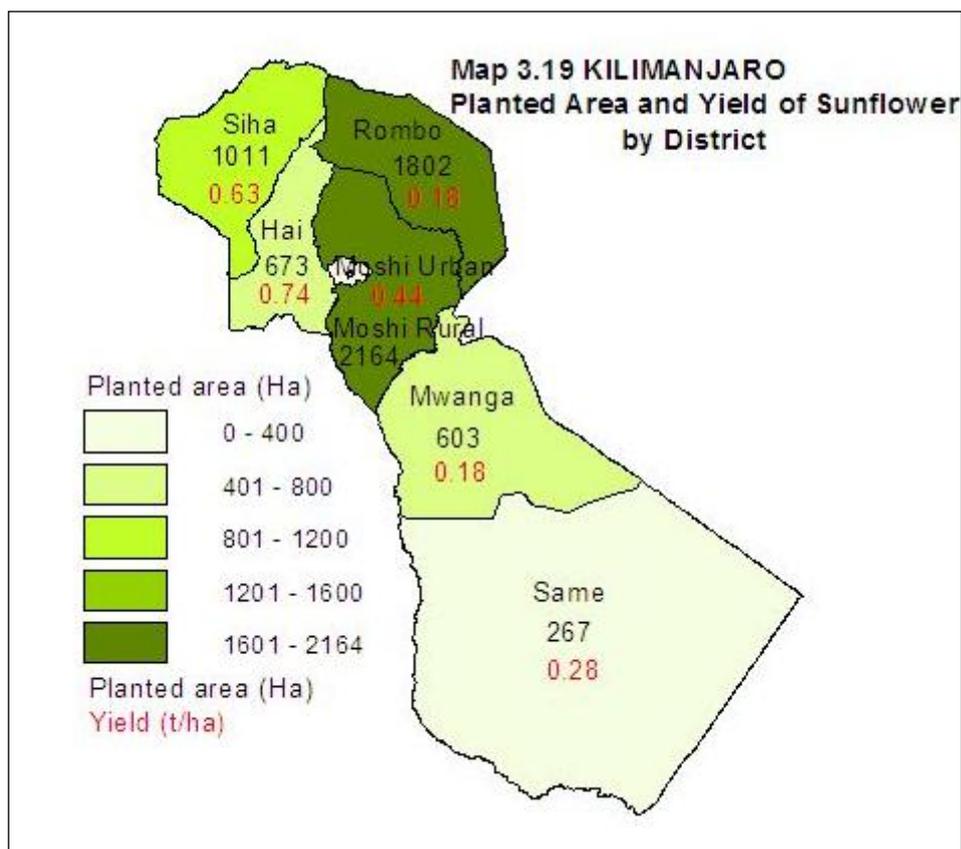

#### 3.3.7.2 Sunflower

Sunflower was the first in importance among oilseed crop grown in the region, with 6,521 ha (80 % of the total area planted with oil seeds). Production constitute about 86% (2,590 tonnes) of the total

sunflower production. The number of household cultivated sunflower were 11,026 and 21,591 during short and long rainy seasons respectively. Moshi Rural had largest area planted (2,164 ha) followed by Rombo (1802 ha) and Siha 1011 ha. In terms of production Moshi Rural was leading with 942 tonnes followed by Siha (639 tonnes), Hai (501ha) and Same had the lowest production level (76 tonnes). (Chart. 3.31, s 19, 20).

Area planted increased sharply from 843 ha in 2002/2003 to 6,521 ha in 2007/2008. However, production of sunflower decreased from 3,724 tonnes in 2002/2003 to 2,590 tonnes in 2007/2008.

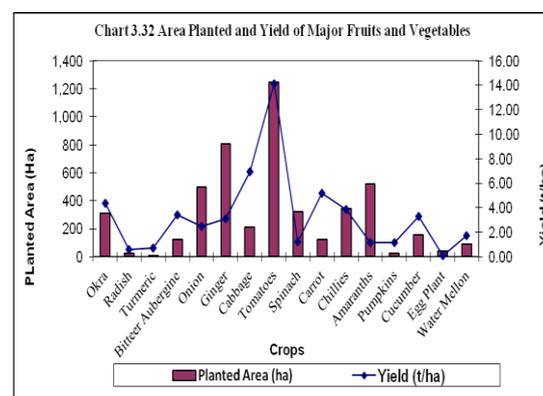

### 3.3.8 Fruits and Vegetables

Most of the data collected on fruits and vegetables were from the production of smallholders farmers. Most fruit production data reported in permanent crops section with exception of water melon which is an annual crop. Reliable historical data for time series analysis of fruits and vegetables are not available, the short rainy season was relatively important for fruits and vegetables production since 56 percent of the total area planted with fruits and vegetables was during the short rainy season.

The total production of fruits and vegetables was 28,215 tons, produced in a total area of 4,847 ha. Among fruits and vegetables, tomato crop was the most widely grown crop with a production of 17,557 tonnes (62.2% of the total fruits and vegetables produced) followed by Ginger (2,488 tonnes, 9%), Cabbage (1,456 tonnes, 5.3%), Okra (1,367 tons, 5%), Chillies (1322 tonnes), Onions (1,231 tonnes, 4.4%) and Carrot (634 tonnes). The production of other fruit and vegetable crops grown in the region was small amounting to less than a thousand tonnes (Table 3.6).

The yields of fruit and vegetable crops was highest for tomatoes (14.1t/ha), cabbage (7 t/ha), Okra (4.4t/ha) and onion (2.48 t/ha), carrot (5.18 t/ha) and cucumber (3.32 t/ha). Ginger, cucumber and Bitter Aubergine, amounted to 3 tons per hectare each. The remaining crops contributed less than 3 tons per hectare (Table 3.6, Chart 3.32).

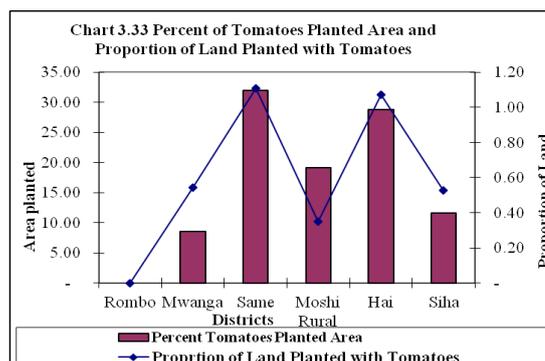

**Table 3.6 Area, Production and Yield of Fruits and Vegetables**

Crop	Number of Household	Planted Area (hectare)	Quantity Harvested (tons)	Percentage	Yield (T/Ha)
Tomatoes	7,393	1,245	17,557	62.2	14.11
Ginger	2,516	809	2,488	8.8	3.08
Cabbage	1,456	213	1,489	5.3	6.98
Okra	1,306	312	1,367	4.8	4.39
Chillies	2,843	345	1,322	4.7	3.84
Onion	2,239	497	1,231	4.4	2.48
Carrot	798	122	634	2.2	5.18
Amaranths	3,226	520	591	2.1	1.14
Cucumber	1,080	158	525	1.9	3.32
Bitter Aubergine	714	124	422	1.5	3.42
Spinach	2,549	322	387	1.4	1.20
Water Mellon	263	89	152	0.5	1.71
Pumpkins	212	21	25	0.1	1.19
Radish	63	25	16	0.1	0.62
Turmeric	63	6	4	0.0	0.69
Egg Plant	260	38	3	0.0	0.09
Total	26,978	4,847	28,215	100.0	5.82

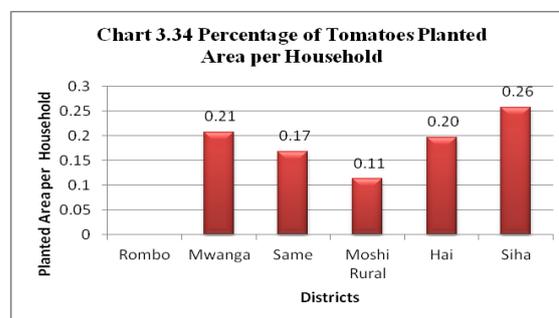

### 3.3.8.1 Tomatoes

The number of households growing tomatoes in the region during the 2007/08 agricultural season was 7,393 for both short and long rainy seasons. This represented 27 percent of the total households growing vegetables in the region during the 2007/08 agricultural season. Tomatoes planted area by districts indicates Same District having the largest area (397 ha, 32% of the total area planted with tomatoes in the region), followed by Hai (358 ha, 29%), Moshi rural (238 ha, 19.1%), Siha (144 ha, 11.6%), and Mwanga (107 ha, 8.6%). Rombo District was not reported as having grown tomatoes during the 2007/08 agricultural season.

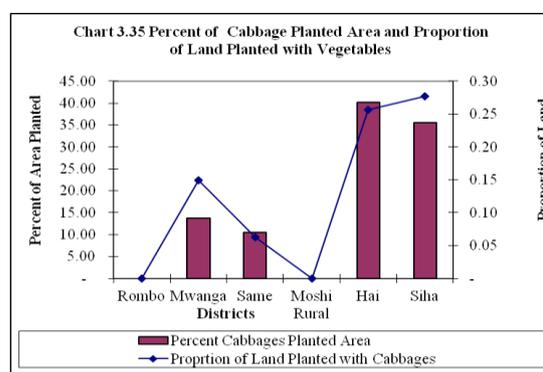

Same and Hai had the highest proportion of land with tomatoes of 0.5 ha for both. The remaining districts had relatively low percentage proportions of less than 1 percent of the land used for tomato production (Chart 3.33, s 3.21, 3.22).

Siha District had the largest planted area per tomato growing household during the 2007/08 agricultural season (0.3 ha/hh), followed by Mwanga, Hai and Same with 0.2 ha per household for each district. Moshi rural had the least planted area per tomato growing household during the 2007/08 agricultural season (0.1 ha/hh) (Chart 3.34, and 3.23). The total area planted with tomatoes accounted for 0.6 percent of the total area planted with annual crops and vegetables during the census year.

### 3.3.8.2 Cabbage

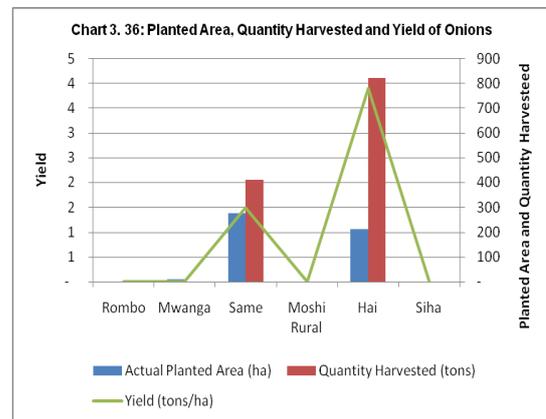

The number of households growing cabbages in the region during the 2007/08 agricultural season was 1,456. This represented 0.1 percent of the total crop growing households during the 2007/08 agricultural season. Hai District had the largest area planted with cabbage (86 ha, 40.2% of the total area planted with cabbage in the region), followed by Siha (76 ha, 35.6%), Mwanga (29 ha, 14%), Same (22 ha, 10.5%). Rombo and Moshi Rural districts were not reported having grown Cabbage during the 2007/08 agricultural census (Chart 3.35) Siha and Hai had the largest proportion of land planted with cabbage during the 2007/08 agricultural census (0.3 ha for both districts). The total

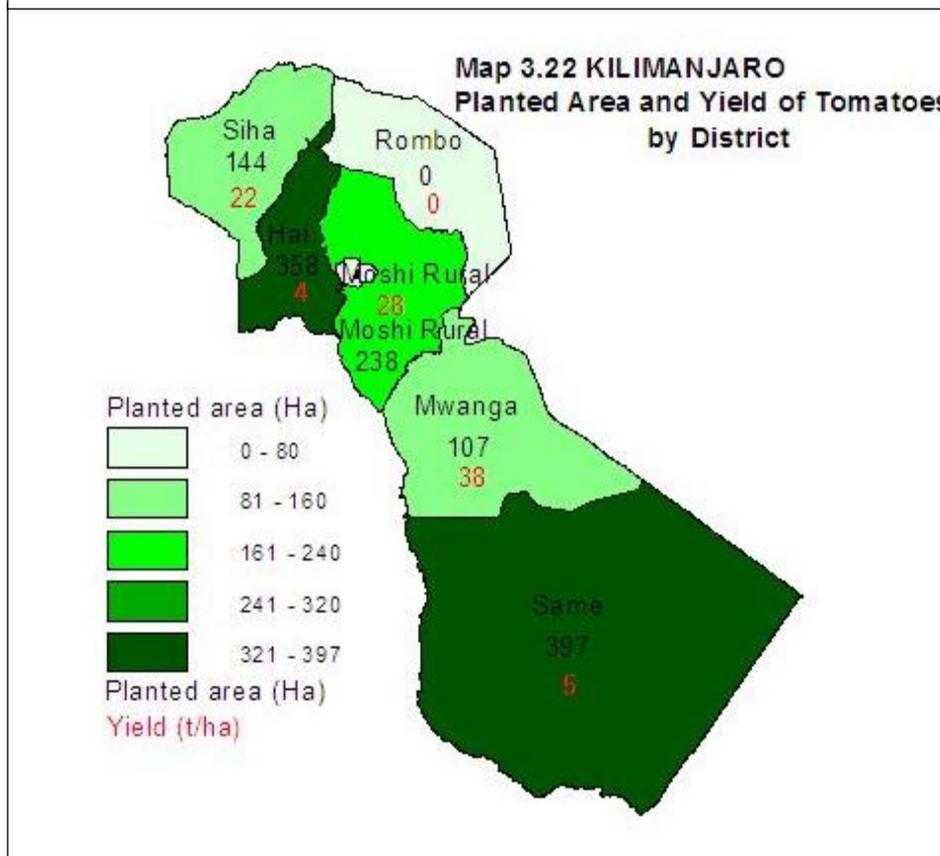

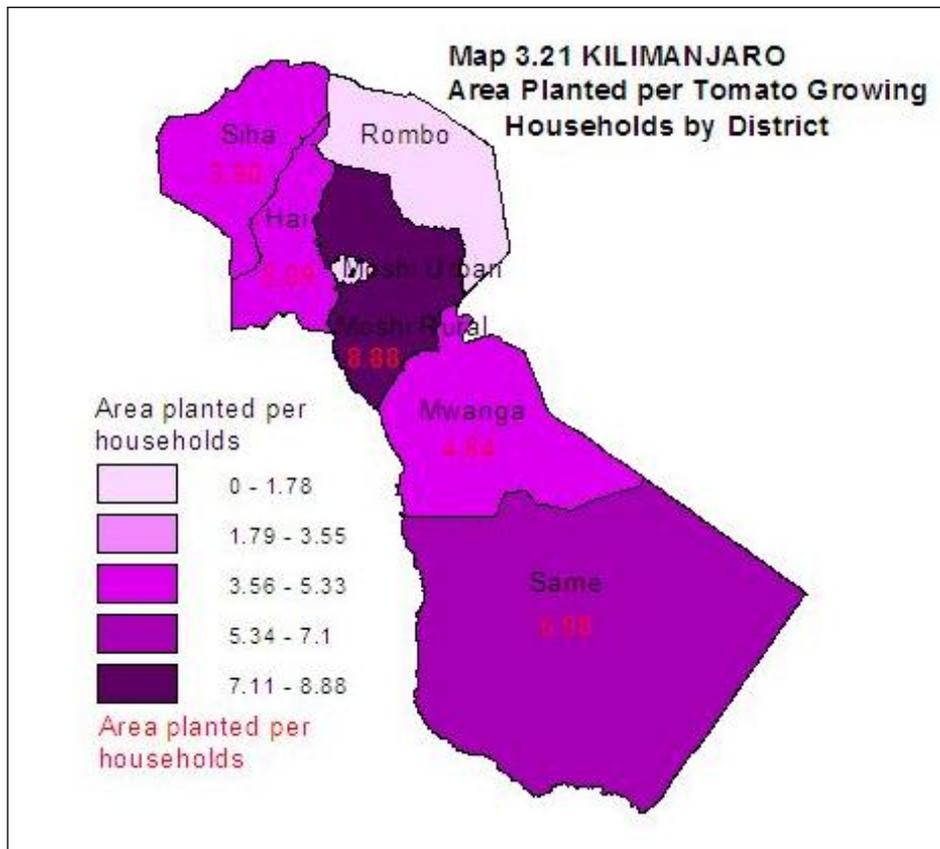

area planted with cabbage accounted for 25.6 percent of the total area planted with annual crops and vegetables in the region (3.23, 24).

### 3.3.8.3 Onions

During the 2007/08 agricultural census, a total number of 2,239 households were involved in growing onions in region. This represented 1 percent of the total crop growing households in the region. Same District had the largest area planted with onions (276 ha, 55.5% of the total area planted with Onions in the region). This was followed by Hai (211 ha, 42.4%), and Mwanga (10 ha, 2.1%). Onion

production was not reported in Siha, Moshi Rural and Rombo districts (Chart 3.36). Hai district had a higher yield of onions (4 tonnes per hectare), compared to Same (1 tonne per hectare) (Chart 3.36). The total area planted with onions accounted for 10 percent of the total area planted with annual crops and vegetables in the region during the short and long rainy seasons. ( 3.25, 3.26)

### 3.3.9 Other Annual Crop Production

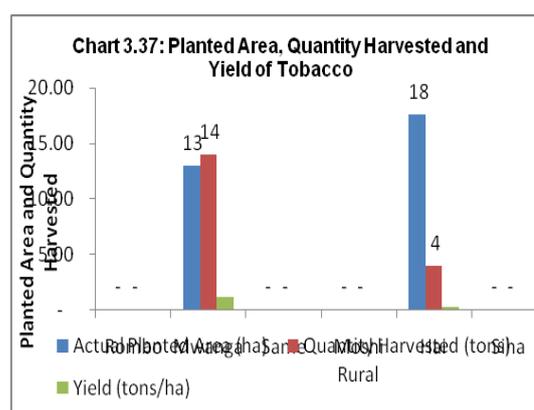

The other annual crops grown in region are cash crops. These crops include cotton, tobacco, and pyrethrum. Tobacco was the only cash crop that was reported during 2007/08 agricultural census (Table 3.7).

**Table 3.7: Annual Crops Planted Area and Quantity Harvested**

Cash Crops	Number of Households	Planted Area (ha)	Quantity Harvested	Yield (tons/hectare)
Cotton	0	0	0	0
Tobacco	277	31	18	1
Pyrethrum	0	0	0	0
Total	277	31	18	1

#### 3.3.9.1 Tobacco

Tobacco was the only annual cash crop produced during 2007/08 agriculture census in region, with the production of 18 tons planted on a total area of 31 hectares. Tobacco was grown in Mwanga and Hai Districts only, with the largest planted area of 18 hectares planted in Hai. Better yield of tobacco was realized in Mwanga district where an average of 1 tonnes per hectare was produced. In Hai, an average yield was 0.2 tonnes per hectare. Rombo, Same and Siha districts did not report production of Tobacco (Chart 3.37 and 3.27, 3.28).

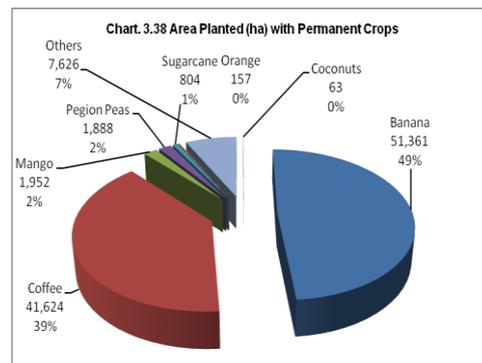

### 3.4 Permanent Crops

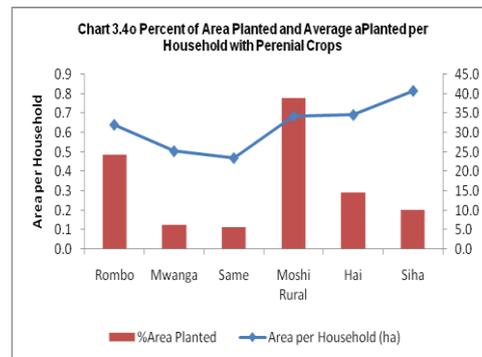

Permanent crops (sometimes referred as perennial crops) are crops that normally take over a year to mature and once mature they can be harvested for a number of year. Conversely, bananas normally take 9 to 12 months to bear fruits, tillering characteristics of bananas and thus treated as a permanent crop. In this report the agriculture census results are presented for the most important permanent crops in terms of planted area, production and yield.

The total area of smallholders planted with permanent crops was 105,476 hectares and total area harvested was 81,060 hectares in the region). Chart 3.38 Previous censuses and surveys did not measure these variables for permanent crops, therefore no time series analysis is made in this section.

The most important permanent crop in region was banana which had a planted area of 51,361 ha, (49% of the planted area of all permanent crops) followed by coffee (41,624ha, 39%), Mango (1952 ha , 2%), peagion peas (188ha, 2%),sugar cane ( 804ha, 1%), Orange ( 157 ha ,0.1%), Coconut (63ha, 0.1) (Chart 3.38 and 3.26 and 3.27).

Moshi Rural district had the largest area under smallholder permanent crops (40,953 ha, 39%), this was followed by Rombo (25,747 ha, 24.4%), Hai (15, 3,468 ha, 14.6%), Siha (10,683 ha, 10.1%), Mwanga (6,700ha, 6.4%), and lastly Same (6,047 ha, 5.7%). Siha had the largest area per permanent crop growing household (0.8 ha), followed by Hai and Moshi rural with 0.7 ha for both.

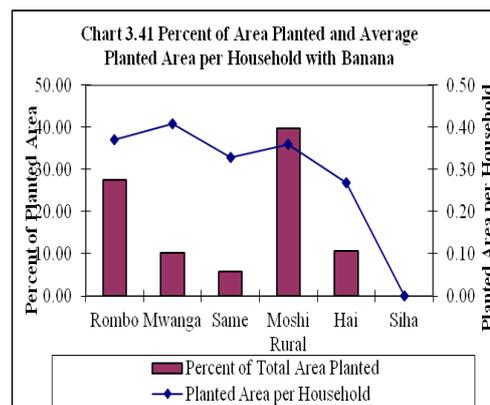

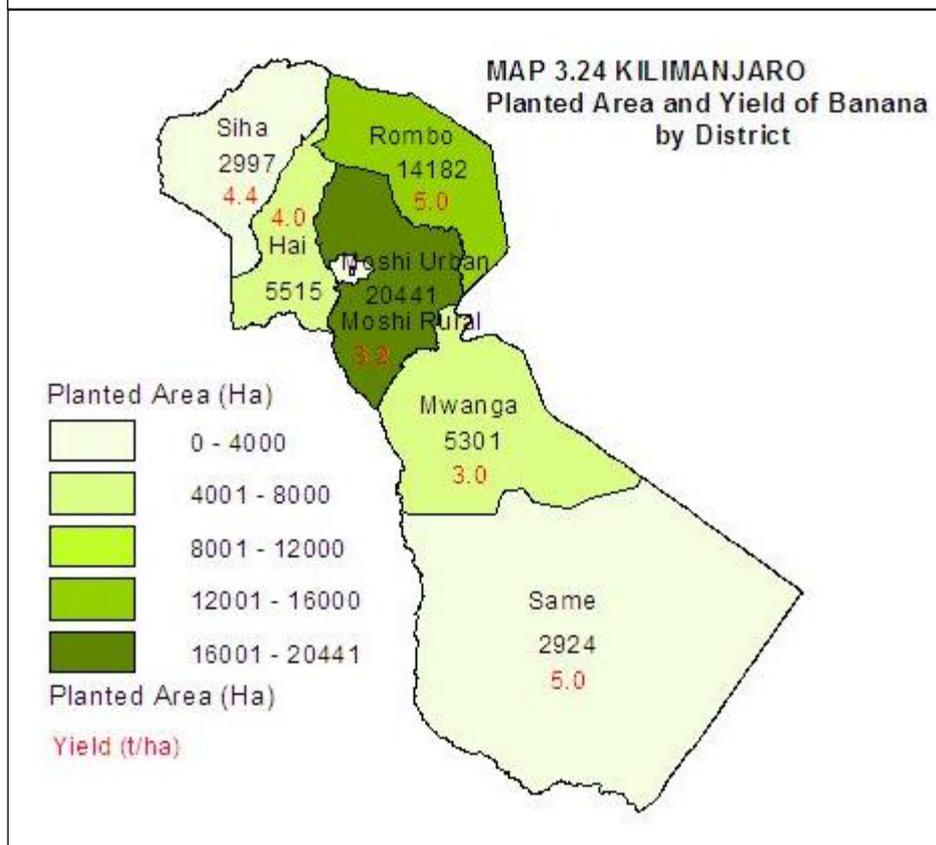

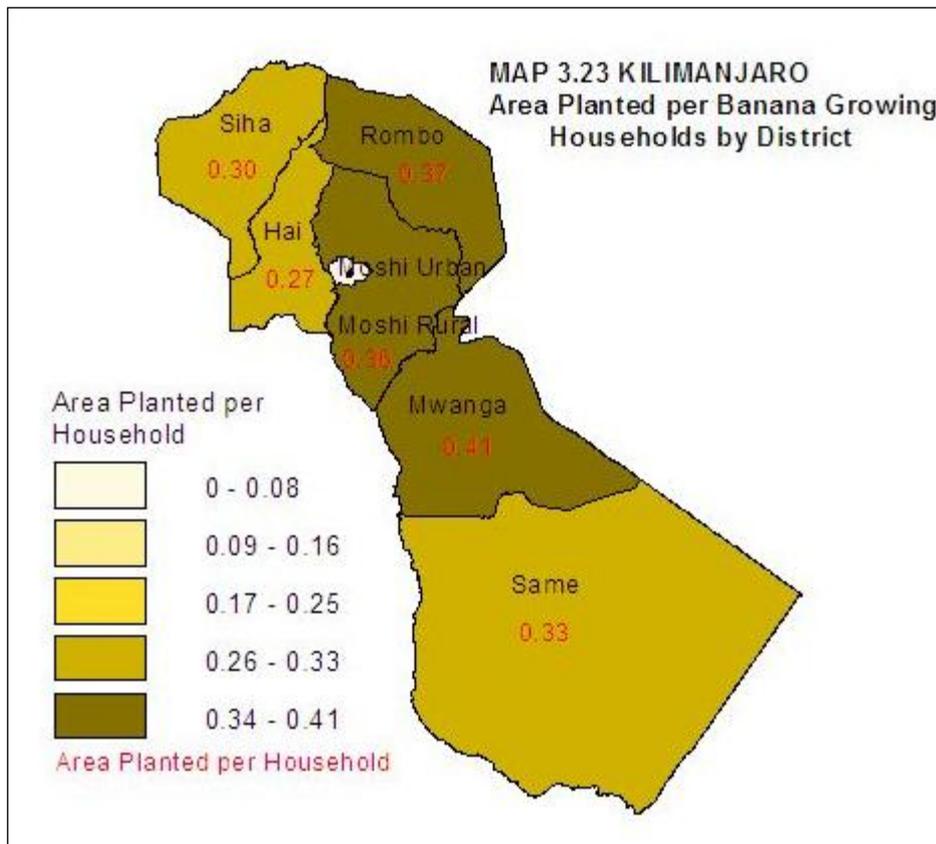

Same and Mwanga had the least area per permanent crop growing household of 0.5 ha for both, followed by Rombo (0.6 ha) (Chart 3.40).

### 3.4.1 Banana

Banana was the most important permanent crop in terms of acreage planted of an area of 51,361 ha, grown by 147,774 households. The total average area planted with Banana per household was relatively small of 0.3 ha. There were slight variations across the districts in terms of area planted with Banana per household. The area planted with Banana per household was highest in Mwanga, Rombo, and Moshi Rural with approximately 0.4 ha in each district, while Same, Hai and Siha districts each had an average of 0.3 hectares of planted area per household.

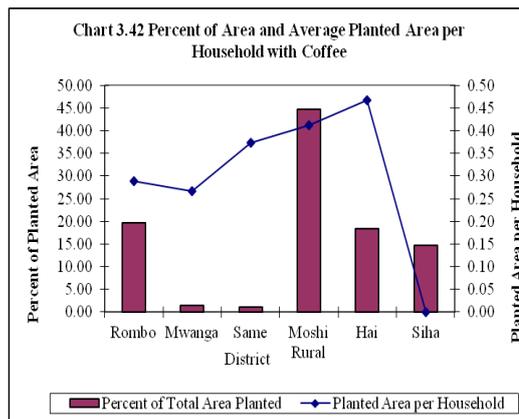

In terms of percentage of the total area planted with Banana Moshi Rural had the highest (40%), followed by Rombo (28%), Hai (11%), and Mwanga (10.3%), and Same and Siha had 6% each. (Chart 3.41 and 3.29).

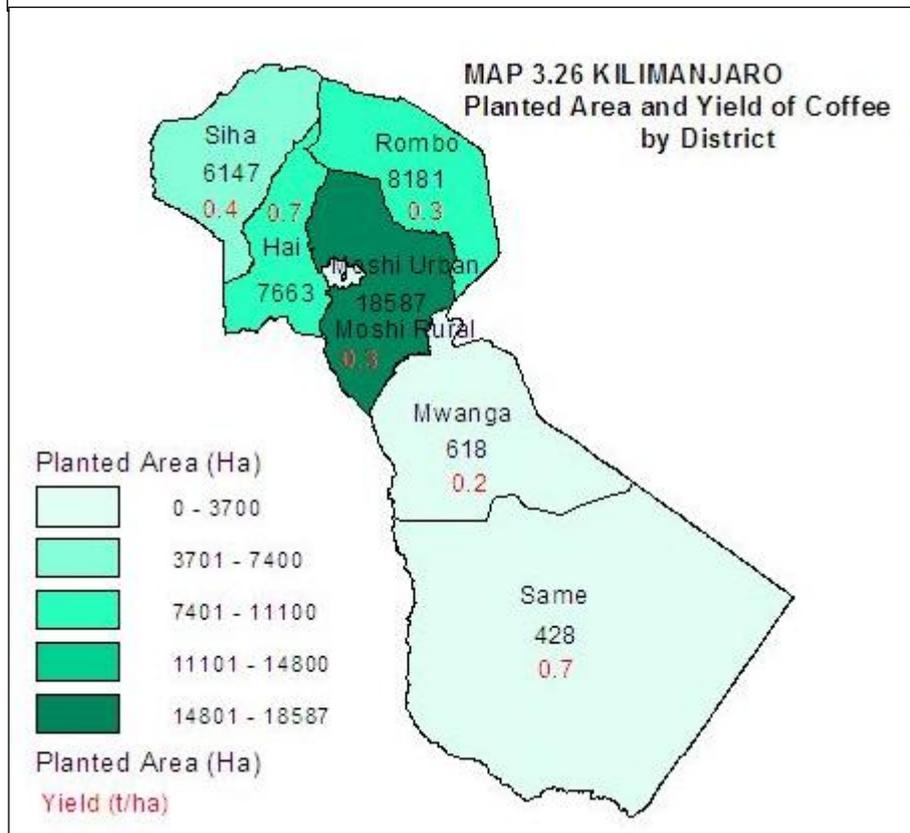

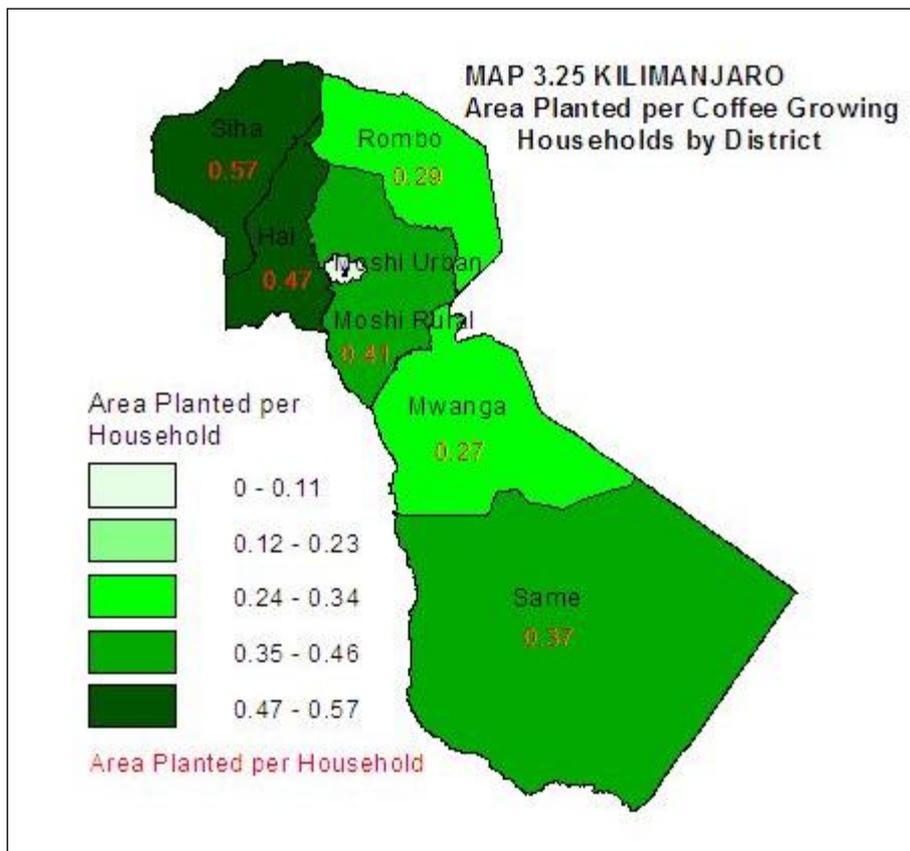

### 3.4.2 Coffee

Coffee was the second most important crop after banana grown by 104,061 smallholder households that is 10 percent of the total crop growing households. The average area planted with coffee per household was relatively small at around 0.4 ha. There were district variation in terms of the average area planted with coffee per household with Siha having the highest of 0.6 ha, followed by Hai 0.5ha. Rombo and Mwanga districts had the smallest area per household, 0.3ha each..

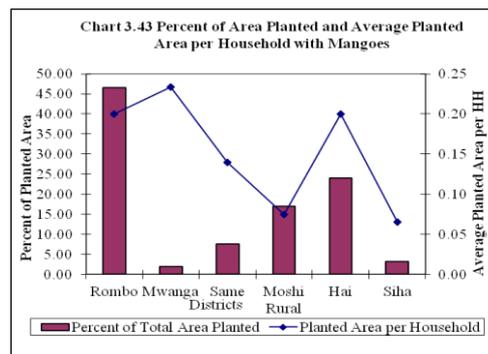

Moshi rural had the largest area planted with coffee in the region (18,587 ha, 45.%) followed by Rombo (8,181 ha, 20%), Hai (7,663 ha, 18.4%) and Siha (6,147 ha, 15%). The remaining districts had small percentage of the total area planted with coffee of less than 2 percent (Chart 3.42 and 3.31, 3.32).

### 3.4.4 Mangoes

In terms of area planted, Mangoes was among the least important permanent crop grown by smallholders in the region. It was grown by 13,474 households (8.3% of the total perennial crop growing households). The average area planted with Manoges per household was relatively small at around 0.1 ha per mango growing household. Rombo had the largest area planted with mangoes in the region (908 ha, 46.5 %), followed by Hai (468 ha, 24%, and Moshi Rural (331 ha, 17%). The remaining districts had small area planted with mangoes per household at less than 10 percent. (Chart 3.43)

## 3.5 Use of Inputs/Implements

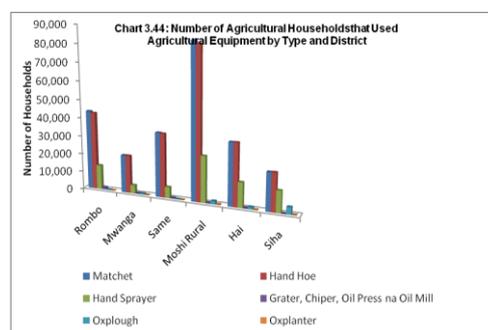

### 3.5.1 Methods of Land Clearing and use of agricultural equipment

Land clearing is a common pre-tillage operation practiced by most farmers in the region. Land clearing is divided into two categories: bush clearing, which by definition implies either expansion into virgin areas or into areas which have been left fallow for a long period while the other category, which includes burning, hand slashing or tractor slashing, is normally an annual clearing exercise to remove vegetation growth from the previous season.

Matchet and handhoe are the most widely used farming tools used for land clearing, applied by 99 and 98 percent respectively of agricultural households doing land clearing in . Other agricultural equipment used in order of importance include hand sprayer used by 31.2 percent of agricultural households, oxplough (3%), Grater, Chipper, Oil Press and Oil Mill (1.3%), and ox planter (0.2%)

Moshi Rural district had the highest percentage of agricultural households using matchet and hand hoe in land clearing (35 percent of agricultural households using both matchet and hand hoe for land clearing). Same and Hai had the second highest percentage of agricultural households using matchet and hand hoe for land clearing.

Same had 15 percent of agricultural households using matchet and hand hoe, and Hai had 14.4 and 15 percents of agricultural households using matchet and hand hoe respectively (Table 3.8, Chart 3.44) .

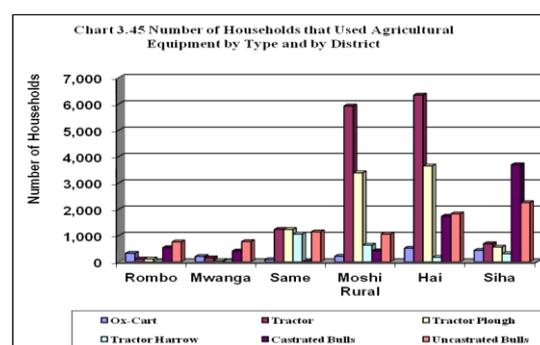

**Table 3.8 Number and Percentage of Agriculture Households that used Agricultural Equipment/Asset by type and District**

District	Equipment/Asset Type											
	Matchet		Hand Hoe		Hand Sprayer		Grater, Chipper, Oil Press and Oil Mill		Ox plough		Ox planter	
	Number	%	Number	%	Number	%	Number	%	Number	%	Number	%
Rombo	43,346	18.0	42,590	17.9	13,404	30.6	1,189	2.7	108	0.2	0	0.0
Mwanga	20,787	8.7	20,787	8.7	4,591	22.0	413	2.0	464	2.2	52	0.2
Same	35,386	14.7	35,122	14.8	6,074	17.0	440	1.2	88	0.2	0	0.0
Moshi Rural	85,029	35.4	83,548	35.1	25,593	29.9	423	0.5	1,692	2.0	212	0.2
Hai	34,546	14.4	34,633	14.6	13,888	39.5	434	1.2	1,215	3.5	87	0.2
Siha	21,134	8.8	21,259	8.9	12,068	55.9	188	0.9	4,002	18.6	188	0.9
Total	240,228	99.0	237,939	98.0	75,617	31.2	3,086	1.3	7,569	3.1	537	0.2

### 3.5.2 Methods of Soil Preparation

Tractor was one of the farming tools used in region for soil preparation and was used by 14,442 agricultural households, representing 34 percent of the total agricultural households using equipment for soil preparation, followed by tractor ploughing (8,985 households, 21%), uncastrated bulls (7,806 households, 19%) and Castrated Bulls (6,801 households, 16.2%). Ox cart is the least used equipment in soil preparation used only by 1,789 agricultural households representing 4.3 percent, followed by Tractor harrow used by 2,177 households which is 5.2 percent of agricultural households using equipment in land preparation.

For most important methods of soil preparation, Hai and Moshi Rural had the highest number of agricultural households (6,336hh, 15.1% and 5,922hh, 14.4%) respectively) using Tractor to prepare soil. Tractor Plough is widely used in Hai (3,646 households, 9%), followed by Moshi Rural (3,384 households, 8.1%), and Same (1,232 households, 3%). Uncastrated bulls were widely used in Siha (5.4%), Hai (4%), Same and Moshi Rural by 3 percent of agricultural households for both districts. Castrated bulls were widely used in Siha by 9 percent and Hai by 4.1 percent of agricultural households using agricultural equipment to prepare soil in region (Table 3.9, Chart 3.45)

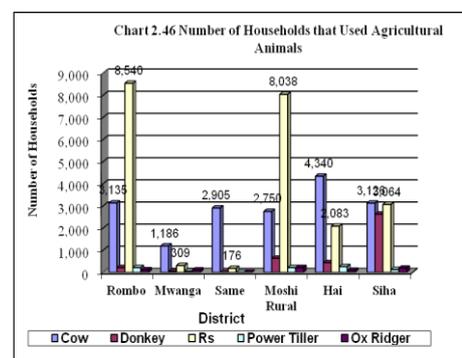

**Table 3.9 Number of Households that Used Agricultural Equipment by Type and District**

District	Equipment/Asset Name											
	Ox cart		Tractor		Tractor plough		Tractor Harrow		Castrated bulls		Uncastrated bulls	
	Number	%	Number	%	Number	%	Number		Number	%	Number	%
Rombo	324	0.8	108	0.3	108	0.3	0	0	540	1.3	757	1.8
Mwanga	206	0.5	155	0.4	52	0.1	0	0	413	1	774	1.8
Same	88	0.2	1,232	2.9	1,232	2.9	1,056	2.5	0	0	1,144	2.7
Moshi Rural	212	0.5	5,922	14.1	3,384	8.1	635	1.5	423	1	1,058	2.5
Hai	521	1.2	6,336	15.1	3,646	8.7	174	0.4	1,736	4.1	1,823	4.3
Siha	438	1	688	1.6	563	1.3	313	0.7	3,689	8.8	2,251	5.4
Total	1,789	4.3	14,442	34.4	8,985	21.4	2,177	5.2	6,801	16.2	7,806	18.6

### 3.5.2.1 Use of Agricultural Animals and Equipment

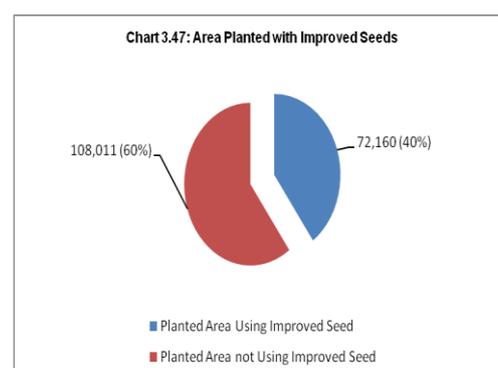

There was also an extensive use of agricultural animals and equipment in farming activities. Shellers/Thresher (22,210 household, 9.2%) was the most widely used equipment in farming activities in the region, followed by Cow 17,442 agricultural households (7.2%) , and Donkey (3,962 households, 2%). Power and Ox Ridger had the lowest number of agricultural household (less than 1 percent) using them.

There were variations across District in terms of using animals and equipment in farming activities. Cow was widely used in Siha and Hai districts by 15 and 12 percent respectively of agricultural households using the animals and equipment. Donkey is widely used in Siha (12.2%), while Thresher is widely used in Rombo and Moshi Rural, representing 20 and 14.2 percents respectively agricultural households using the animals and equipment. Power Tilletr and Ox Ridger were not recotrded in Same District(Chart 3.46).

### 3.5.3 Use of Improved Seeds

he planted area using improved seeds was estimated at 72,160 ha, which represented 40 percent of the total area planted with the annual crops and vegetables. The area planted without improved seeds was 108,011ha representing 60 percent of the total area planted with the annual crops and vegetables. (Chart 3.47).

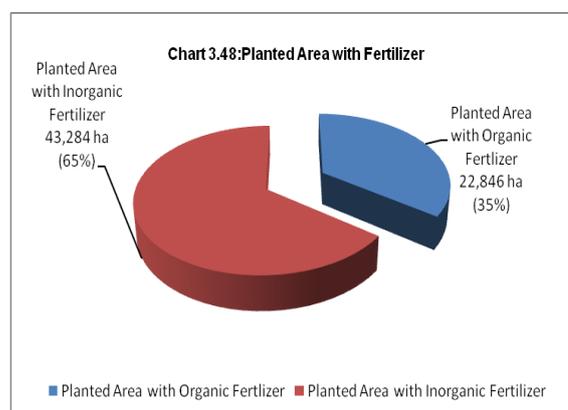

**Table 3.10 Area and percentage area Planted with and without Improved Seeds by districts**

District	Planted Area with Improved Seeds	% of Planted Area with Improved Seeds	Planted Area without Improved Seeds	% of Planted Area without Improved Seeds
Rombo	10,327	6	17,694	10
Mwanga	8,894	5	11,482	6
Same	7,670	4	30,692	17
Moshi Rural	21,133	12	25,965	14

The use of improved seeds was more pronounced in Moshi Rural district where 12% of the total area planted with annual crops in the region used improved seeds. This was followed by Hai, Siha and Rombo districts, where 7%, 6% and 6% of the planted area used improved seeds respectively.

### 3.5.4 Fertilizer Use

The use of fertilisers on annual crops was moderate with a planted area of 66,130 ha (37 percent of the total planted area of 180,171 ha in the region ) during both long and short rainy seasons . Of the total area planted with fertilizers 22,846 ha representing 35 percent was planted with organic ferlizers and 43,284 ha representing 65 percent was planted with inorganic fertilizers. Therefore the area planted with inorganic ferlizers in both seasons was slightly higher than the area planted with organic fertilizers in the corresponding seasons during the census year (Chart 3. 48).

### Organic Fertilisers Use

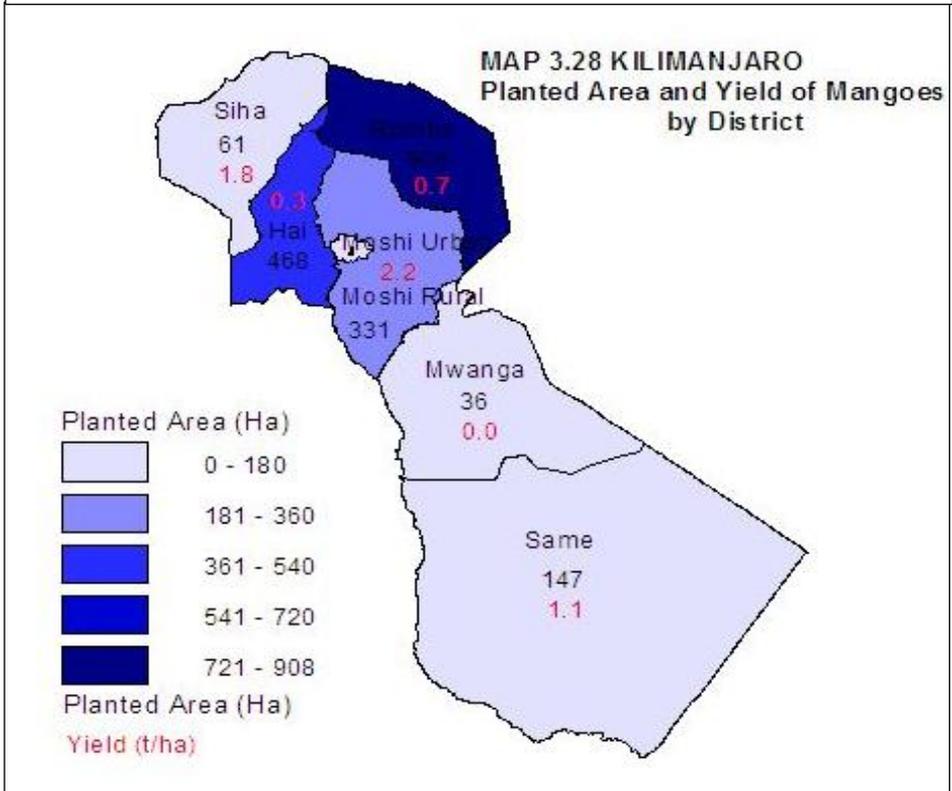

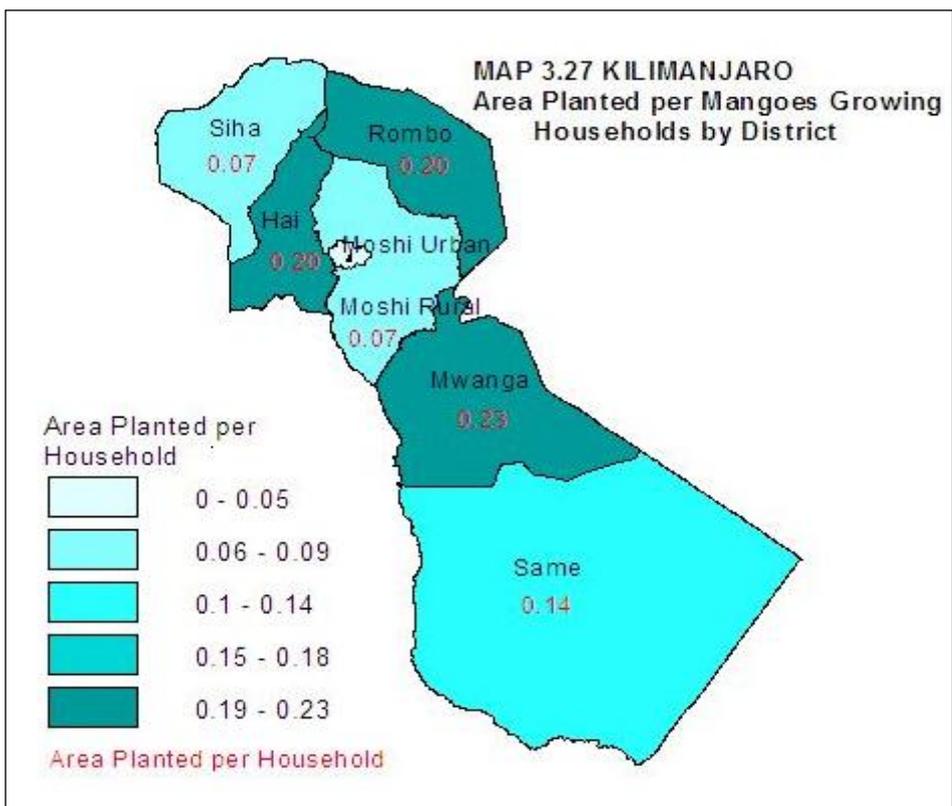

he total planted area applied with Organic fertiliser in region was 22,846 ha representing 35% of the area planted with fertilisers in the region. District profile on utilisation of feriltisers indicates Moshi Rural as having the largest area planted with organic fertlizer (7,137ha, 31%) during long and short rainy seasons, followed by Rombo ( 6,595ha, 29%). Same and Mwanga had moderate application of organic fertiliser of 3,246 ha (14%) and 2,324 ha (10%) respectively. The remaining districts had low application of organic ferlizers of less than 10 percent of the total area planted with organic fertiliser during the long and short rainy seasons during the census year (Table 3.11)

### Inorganic Fertiliser Use

The total planted area applied with inorganic fertilisers in region was 43,284 ha which represents 24% percent of the total area planted with fertiliser. The trend in the application of inorganic fertilizers also indicates Moshi Rural as leading at 16,043 hectares representing 9% of the total are planted with inorgainc fertilizers. Moshi Rural had the largest area planted with annual crops and vegetables in the region, hence application of fertiliser is also expected to be high. Hai had the second largest area planted with inorganic fertliser (12,128 ha, 7%). Siha was third with the largest area planted with inorganic fertilizers at 6,503 ha (2%). Same and Rombo had amoderate area planted using inorganic fertilizer at 2% each, and Mwanganga had the smallest area planted with inorganic fertilisers at 1,362 ha (1%). (Table 3.11).

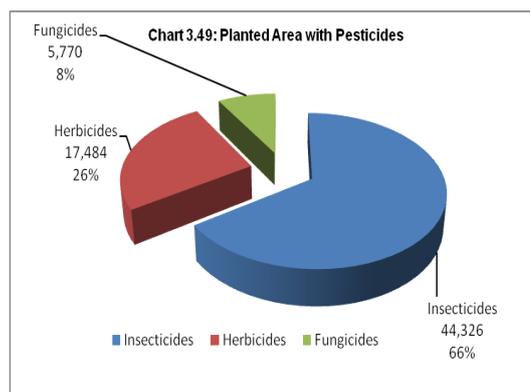

**Table 3.11 Planted Area with Fertilizer during long and short rainy seasons**

District	Planted Area Applied with Organic Fertilizer in Short rain Season	Planted Area Applied with Organic Fertilizer in Long Rain Season	Planted Area Applied with Inorganic Fertilizer in Short Rain Season	Planted Area Applied with Inorganic Fertilizer Long Rain Season	Planted Area Applied with Organic Fertilizer in Vuli & Masika	Planted Area Applied with Inorganic Fertilizer Vuli & masika	% of Planted area using Organic Fertilizer in Short Rain Season	% of Planted area using Organic Fertilizer in Long Rain Season
Rombo	5,068	1,527	2,124	1,481	6,595	3,651	-	12.2
Mwanganga	1,504	820	913	449	2,324	1,733	14.4	8.2
Same	2,576	670	3,019	624	3,246	3,689	10.0	5.3
Moshi Rural	3,864	3,273	5,046	10,997	7,137	8,319	21.9	11.1
Hai	918	1,172	3,013	9,115	2,090	4,185	14.2	6.4
Siha	297	1,156	592	5,911	1,454	1,748	10.3	6.3
Total	14,228	8,618	14,707	28,577	22,846	23,325	18.1	8.5

### 3.5.5 Pesticide Use

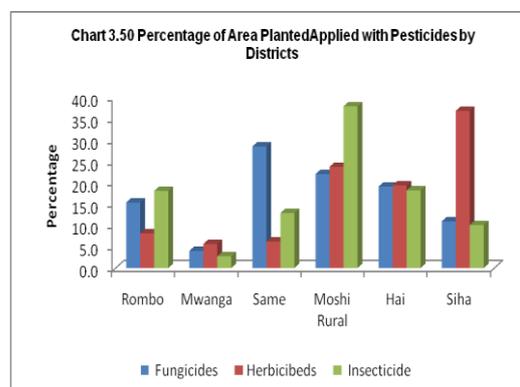

Pesticides are chemicals used for controlling insects, diseases and weeds. This section analyses the use of these chemicals by smallholders on both annual and permanent crops in the region. Pesticides were applied to a planted area of 107,916 ha of annual crops and vegetables. Insecticides are the most common pesticide used in the region applied to an area of 44,326 ha (66% of the total area applied with pesticides). This was

followed by herbicides which was applied to a total area of 17,484 ha (26%) and fungicides applied to an area of 5,770 ha (8.5%) (Chart 3.49).

#### 3.5.5.1 Insecticide Use

The planted area applied with insecticides was estimated at 44,326 ha which represented 66 percent of the total planted area applied with pesticides. Moshi Rural District had the largest area of annual crops planted with insecticides (16,816 ha, 37% of the area planted with insecticides in the region). This was followed by Hai (8,075 ha, 18%), Rombo (8,024 ha, 18%), Same (5,725 ha, 12.9%), Siha (4,446 ha, 10.1%). The smallest percentage use was recorded in Mwanga district (1,220 ha, 3%) (Chart 3.50).

#### 3.5.5.2 Herbicide Use

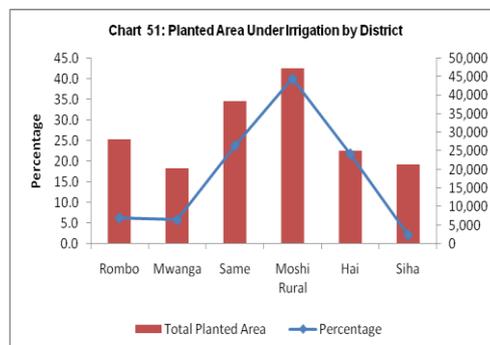

The planted area applied with herbicides was 17,484 ha which represented 26 percent of the total planted area annual crops and vegetables. The largest area of annual crops planted and applied with herbicides was Siha district (6,444 ha, 36.8% of the area of annual crops planted with herbicides in the region). This was followed by Moshi Rural (4,149 ha, 23.7%), Hai (3,393 ha, 18%), Rombo (1,423 ha, 8.1%), Same (1,089 ha, 6.2%). Mwanga had the smallest area of annual crops planted with herbicide in the region (987 ha, 5.6%) (Chart 3.50).

### 3.6 Irrigation

Water was the limiting factor to crop production in the majority of areas in Tanzania and without water most other agricultural practices applied to crops will not have any significant increases in yields. This section deals with the area under irrigation for different crops and the means by which water was extracted from the source and applied to the field (Chart 3.51).

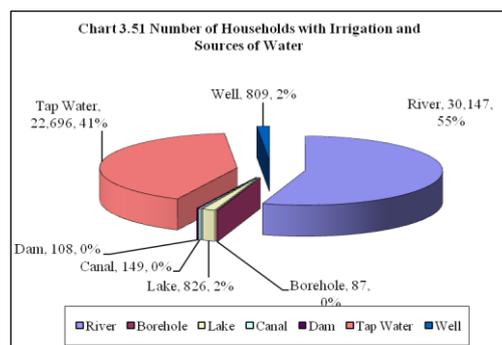

#### 3.6.1 Area Planted with Annual Crops Under Irrigation

In region, the area of annual crops under irrigation was 36,607 ha representing 20 percent of the total area planted (Chart 3.51). The district with the largest planted area under irrigation for annual crops was Moshi Rural (14,652 ha, 40% of the total irrigated planted area with annual crops in the region). This was followed by Same with (8,731 ha, 23.9%), Hai (7,984 ha, 21.8%), Rombo (2,305 ha, 6.3%) and Mwanga (2,128 ha, 6%). Siha had the smallest area planted using irrigation at 806 (2.2%).

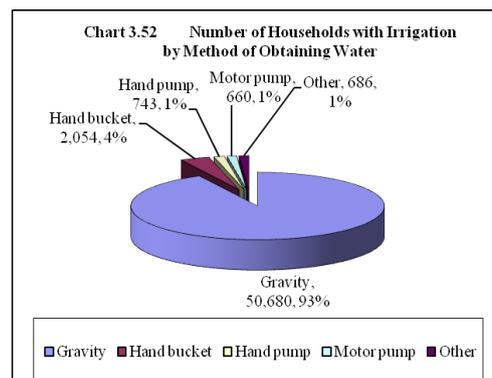

#### 3.6.2 Sources of Water Used for Irrigation

The main source of water used for irrigation was Rivers at 30147 hh, representing 55 percent of households with irrigation. This was followed by Tap Water (22,696 households, representing 41%). Lakes and Wells were the third most important sources of irrigated water used by 826 and 809 households respectively representing 2 percent of households using water for irrigation in each source. The other sources were less important contributing only less than 1 percent of the total households using water for irrigation (Chart 3.51).

#### 3.6.3 Methods of Obtaining Water for Irrigation

The hand gravity was the most common method of getting water for irrigation with 50,680 households or 93 percent of households using this method in obtaining water. This was followed by hand bucket with 4 percent of households. The remaining methods (hand pump, motor pump and others) had 1 percent each (Chart 3.52).

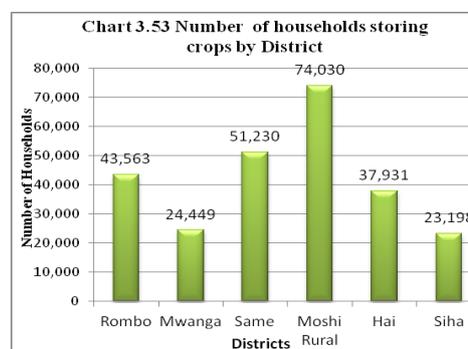

Gravity was the most commonly used method of obtaining water for irrigation in Moshi Rural (32% of the households practicing irrigation), followed by Hai (30.2%), and Same (22.2%). The method was least practised in other districts by less than 5 percent.

### 3.7 Crop Storage, Processing and Marketing

#### 3.7.1 Crop Storage

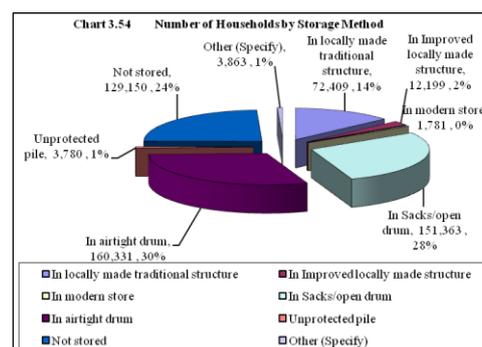

Crop storage means keeping a crop for a certain period of time as food for the household, in order to sell at higher prices or use the crop as seeds for planting in the following season. The results for the region show that there were 254,401 crop growing households that stored various agricultural products in the region. Moshi Rural had the highest number of households that stored crops (74,030

households, 29 percent of the crop growing households storing crops). This was followed by Same (51,230 hh, 20%), Rombo and Hai (43,563 hh, 17% and 37,931 households, 15% respectively). Siha had the smallest number of households storing crops (23,198 households, 9%), followed by Mwangi 24,449hh, 10%) (Table 3.10, Chart 3.53)

##### 3.7.1.1 Methods of Storage

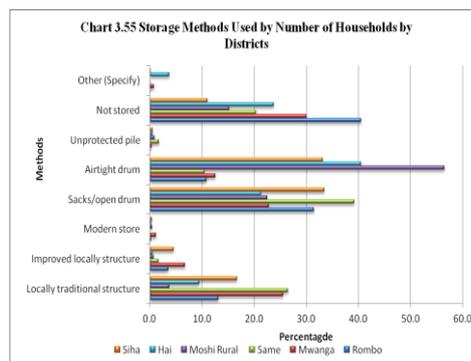

In terms of methods of crop storage the region had the highest number of crop growing households storing their produce in airtight drum (160,331 households, 30% of the households that stored crops in the region). Sacks /open drum was the second most widely used method applied by 151,363 households, that is 28 percent of the households that stored crops in the region. The number of households that stored their produce in locally made traditional crib was 72,409 (14%). This was followed by improved locally made structure (12,199 hh, 2%), other types of storage include unprotected pile (3,780 hh, 1%), modern store (1,781hh, 0%). Estimated 129,150 households (24% of crop growing households) were reported as not using any storage methods (Chart 3.54).

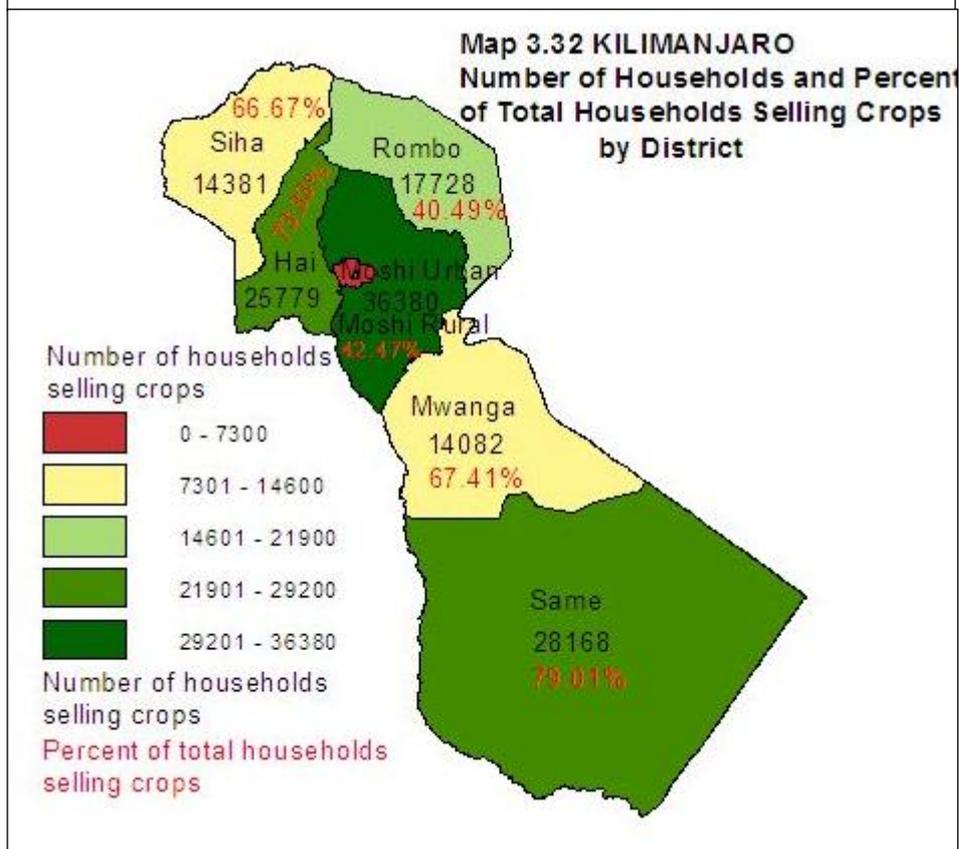

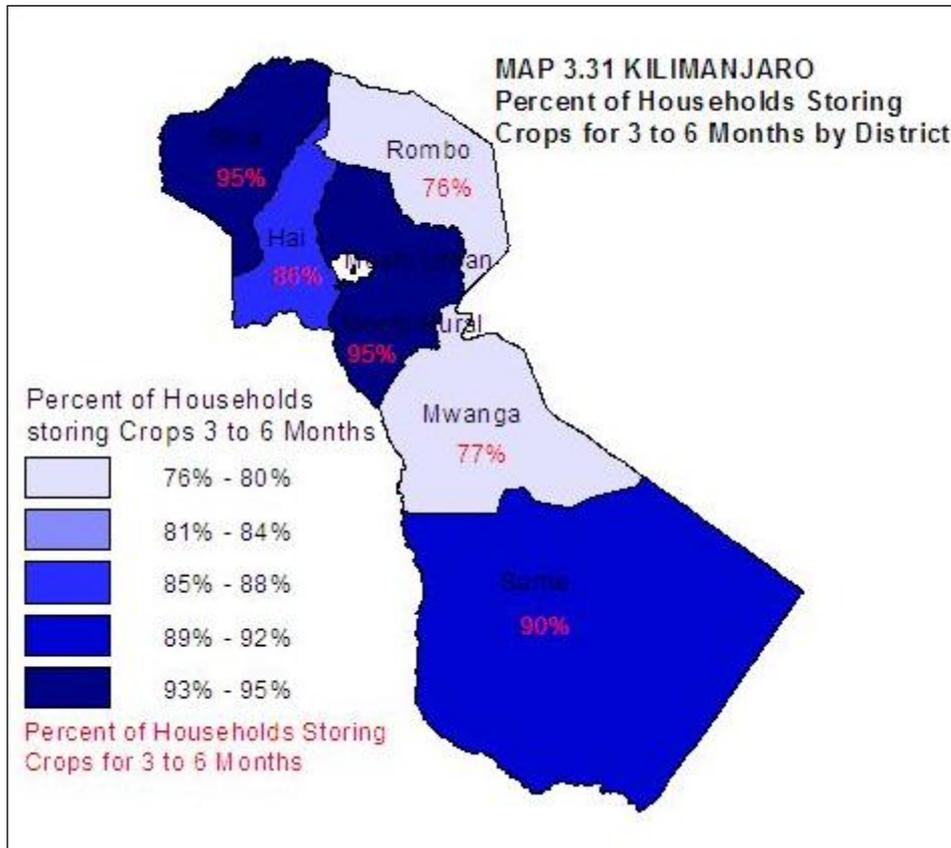

Airtight Drums were the dominant storage methods in the region, with Moshi Rural having the highest percent of households using this method (20.6% of the total number of households storing

crop products). This is followed by Hai (9%), Rombo and Siha (% each), Same and Mwanga with 2.5 and 2.4 percent respectively.

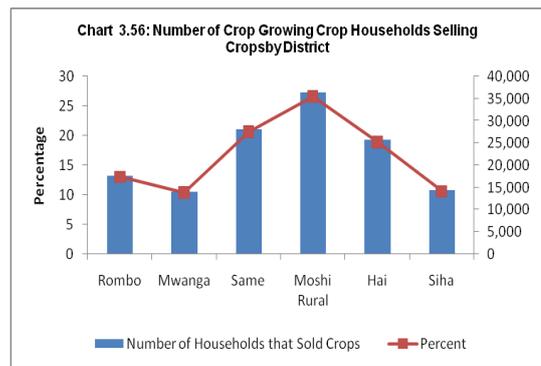

The method was least used in Hai (21.4%) (Chart 3.57). The second widely used method was sacks and open drum with Rombo having the highest percentage of households using it (10%), followed by Same district (9%) and Hai (5%) of the total households using storage methods. Local traditional method was the third most widely applied storage method used by the highest percentage of households in Same and Rombo districts (6 and 4 percents respectively of the total number of households storing crops. (Chart 3.55)

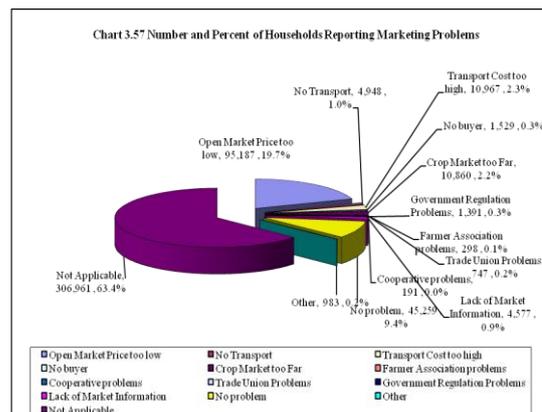

### 3.7.3 Crop Marketing

The number of households that reported selling crops was 136,518 which represent 57 percent of the total number of crop growing households. The percentage of crop growing households selling crops was highest in Moshi Rural (27%) followed by Same (21%), Hai (19%), Rombo (13%) and Mwanga (10%) (Chart 3.56 and 3.36).

#### 3.7.3.1 Main Marketing Problems

Most households (11,255 20) reported low price for agricultural produce in the open market as the main marketing problem. Apart from low market prices, other problems reported include transport cost being too high ( 1,188 households), long distances to the markets ( 188 households) and lack of transport ( 63 households). Other marketing problems are minor and represented less than 1 percent of the total reported problems (Chart 3.57). The problem of low market prices in the open market ranked highly across all the districts in the region. High transport cost ranked highly in Moshi Rural followed by Hai Districts. While long distances to the market was a notorious marketing problem in Moshi Rural, followed by Same and Hai Districts

### 3.8 Access to Crop Production Services

#### 3.8.1 Access to Agricultural Credit

The census result shows that in region very few agricultural households (3,788, 1. 6%) accessed credit out of the total number of agricultural households receiving agricultural credit in the region. Out of these Siha District had the highest number of households receiving credit (1,188 house,31.4), followed by Rombo (973 households 26%). Moshi Rural was the third district with the highest number of agricultural hoshholds receiving credits

District	Number of Households	Percentage
Rombo	973	26
Mwanga	258	7
Same	176	5
Moshi Rural	846	22
Hai	347	9

(846hh, 22.3 %). The remaining districts had very small numbers of households receiving credits of less than 10 percent of the total agricultural households receiving credits (Table 3.12).

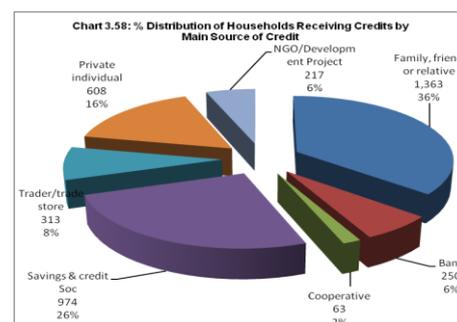

Out of the households receiving agricultural credits 2,791 (73.7%) were male-headed households and 997 (26.3%) were female headed households. In all the districts there were more male than female households heads receiving agricultural credits. Siha had the highest number of female household heads receiving agricultural credits (313 households, 26.3%) followed by Moshi Rural (212 (25%) (Table 3.13). In Same and Hai districts both male and female headed households had equal access to agricultural credit.

**Table 3.13 Number and Percentage of credits given to households heads by sex and District**

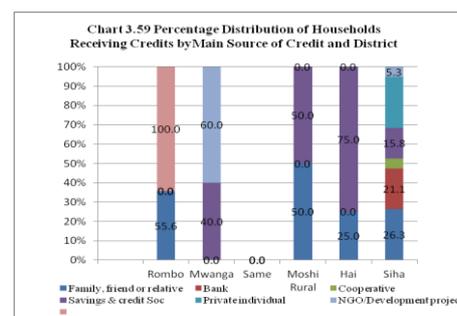

District	Credit given to (7.1.1b)					
	Male		Female		Total	
	Number	%	Number	%	Number	%
Rombo	865	88.9	108	11.1	973	100.0
Mwanga	155	60.0	103	40.0	258	100.0
Same	88	50.0	88	50.0	176	100.0
Moshi Rural	635	75.0	212	25.0	846	100.0
Hai	174	50.0	174	50.0	347	100.0
Siha	875	73.7	313	26.3	1,188	100.0
Total	2,791	73.7	997	26.3	3,788	100.0

### 3.8.1.1 Source of Agricultural Credit

The major agricultural credit providers in region were family, friends and relatives (36%), Saving and Credit Society (26%), Private Individual (16%), Religious Organizations/Non Governmental Organizations/ projects (38%), trader/trade store (8%), NGO/Development Project and commercial bank (6% for both) and cooperatives (2% of the total number of households that accessed credit) (Chart 3.58).

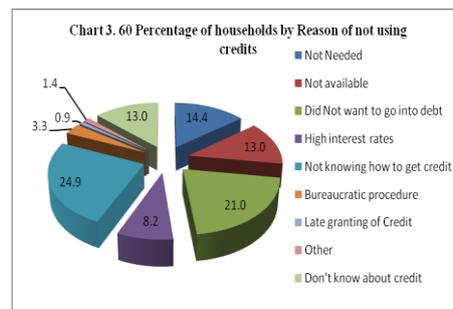

Commercial banks, Cooperatives and Trader/trade store were the sole source of credit in Siha district only, while NGO/Development project were a source of credit in Mwanga and Siha. Family and friends/relative were a source in all the districts except Mwanga and Same; likewise Savings and Credit Societies were a source in all the districts except Rombo and Same (Chart 3.59).

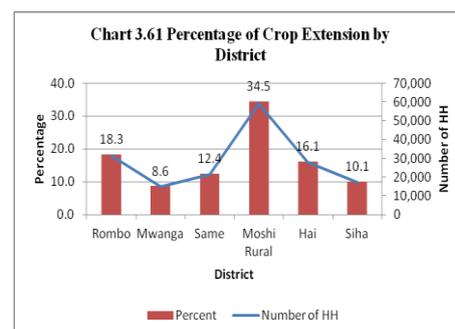

### 3.8.1.2 Reasons for Not Using Agricultural Credit

The main reason for not using agricultural credit as a source of finance was little credit awareness accounting to 24.9 percent of the agricultural households (“did not know how to get credit”). This was followed by “not wanting to go into debt” (21%), households reporting the credit not needed (14.4%), households reporting un-availability of credit and don’t know about credit accounted for 13 percent in each case. Households reporting interest rate too high (8.2%), bureaucratic procedures (3.3%) . The rest of the reasons were collectively accounted for 2. percent of the households, and these were late granting of credit and other reasons (Chart 3.60).

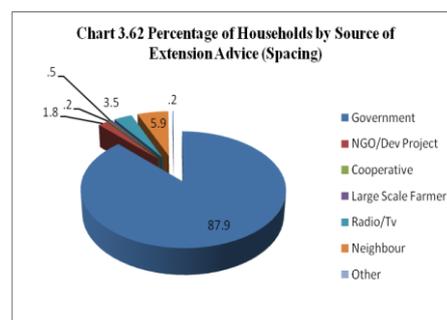

### 3.8.2 Crop Extension

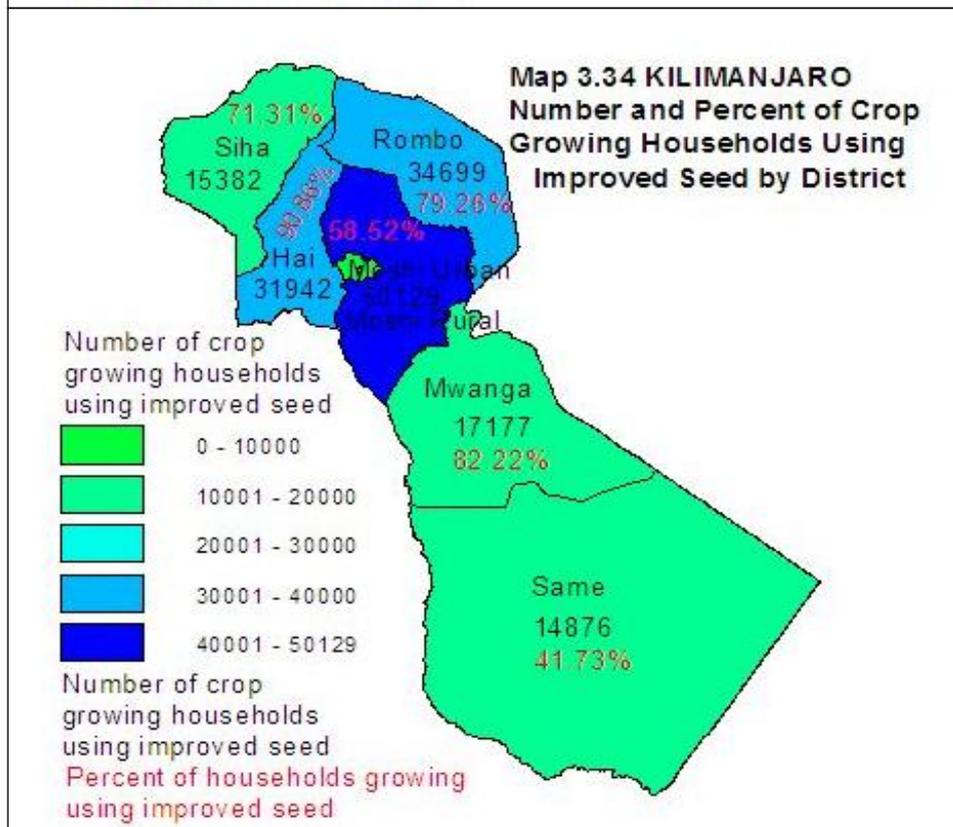

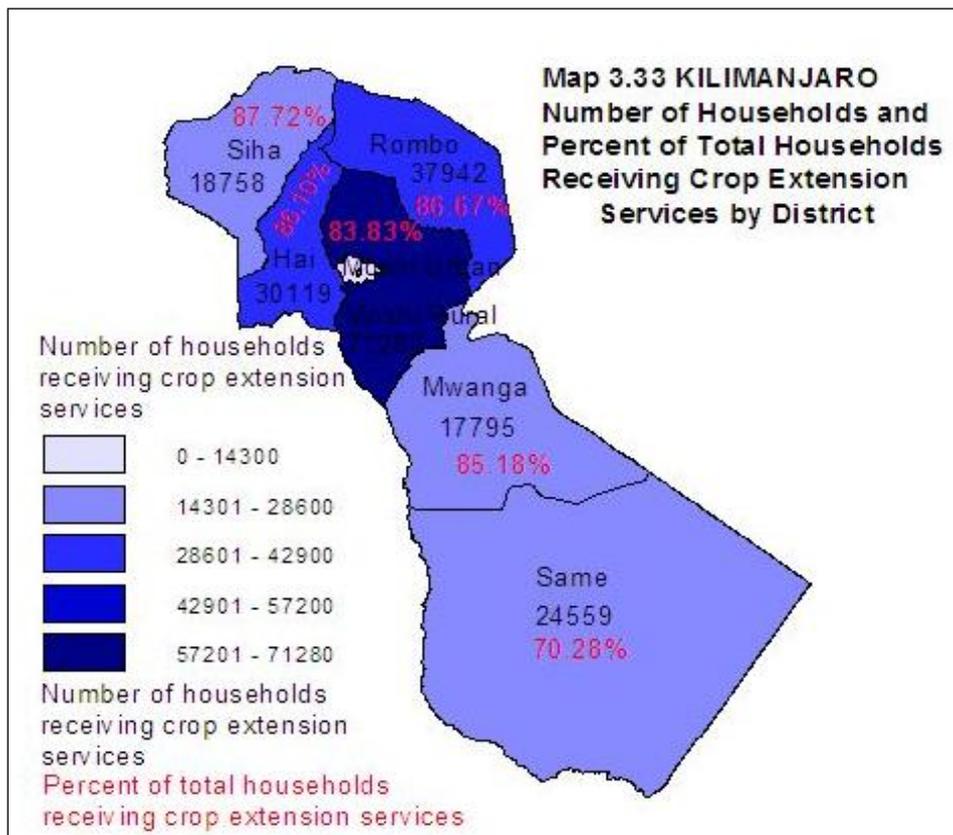

The number of Agricultural households that received crop extension was 200,454 (83 % of total crop growing households in the region) (Chart 3.61). Some districts have more access to extension services than others, with Moshi Rural district having a relatively high proportion of households (36%) that received crop extension messages followed by Rombo (19%), Hai (15%), Same (12.4%), Siha (9), and Mwanga (9%).(Chart 3.61 and 3.37). Number of Agricultural households participated in Out Grower Agreement and Contract Grower was 13,665 (5.6%) and 6,523 (2.7%) of total agricultural households in the region respectively.

#### 3.8.2.1 Sources of Crop Extension Messages

The Government provided the greatest proportion (92.3%) of extension advice to agricultural households receiving extension advice . Radio/Tv (22.9%) was the second largest extension advice provider (21.8%), followed by Neighbour 21.8%, NGO/Development project (9%), and large scale farmer providing ( 4.8%). The remaining sources were minor and provided extension advice to less than 5 percent of agricultural households receiving extension advice; these were cooperative and other with 4.7 and 2.8 percent respectively (Chart 3.62, 3.37) Extension advice on spacing had the largest number of households (171,909, 70.8%), followed by use of improved seed (66.6%), use of organic fertilizer (63.6%), Agrochemical use (63.1), use of inorganic fertilizer (57.9%), erosion control (49.5), Crop storage technology (48.8) and smallest number was on irrigation technology (34.2%) of the total agricultural households in the region.

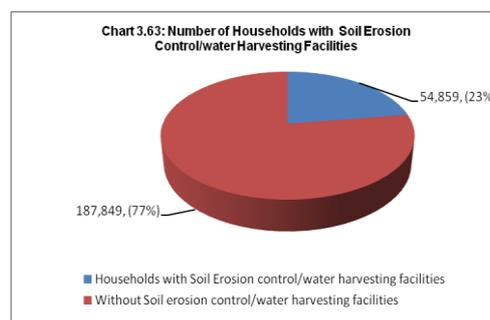

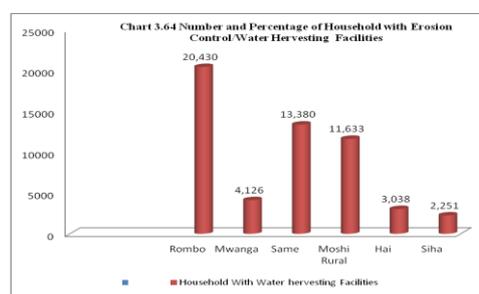

### 3.10 Irrigation and Erosion Control Facilities

Erosion control and water harvesting facilities are grouped together as they normally have dual purposes of reducing erosion and increasing the amount of water available for crop production.

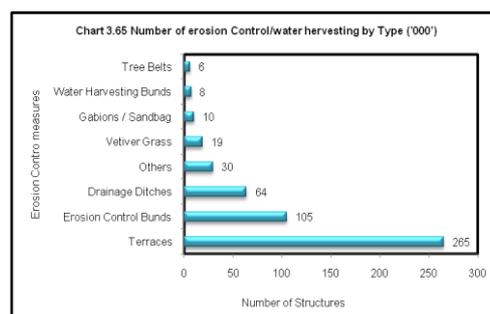

The number of agricultural households that had soil erosion and water harvesting facilities on their farms was 54,859 which represent 23 percent of the total number of agricultural households in the region. On the other hand those without erosion control and water harvesting facilities were 187,849 accounting for 77.4 percent of agricultural households in the region. This percent was more than three times of agricultural households with the facilities, which increases the chances of high water wastage (Chart 3.63)

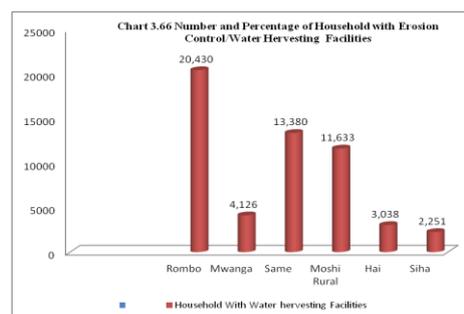

The proportion of households with soil erosion control and water harvesting facilities was highest in Rombo district (47%) followed by Same (38%), Mwanga (20%), Moshi Rural (14%) Siha (10.4%), and Rombo Hai (8%). (Chart 3.64).

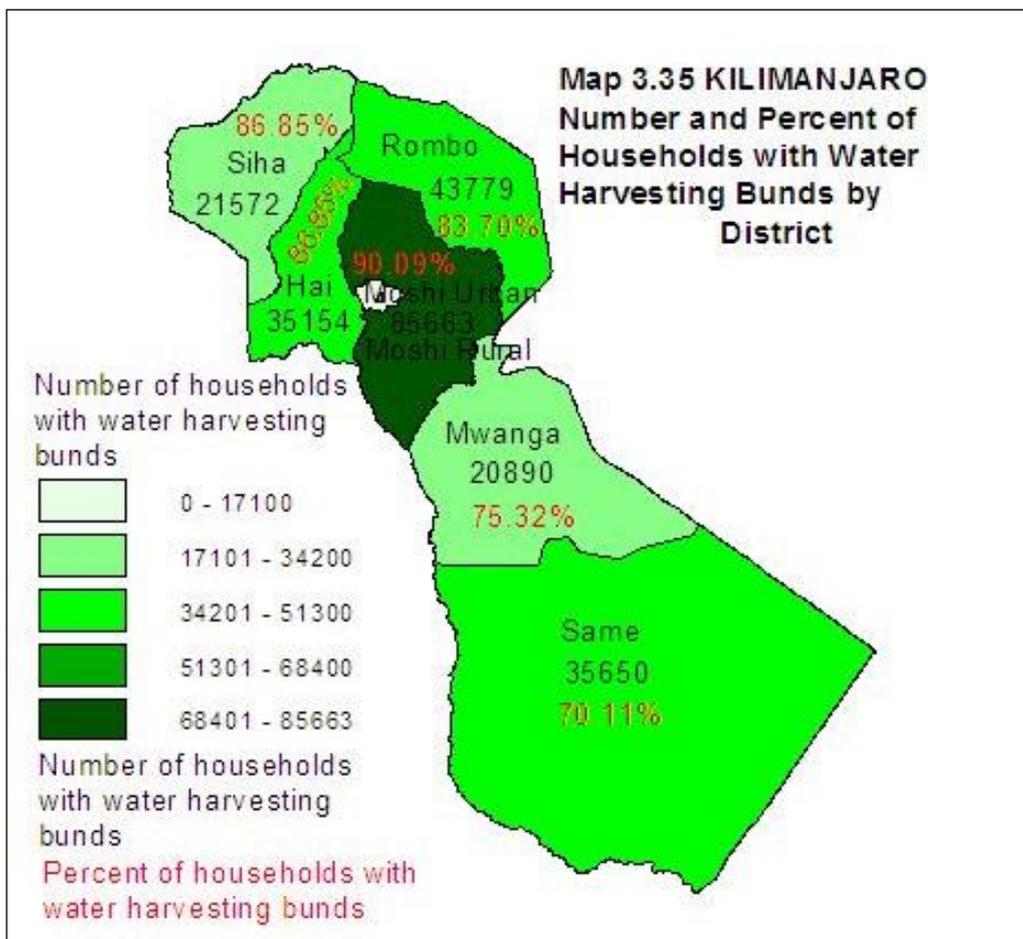

Terraces accounted for 52.3 percent of the total number of structures, followed by Erosion control bunds (20.8%), drainage ditches (12.6%), vetiver grass (3.7%), Gabions/Sandbags (2%), Water harvesting bunds (1.5%), and tree belts (1.3%) (Chart 3.65 and 3.36). Other water harvesting facilities accounted for 6 percent of the total number of structures.

Erosion control bunds, terraces and water harvesting bunds together had 550,578 structures. This represented 85 percent of the total structures in the region. The remaining 15 percentages were shared among the rest of the erosion control methods mentioned above. Same and Rombo districts had 430,472 erosion control structures (66 percent of the total erosion structures in the region) (Chart 3.66).

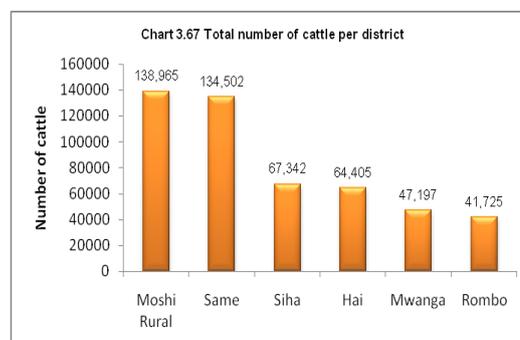

### 3.12 Livestock Results

#### 3.12.1 Cattle Production

Cattle were the dominant livestock type in the region followed by goats, sheep and pigs. The total number of cattle in the region was 494,135, representing 2.3 percent of the total cattle population on Tanzania Mainland.

##### 3.12.1.1 Cattle Population

The number of indigenous cattle in region was 321,171 (65 % of the total number of cattle in the region. The census results show that there were 73,788 of indigenous cattle rearing households in the region (51 % of the total households keeping cattle), This was equivalent to an average of 4 heads of cattle per

keeping-household. The district with the largest number of cattle was Moshi Rural District (138,965 cattle, 28% of the total cattle in the region). This was followed by Same (27.2%), Siha (13.6%), Hai (13%), Mwanga (9.6% and Rombo (8.4%) (Chart 3.67 and s 3.41, 3.42).

##### 3.12.1.2 Herd Size

Ninty two percent of the cattle-rearing households had herds of size 1-5 cattle with an average of two cattle per household. Herd sizes of 6-30 accounted for about 8 percent of all cattle in the region. Those with the herd size of 31-40 accounted for 0.2 percent, herds of size 41-50 constitute about 0.3 percent with an average number of 47 cattle per household. The

**Table 3.14 Number of Households Rearing Cattle, Number of Cattle and Average Number of Cattle per Household by Herd size During the 2007/08 Agricultural Year**

Herd Size	Cattle Rearing Households	%	Head of Cattle	Average Number of Cattle Per Household
1 - 5	133,363	91.6	287,336	2
6 - 10	7,047	4.8	51,866	7
11 - 15	1,773	1.2	22,356	13
16 - 20	1,627	1.1	28,567	18
21 - 30	697	0.5	17,360	25
31 - 40	239	0.2	8,288	35
41 - 50	441	0.3	20,706	47
51 - 60	88	0.1	5,193	59
61 -100	176	0.1	15,404	88
151+	176	0.1	37,058	211
Total	145,628	100	494,135	3

remaining range of herd sizes above 50 accounted for 0.1 percent of cattle rearing households at each herd size interval, with an average number of cattle per household ranging from 59 to 211. (Table 3.14).

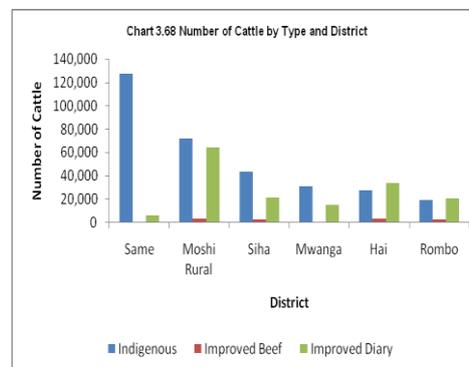

### 3.12.1.3 Cattle Population Trend

Cattle population in region decreased during the period of five years from 494,555 cattle in 2003 to 494,135 cattle in 2008. This trend depicts an overall annual negative growth rate of 0.2 percent. Same had the highest density of 52 cattle per square km.

### 3.12.1.4 Cattle Breeds

Improved cattle was 172,964 which constitute 35% of total cattle in region, out of which 10,980 was for beef breed and 161,984 was for diary breed. The diary cattle constituted 94 percent and the beef cattle 6 percent of the improved cattle in the region. The number of improved cattle increased from 143,364 in 2003 to 172,964 in 2007/08 at an annual growth rate of 3.8 percent

Indigenous cattle was 321,171 which was 65% of total cattle in the region (Chart 3.68).

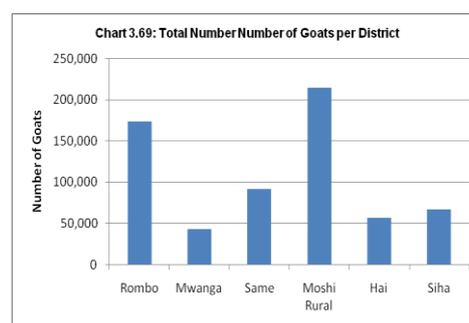

### 3.12.2. Goat Production

Goat rearing was the second most important livestock keeping activity in the region followed by sheep and pig rearing. In terms of total number of goats on the Mainland, region ranked 11th out of the 21 regions with 4 percent of the total goats on the Mainland.

#### 3.12.2.1 Goat Population

Goat-rearing-households in region was 112,088 (60 percent of all livestock keeping households in the region) with a total of 644,344 goats giving an average of 6 head of goats per goat-rearing-household. Moshi Rural had the largest number of goats (33.2% of all goats in the region), followed by Rombo (26.8%), Same (14.2%), Siha (10.4%), Hai (8.7%) and Mwanga (6.6%) of total goat population in the region. (Chart 3.69 and 3.43, 3.44).

#### 3.12.2.2 Goat Flock Size

Fifty eight percent of the goat-rearing households had flock size of 1-4 goats with an average of 3 goats per goat rearing household. Ninety four percent of total goat-rearing households had flock size of 1-14 goats and owned 72 percent of the total goats in the region resulting in an average of 4

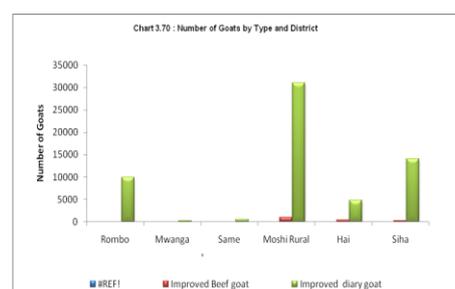

goats per goat-rearing households. Flock size ranging from 15-40+ was only three percent of goat rearing household (Table 3.15)

**Table 3.15: Number of Households rearing Goat, Head of Goat and Average Head per Household by Herd size During the 2007/08 Agricultural Year**

Herd Size	Goat Rearing Households		Herd of Goat	Average Number of Goats Per Household
	Number	%		
1 - 4	64,965	58	170,619	3
5 - 9	33,861	30	209,785	6
10 - 14	7,256	6	83,104	11
15 - 19	1,921	2	30,742	16
20 - 24	1,811	2	37,009	20
30 - 39	440	0	11,256	26
	541	0	16,606	31
40+	1,292	1	85,213	66
Total	112,088	100	644,334	3

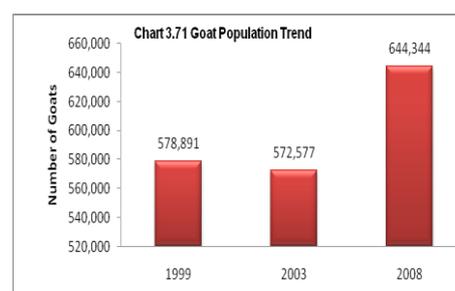

### 3.12.2.3 Goat Breeds

The region was dominated by the indigenous breeds that constituted 90.3 percent of the total goats in region (644,334 goats). Improved goats for beef and dairy constituted of 0.3 and 9.4 percent of total goats respectively. Census results indicated that Moshi Rural is the leading district with 1,056 and 31,093 improved goat for beef and dairy respectively. Same, Mwanga and Rombo districts reported no improved beef goat.

### 3.12.2.4 Goat Population Trend

Goat population growth was decreased by -2.27 percent from 578,891 in 1999 to 572,577 in year 2003. The overall annual growth rate of goat population from 2003 to 2008 was 2.4 percent. This positive trend implies five years of population increase from 572,577 in 2003 to 644,334 in 2008. The number of goats increased from 572,577 in 2003 at an estimated annual rate of 0.02 percent to 644,344 in 2008 (Chart 3.71). Rombo district had the highest density of goats 1474 flocks per square km.

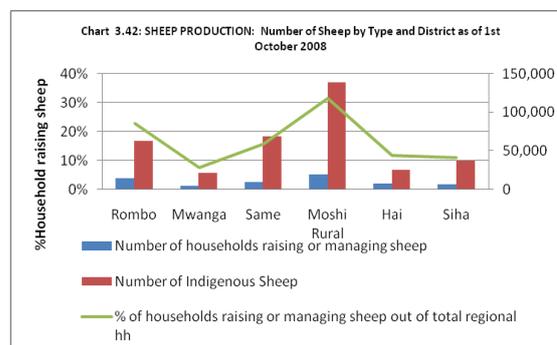

### 3.12.3. Sheep Production

Sheep rearing was the third important livestock keeping activity in region after cattle and goats. The region ranked 6 out of 21 Mainland regions and had 6.2 percent of all sheep on Tanzania Mainland.

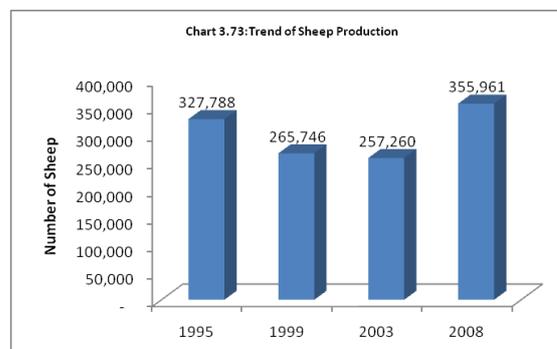

#### 3.12.3.1 Sheep Population

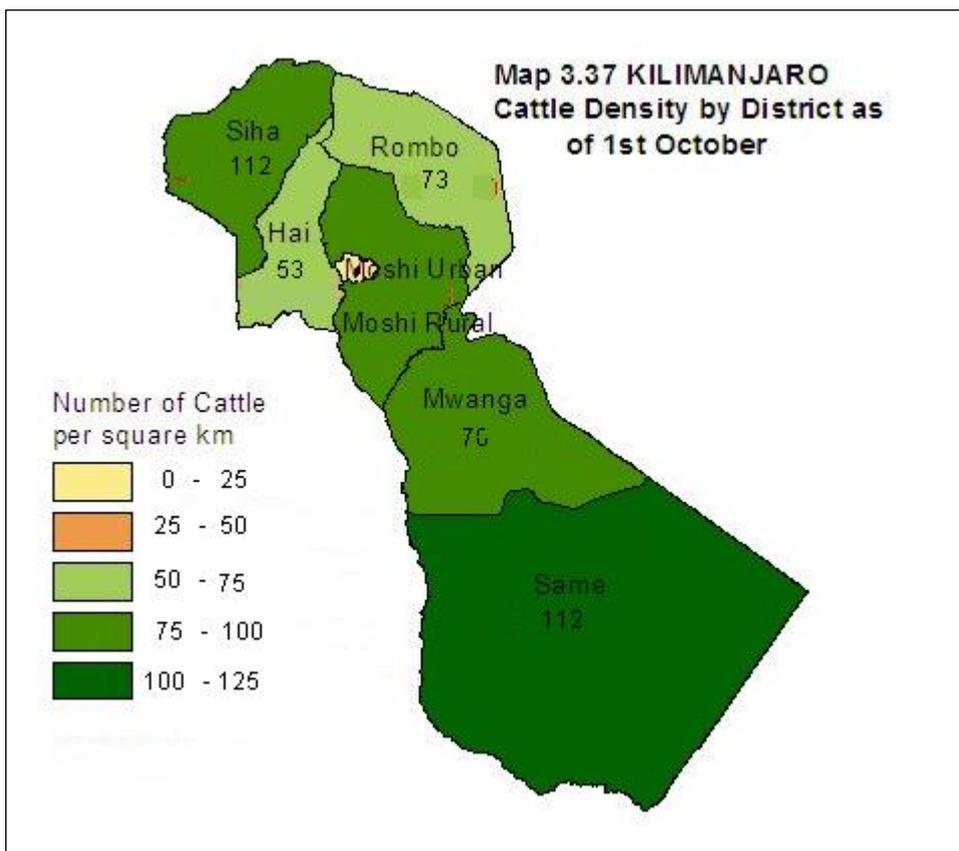

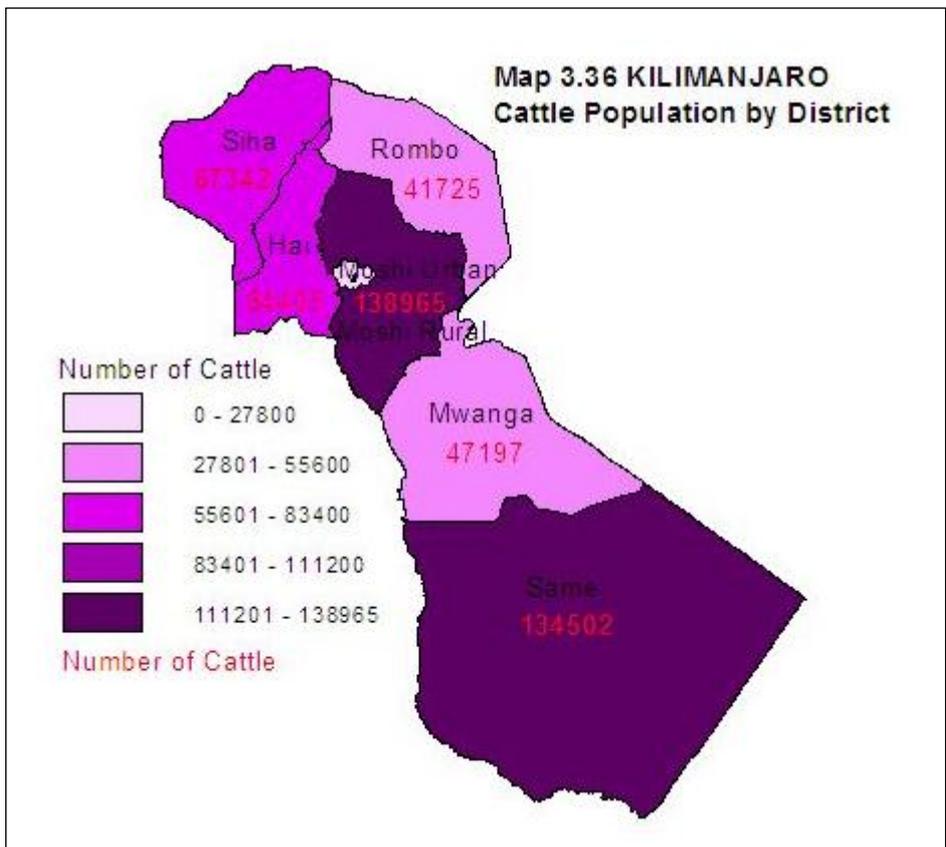

The number of sheep-rearing households was 63,608 (26% of all agricultural households in region) rearing 355,961 sheep, giving an average of 6 heads of sheep per sheep-rearing household. The district with the largest number of sheep was Moshi Rural with 138,965 sheep (39% of total sheep in region), followed by Same (69,099 sheep, 19.4%), Rombo (63,236 sheep, 17.8%), Siha (37,579 sheep, 10.6 %), Hai (25,779 sheep, 7.2 %) and Mwanga (21,303 sheep, 6%) (Chart 3.72, s 3.45, 3.46).

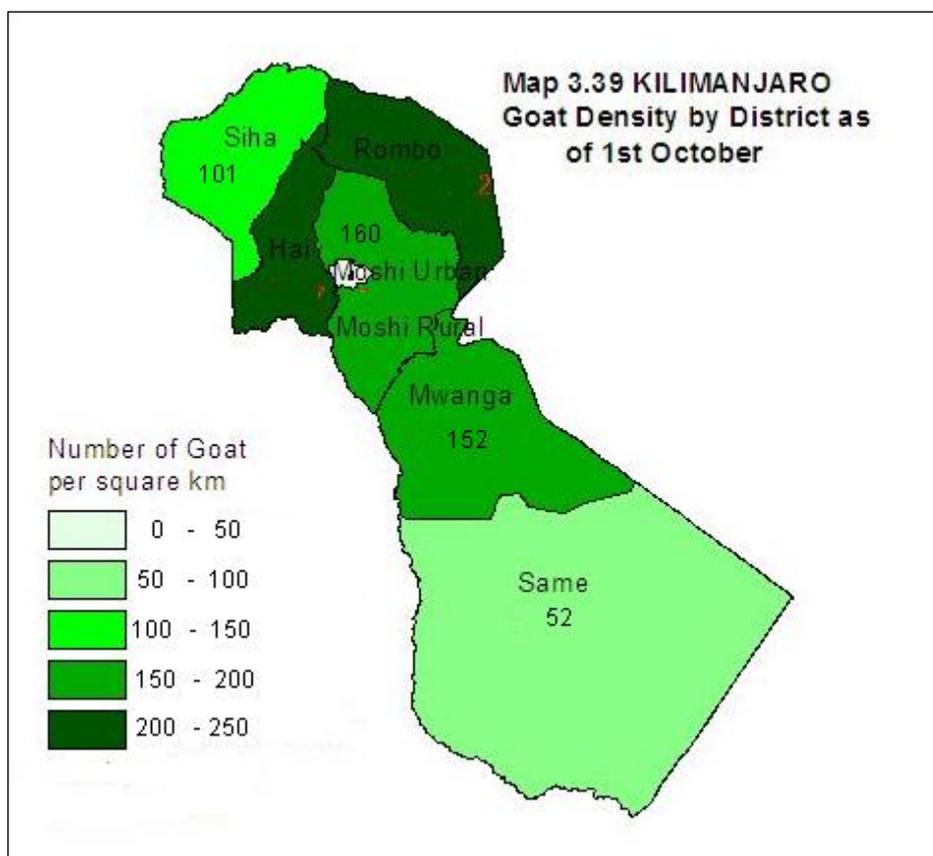

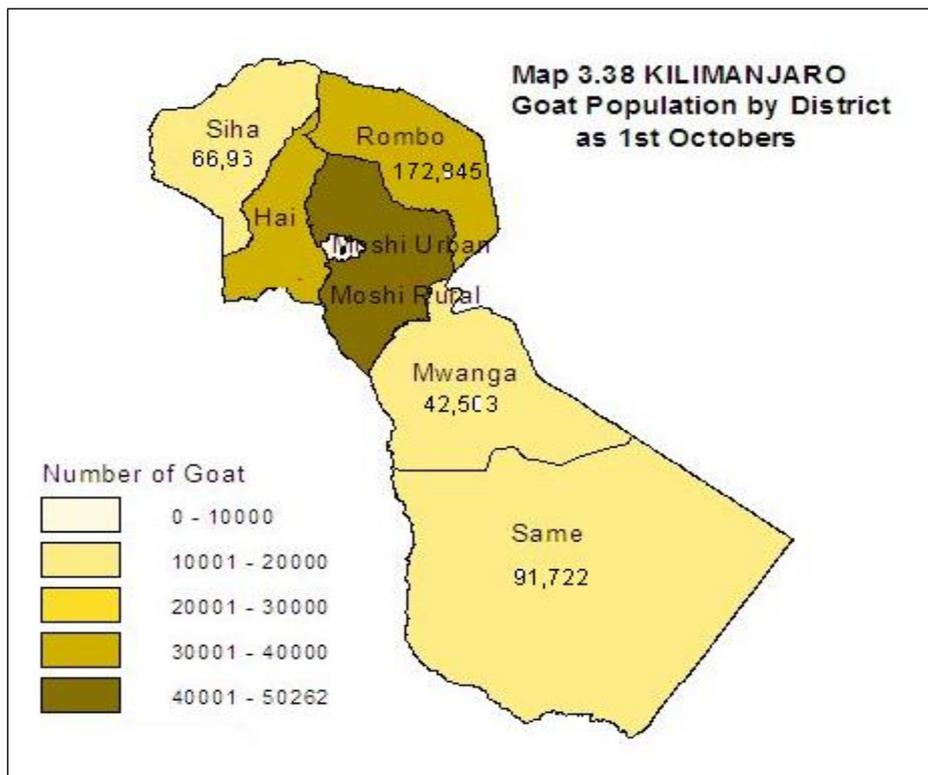

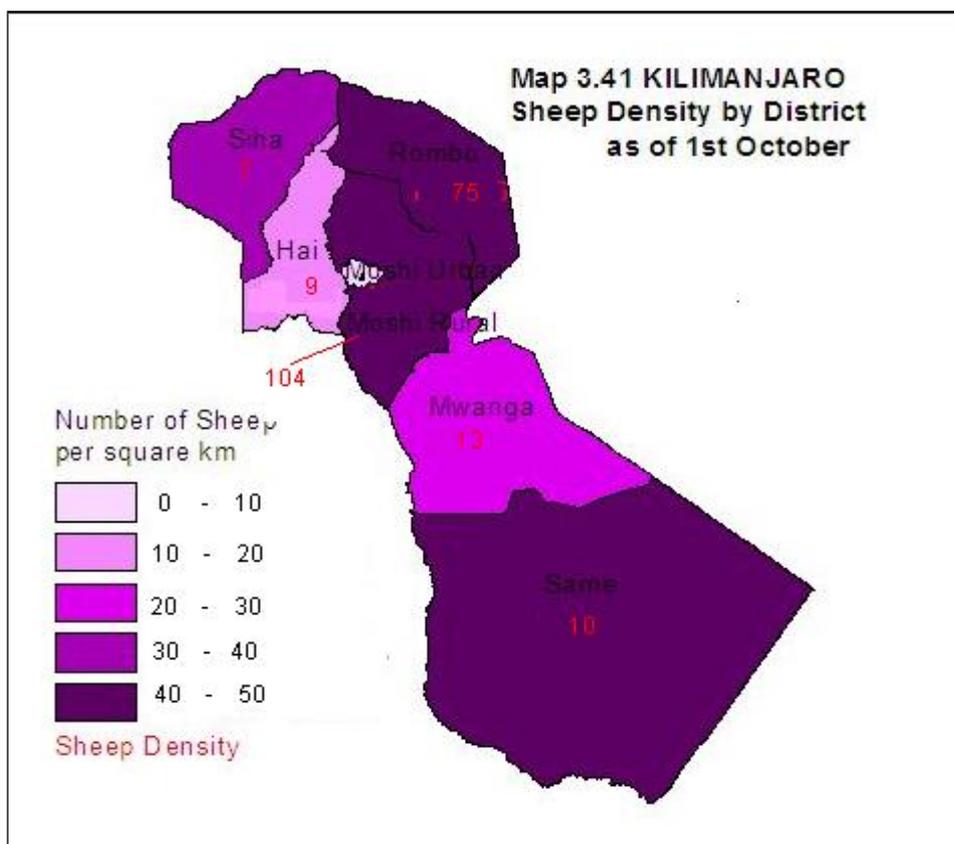

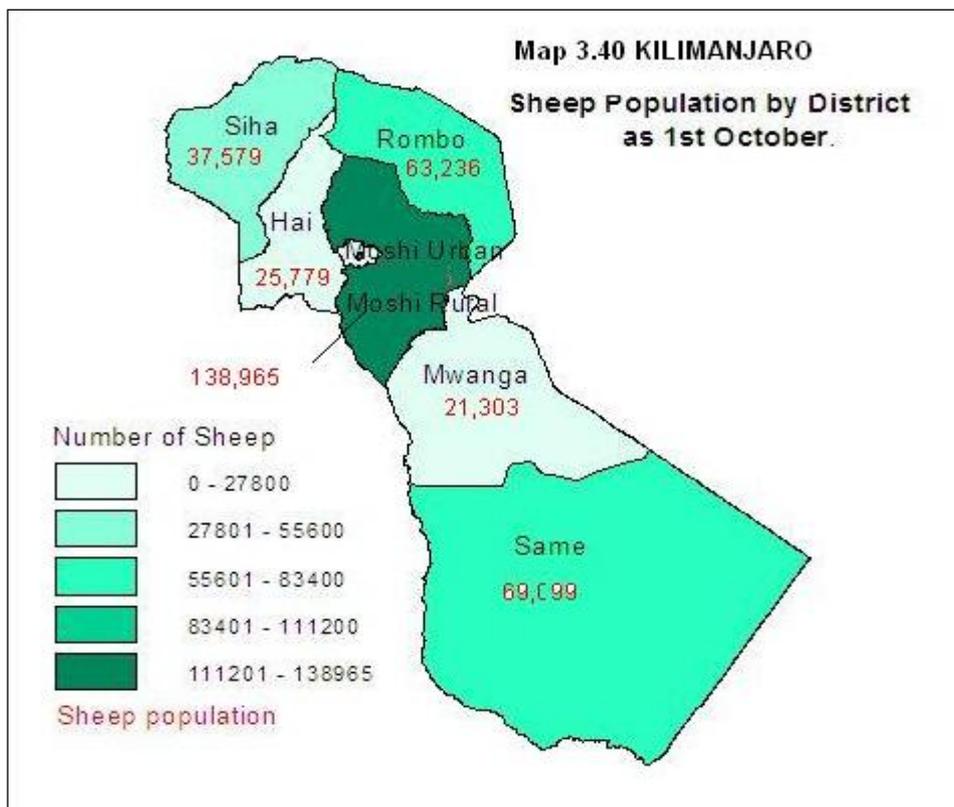

#### 3.12.3.2 Sheep Population Trend

The overall annual growth rate of the sheep population for 5 year period from 2003 to 2008 was estimated at 8 percent. The population increased from 257,260 sheep in 2003 to 355,961 sheep in 2008. Sheep population decreased at an annual rate of -5 from 327,788 in 1995 to 265,746 in 1999. As for density Moshi Rural had the highest of sheep with 249 flocks per square km ( Chart 3.73).

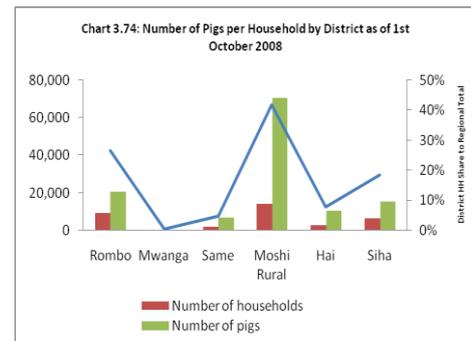

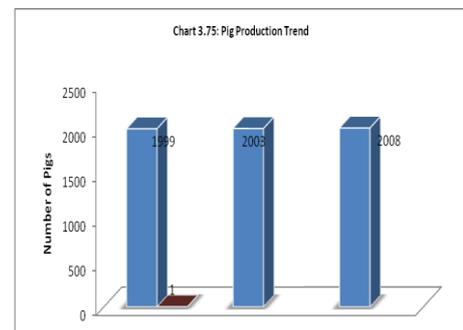

### 3.12.4. Pig Production

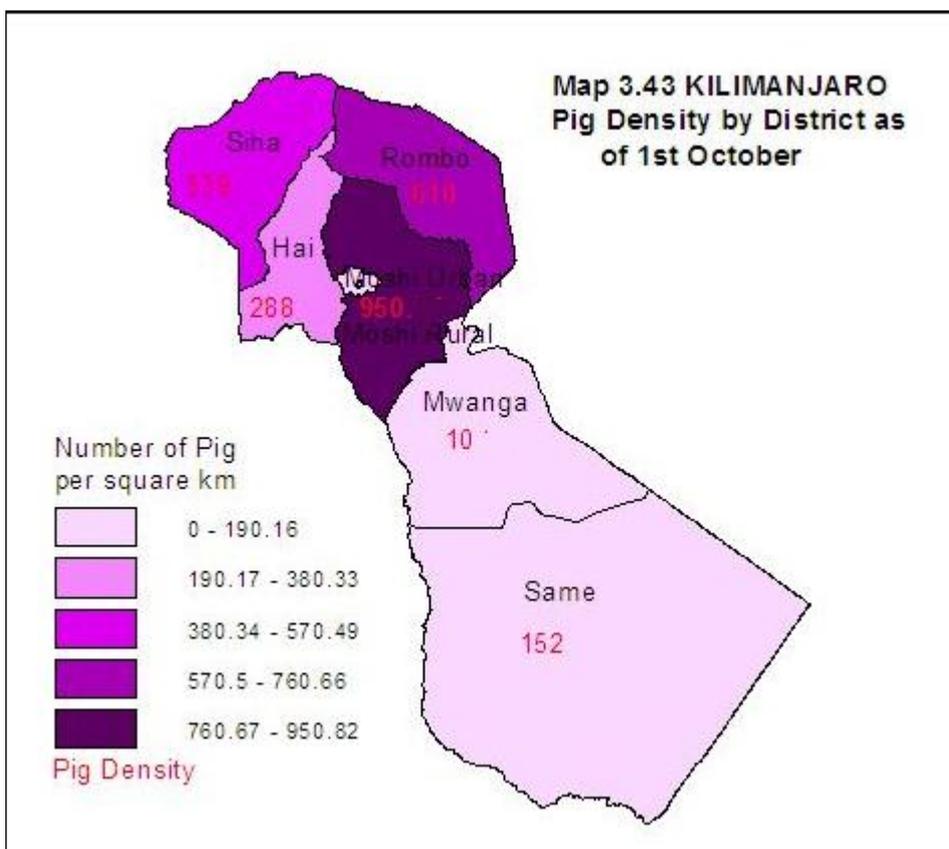

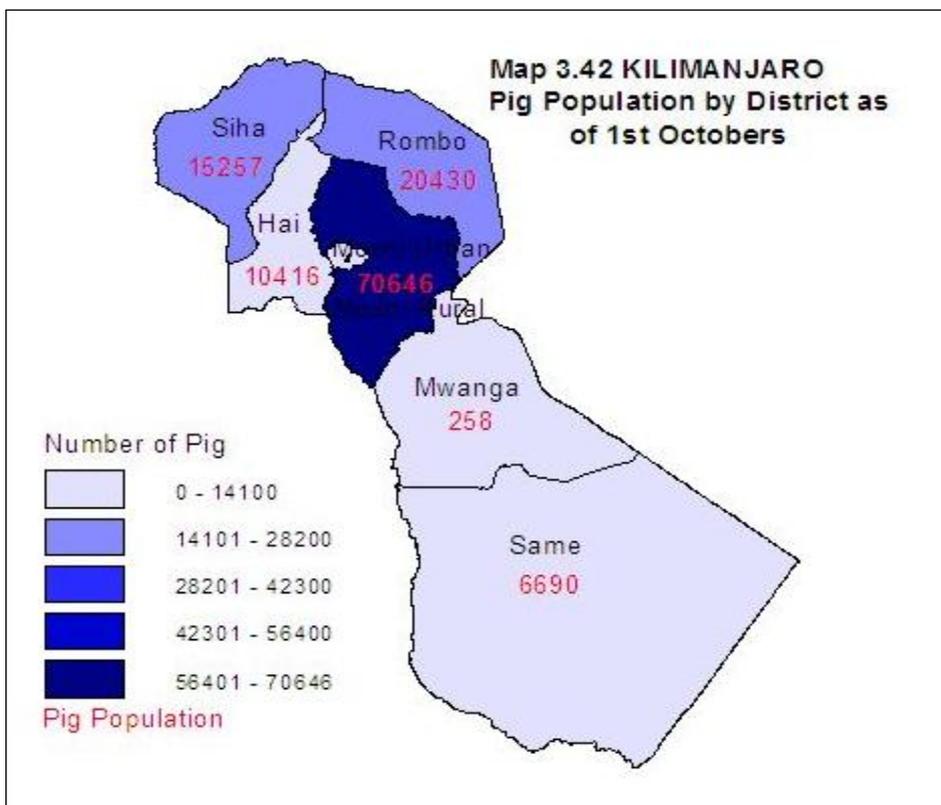

Pig production in the region ranks 4<sup>th</sup> out of 21 Mainland regions and has 8 percent of the Mainland total pigs. The number of pig-rearing agricultural households in region was 33826 (14% of the total agricultural households in the region) rearing 123,696 pigs. This gives an average of 4 pigs per pig-rearing household. The district with the largest number of pigs was Moshi Rural with 70,646 pigs (57.1% of the total pig population in the region) followed by Rombo (20,430 pigs, 17%), Siha (15,257 pigs, 12.3%), Hai (10,416 pigs, 8.4%), Same (6,690 pigs, 5.4%) and Mwanga (258 pig, 0.2%) (Chart 3.74 and 3.47, 2.48).

#### 3.12.4.1 Pig Population Trend

Pig population increased from 51,372 in 1999 to 155,070 in 2003 at a growth rate of 50 percent. The pig population decreased at a growth rate of -4 percent from 155,070 in 2003 to 123,696 in 2008. The highest density of pigs was found in Moshi Rural with 127 flocks per square km (Chart 3.75).

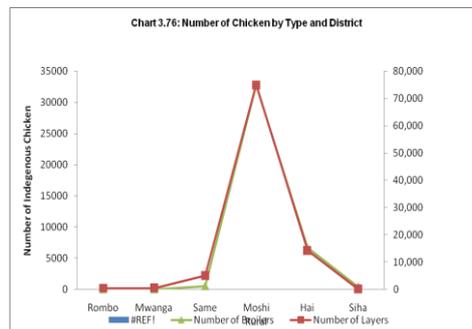

### 3.12.5 Chicken Production

The poultry sub-sector in region was dominated by chicken production. The region contributed 4.0 percent to the total chicken population on Tanzania Mainland.

#### 3.12.5.1 Chicken Population.

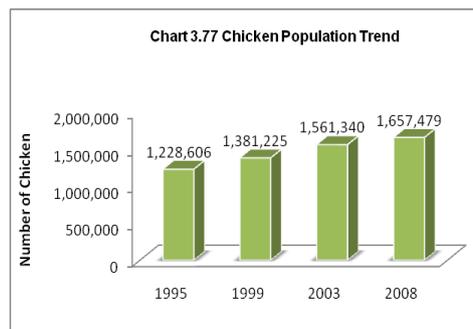

The number of households keeping chicken was 182,949 raising about 1,657,479 chickens. This gives an average of 9 chickens per chicken-rearing household. In terms of total number of chickens in the country, Out of the total chicken raised in the region 1,521,980 were indigenous chicken, accounting for 92% and 135,500 were improved chicken

accounting for 8%. Moshi Rural had the highest number of chicken raised in the region (617,620 chicken, 37.3), followed by Hai (241,215 chicken, 14.6%), Same (220,502 chicken, 13.3%), Rombo (209,706 chicken, 12.7, and Siha (209,155 chicken, 12.6%). Mwanga reported the smallest number of chicken raised in the region (159,283) accounting only 9.6 percent of all the chicken raised in the region (Chart 3.46, s 2.49, 3.50).

#### 3.12.5.2 Chicken Population Trend

In 1995 Chicken population increased from 1,228,606 to 1,381,225 in 1999 at a growth rate of 3.1 percent. The overall annual chicken population growth rate during the five-year period from 2003 to 2008 was 1.2 percent. The population increased at a rate of 0.01 percent from 1,561,340 in 2003 to 1,657,479 in 2008 Eighty six percent

of all chicken in region were of indigenous breed. The dominance of indigenous breed makes the population trend for the indigenous chicken more-or-less the same as that of the total chickens in the region (Chart 3.77).

### 3.12.5.3 Chicken Flock Size

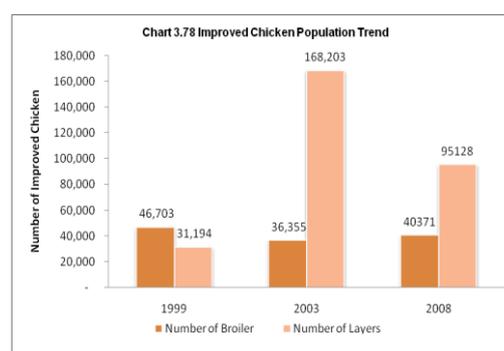

The results indicate that about 99.1 percent of all chicken-rearing households were keeping 1-49 chickens with an average of 8 chickens per holder. About 0.5 percent of holders were reported to be keeping the flock size of 50 to 99 chickens with an

Flock Size	Number of Households	Number of Chicken	Percent	Number of Chicken Per Household
1-49	181,298	1,491,939	12.2	8
50-99	1,000	54,187	1.8	54
100-299	589	92,595	0.6	157
300-499	63	18,758	0.3	300
<b>Total</b>	<b>182,949</b>	<b>1,657,479</b>	<b>15.0</b>	<b>9</b>

average of 54 chickens per holder. Only 0.3 percent of holders kept the flock sizes of more than 100 chickens at an average of 300 chickens per holder (Table 3.16).

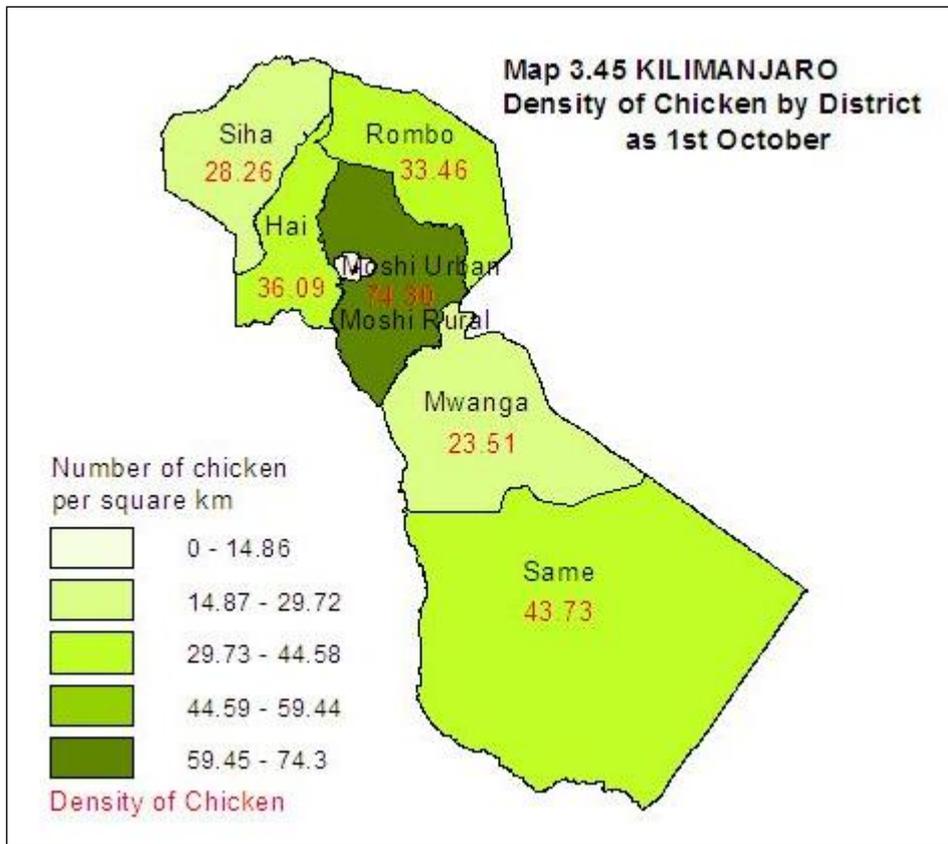

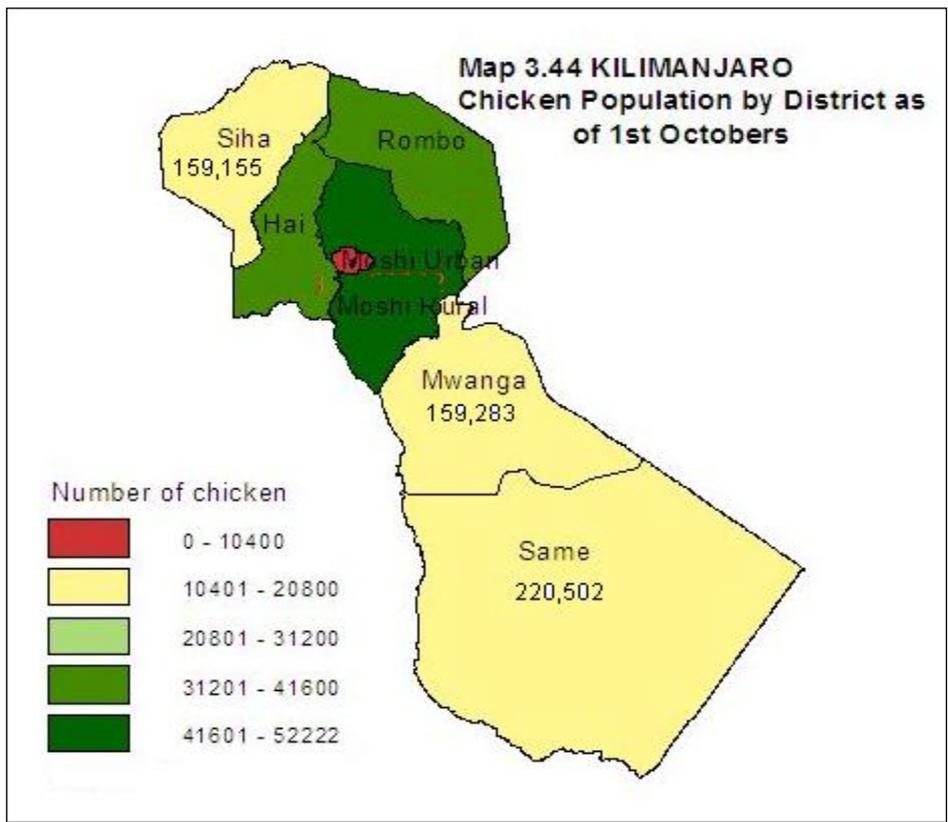

### 3.12.5.4 Improved Chickens (layers and broilers)

The District with largest number of improved chickens for both layers and broilers was moshi Rural 79.6% of the total number of improved chickens in the region), followed by Hai 15.4%, Same 4.1%, Mwanga 0.3%, Siha 0.3% and Rombo 0.2%. Rombo and Mwanga did report any improved chicken for broilers, and Siha did not report any improved chicken for layers. For the districts with both layers and broilers, layers was the leading type of improved chicken raised by chicken rearing households in these districts.

The overall annual Layers chicken population growth rate during the five years from 2003 to 2008 was -10.8percent. The population decreased at a rate of 0.11 percent from 2003 to 2008. (Chart 3.78)

The overall annual broilers chicken population growth rate during the five 2003 was 2.1 percent. The population increased at a rate of 0.02 percent from 2003 to 2008.

### 3.12.6. Other Livestock

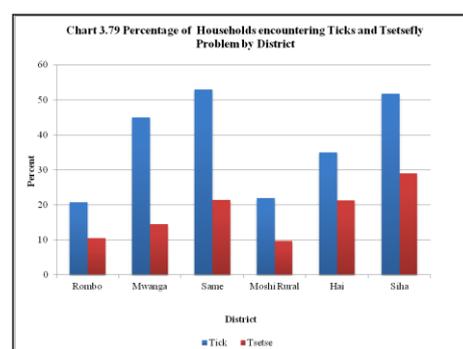

There were 26,537 ducks, 9,175 Guine pigs, 3,918 turkeys, 20,724 rabbits, 8,143 donkeys, and 35,981 dogs raised by rural agricultural households in region. Horses were not reported in region. The biggest number of ducks in the region was found in Moshi Rural district (15,652), followed by Mwanga (3,662), Same (3,521), Hai (1,910) and Rombo (1,730). Turkeys were reported in Moshi Rural, Rombo and Siha districts only. In addition to horses, Guine Pigs, Rabbits and donkeys were not reported in Mwanga district. Results showed that Moshi Rural district household had all other livestock except horses and donkey, (Table 3.17).

**Table 3.17 OTHER LIVESTOCK PRODUCTION: Number of Other Livestock by Type of Livestock and District as of 1st October 2008**

District	Ducks	Guine pigs	Turkeys	Rabbits	Donkeys	Horses	Dogs
Rombo	1,730	4,108	432	5,837	540	0	3,135
Mwanga	3,662	.0	0	0	0	0	2,940
Same	3,521	88	0	704	3,257	0	5,281
Moshi Rural	15,652	2,115	3,173	9,518	0	0	16,075
Hai	1,910	2,864	0	1,476	781	0	4,861
Siha	63	.	313	3,189	3,564	0	3,689
Total	26,537	9,175	3,918	20,724	8,143	0	35,981

### 3.12.7 Pest and Parasite Incidence and Control

The results indicate that 33 percent and 15 percent of the total livestock-keeping households reported to have encountered ticks and tsetse fly problems respectively. Chart 3.79 shows that there is a predominance of tick related diseases over tsetse related diseases (3.51).

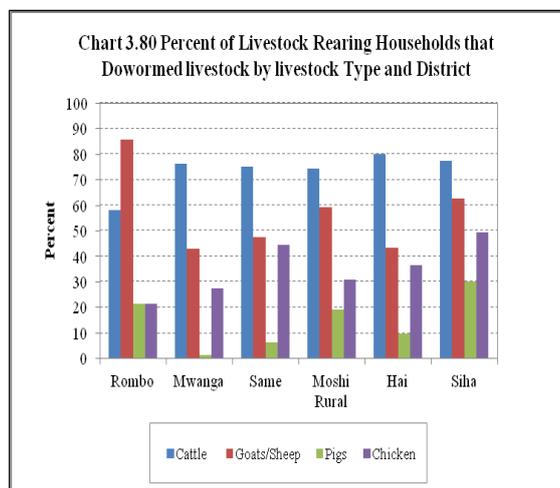

Incidences of both problems were highest in Same and Siha districts but lowest in Rombo and Moshi Rural districts. The most practiced method of controlling ticks was spraying with 27 percent of all livestock-rearing households in the region. Other methods used were smearing (6%), dipping (3%) and other traditional methods like hand picking (1%). However, 63 percent of livestock-keeping households did not use any of the tick control method.

The most common method used to control tsetse flies was spraying which was practiced by 12 percent of livestock-rearing households and dipping (6%), trapping (4%) and other traditional

methods (2%). However, 78 percent of the livestock rearing households did not use any of the four aforementioned methods.

### 3.12.7.1 Deworming

**Table 3.18 Number and Percent of Households deworming by type of livestock**

Type of livestock	Number of Households	Percentage
cattle	129,771	73
sheep/goats	106,851	60
pigs	28,943	16
chicken	59,511	33

Livestock rearing households dewormed all the types of their animals in the region. The number and percent of the households that dewormed cattle was 129,771 (73%), sheep/goats 106,851 (60%), pigs 28,943 (16%), and chicken 59,511 (33%) (Table 3.18).

In terms of deworming livestock by district Chart 3.80 indicates that highest percentages of livestock rearing households deworm cattle, followed by goats/sheep, chicken and lastly pigs. However, Rombo District had the highest percentage of livestock rearing households reported to have dewormed goats/sheep followed by cattle. Deworming of the remaining types of livestock was reported by an equal percentage of livestock rearing households in Rombo district (Chart 3.80).

### 3.12.8 Access to livestock Services

#### 3.12.8.1 Access to Livestock Extension Services

Livestock rearing household that received extension service was 163,746 representing 88 percent of total livestock rearing and 67.5 percent of total agricultural household in the region. The main source of extension service was the Government which saved a total number of 155,916 households (95.2%) followed by Newsletter/TV/Radio (21.3%), neighbour (15.1%), NGO (14.9%), cooperatives (9.5%) and Large scale farmers (4.6%). Type of extension services provided includes Proper livestock housing (121,089 household), livestock fattening (61,856), disease control (131,718),

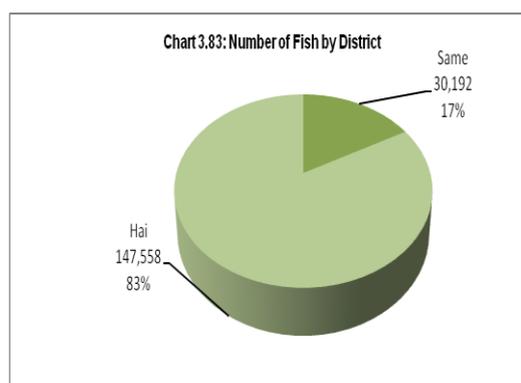

feeds and proper feeding (113,231), calf rearing (92,060), use of improved bulls (68,407), pasture establishment (59,540) and group formation (80,775).

### 3.12.9 Fish Farming

Fish farming was not a widely practised agricultural activity in region. The number of households involved in fish farming in region was 702 representing 0.3 percent of the total agricultural households in the region. Same and Hai were the only districts reported to have been practising fish farming.

#### 3.12.9.1 Fish production

The common type of fish being stocked in both districts is Tilapia and fish farming system used in both Same and Hai districts was dug out ponds making a total of 702 ponds in the region. Hai had the highest number of fish 147,558 weighing 694 kg and Same 30,192 fish with 5,898kg. (Chart 3.83)

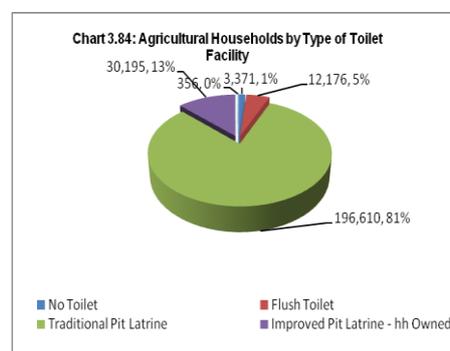

### 3.13. Poverty Indicators

The agricultural census collected data on poverty for the purpose of providing a base for tracking progress in poverty reduction strategies undertaken by the government.

#### 3.13.2 Types of Toilets

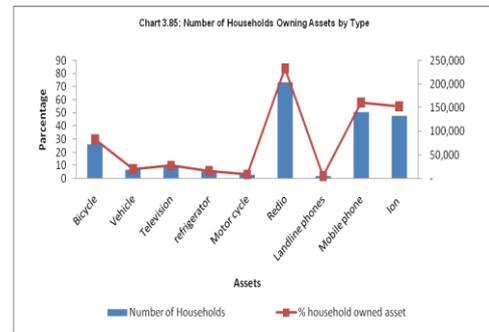

Eighty one percent (81%) of rural agricultural households (196,610 households) use traditional pit latrines, was followed by Improved pit latrine (30,195 households, 13%), flush toilets (12,176 households 5%), other types of latrines (356 households, 0.1%) and 3,371 households, (1%) had no toilet facilities (Chart 3.84)

#### 3.13.3 Household's Assets

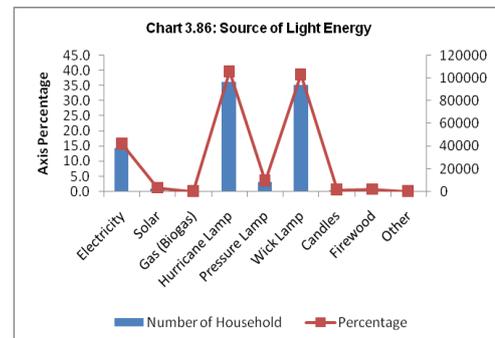

A total number of 203,194 of rural agricultural households in region reported to have owned Radio/Music Systems which was 84% of the agriculture households in the region. Landlines and Mobile phones owned by 146,263 households, 60% for both types of assets followed by Pressing

Iron (132,662householdsh, 55%), bicycle (72,841 households, 30%), wheelbarrows (61,095 households, 25.2%), Television/Video (24,407 households, 10.1%), vehicles (18,287 households, 8%), Refrigerators ( 14,267 households, 6%) and Motor Cycle (7,870 households, 3.2%) (Chart 3.85)

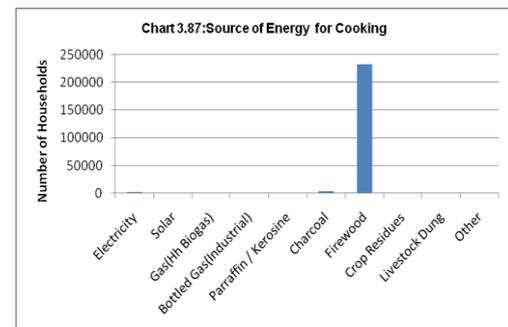

### 3.13.4 Sources of Lighting Energy

Hurricane lamp is the most common source of lighting energy in the region with 40 percent of the total rural households using this source of energy followed by wick lamp (39%), mains electricity (16%) and pressure lamp (4%), Solar (1.2%). The remaining sources of lighting were minor. (Chart 3.86)

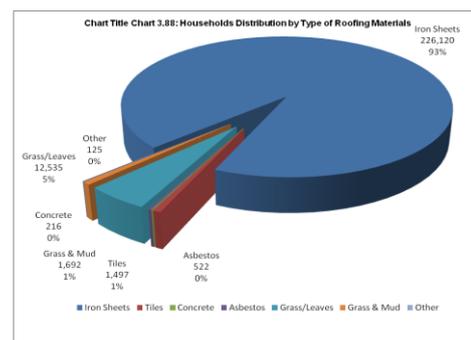

### 3.13.5 Sources of Energy for Cooking

The most prevalent source of energy for cooking was firewood, which was used by 96 percent of all rural agricultural households in region. This was followed by charcoal (2%) and mains electricity (1.1%). The rest of energy sources accounted for less than 1 percent each. These were crop residue (0.8%), solar energy (0.1%), Gas (Biogas) (0.2%), bottled gas (0.3%) paraffin/kerosene (0.2%), (Chart 3.87).

### 3.13.6 Roofing Materials

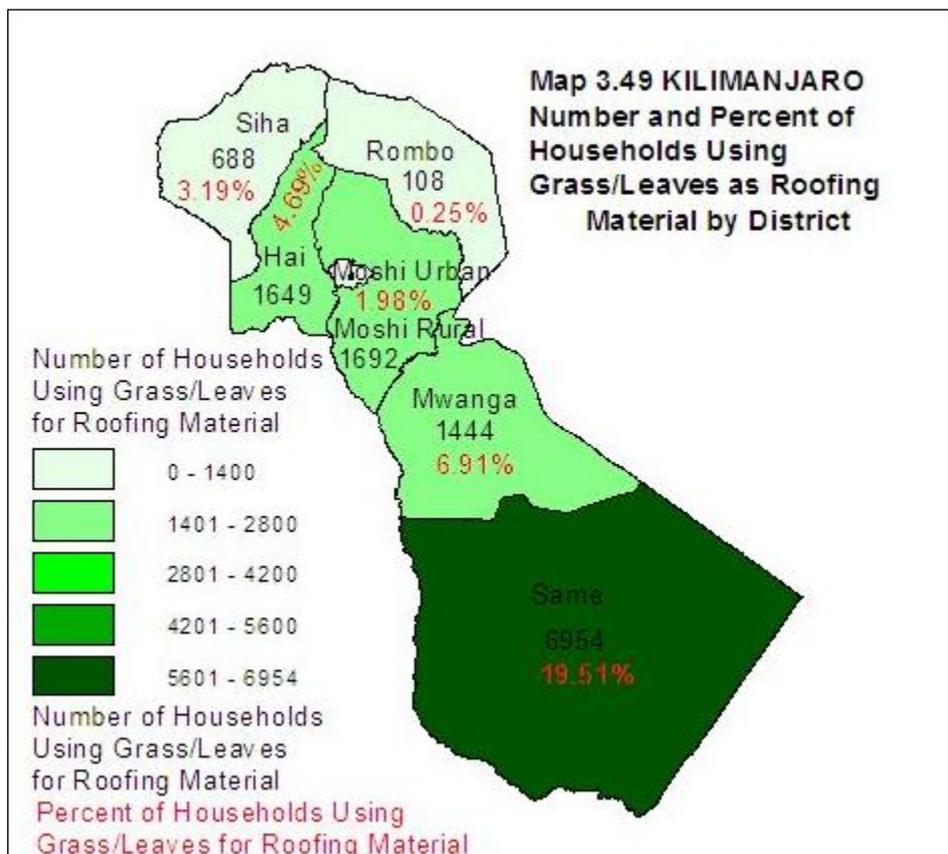

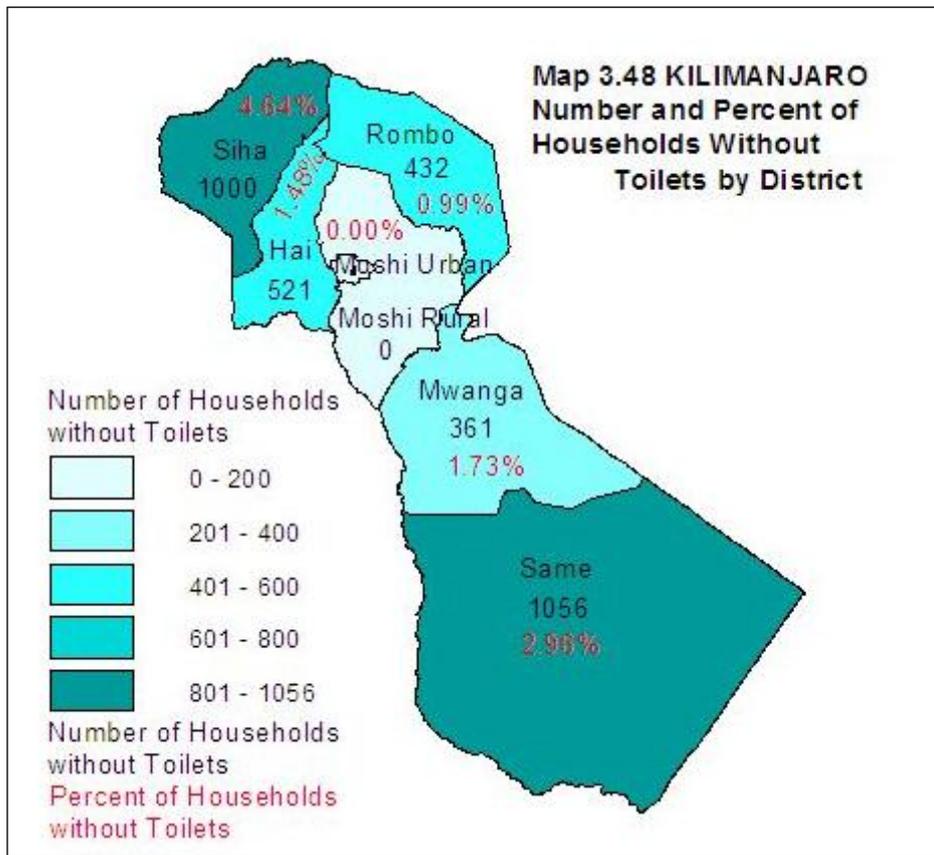

The roofing material commonly used for was Iron sheets and it was used by 93 percent of the rural agricultural households. This was followed by grass/leaves (5%), grass / mud (0.7%), tiles (0.6%), asbestos (0.2%) and Concrete and Other each 0.1 percent.(Chart 3.88). Moshi Rural district had the highest percentage of households with Iron sheet roofing

(37%) followed by Rombo districts (19%), Hai (15%), and Same (12%) (Table 3.19 and 3.57)

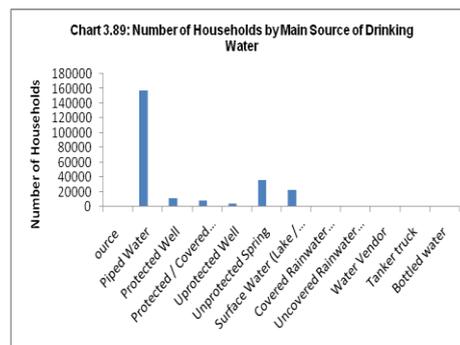

**Table 3.19: Distribution of Households By Type of Roofing Material**

District	Roofing Materials							Total Households
	Iron Sheets	Tiles	Concrete	Asbestos	Grass/Leaves	Grass & Mud	Other	
Rombo	42,914	432	216	108	108	0	0	43,779
Mwanga	19,240	103	0	52	1,444	52	0	20,890
Same	27,728	264	0	88	6,954	616	0	35,650
Moshi Rural	83,125	635	0	212	1,692	0	0	85,663
Hai	33,418	0	0	0	1,649	87	0	35,154
Siha	19,696	63	0	63	688	938	125	21,572
Total	226,120	1,497	216	522	12,535	1,692	125	242,708
%	93.2	0.6	0.1	0.2	5.2	0.7	0.1	100.0

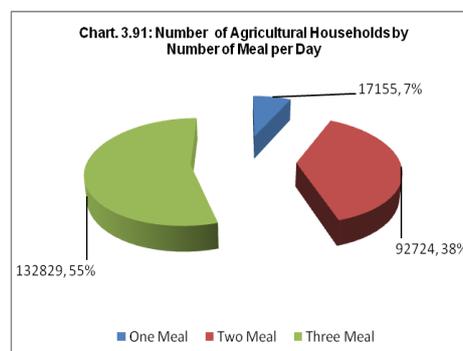

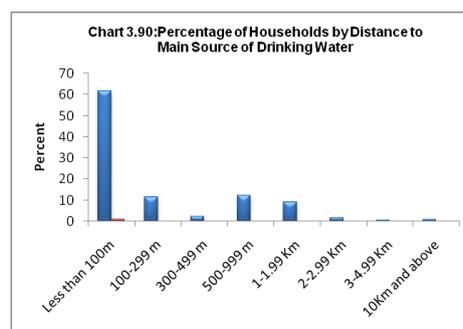

### 3.13.7 Access to Drinking Water

The main source of drinking water for rural agricultural households in region was piped water (65% during dry season). This is followed by unprotected spring (15%), surface water-Lake/dam/rivers/streams-9 %, protected well (5%), protected/ covered spring (3%), unprotected well (2%), water vendor (1% of households during dry season). The rest of the sources accounted for less than 1 percent each (Chart 3.89)

About 62 percent of the rural agricultural households in region obtained drinking water within a distance of less than a hundred metres during wet season and. 60 percent of the households during the dry season. Eleven and twelve percents of agricultural households obtained drinking water between 100 and 299 metres during wet and dry seasons respectively. a Twelve and twenty percent of agricultural households obtained drinking water between 500 and 999 metres during wet and dry seasons respectively metres. The most common distance from the source of drinking water was less 100 meters during wet and dry seasons. During both wet and dry`seasons the most common time used was less than ten minutes.

### 3.13.8 Food Consumption Pattern

#### 3.13.8.1 Number of Meals per Day

The results indicate that the majority of households in region normally have 3 meals per day (132,829 meals, 55 percent of the households in the region). This is followed by 2 meals per day (38 percent) and 1 meal per day (7 percent). There was no information on households reporting having 4 meals per day (Chart 3.91).

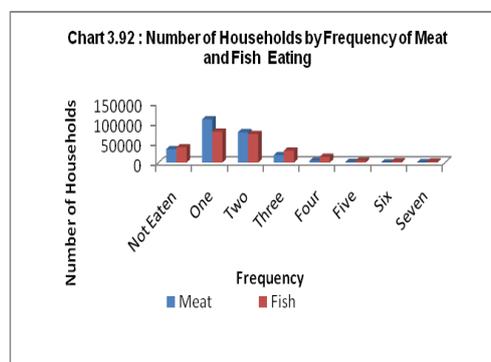

**Table 3.20: Number of Agricultural Households Reporting Number of meals the household normally has per day by District, 2007/08 Agricultural Year**

District	One	Two	Three	Total Households
Rombo	5,513	21,835	16,431	43,779
Mwanga	309	3,456	17,125	20,890
Same	704	7,042	27,904	35,650
Moshi Rural	8,249	36,592	40,822	85,663
Hai	1,128	13,107	20,919	35,154

Moshi Rural district had the largest number of households eating Three, Two and One, meals per day, this is attributed to the proportion size of the population where Moshi Rural district stands above the rest in population size in the region. Same had the second highest number of agricultural household taking three meals per day, followed by Hai. Rombo had the second highest number of the households taking Two and One meal per day (Table 3.20 and 3.58).

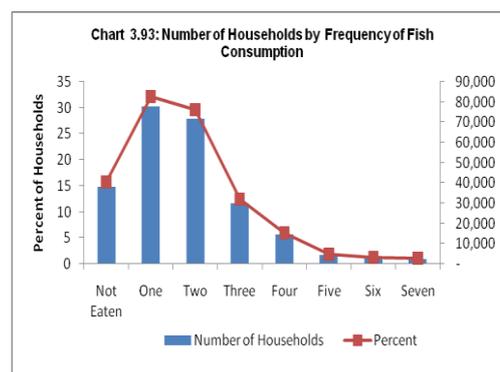

### 3.13.8.2 Meat and Fish Consumption Frequency

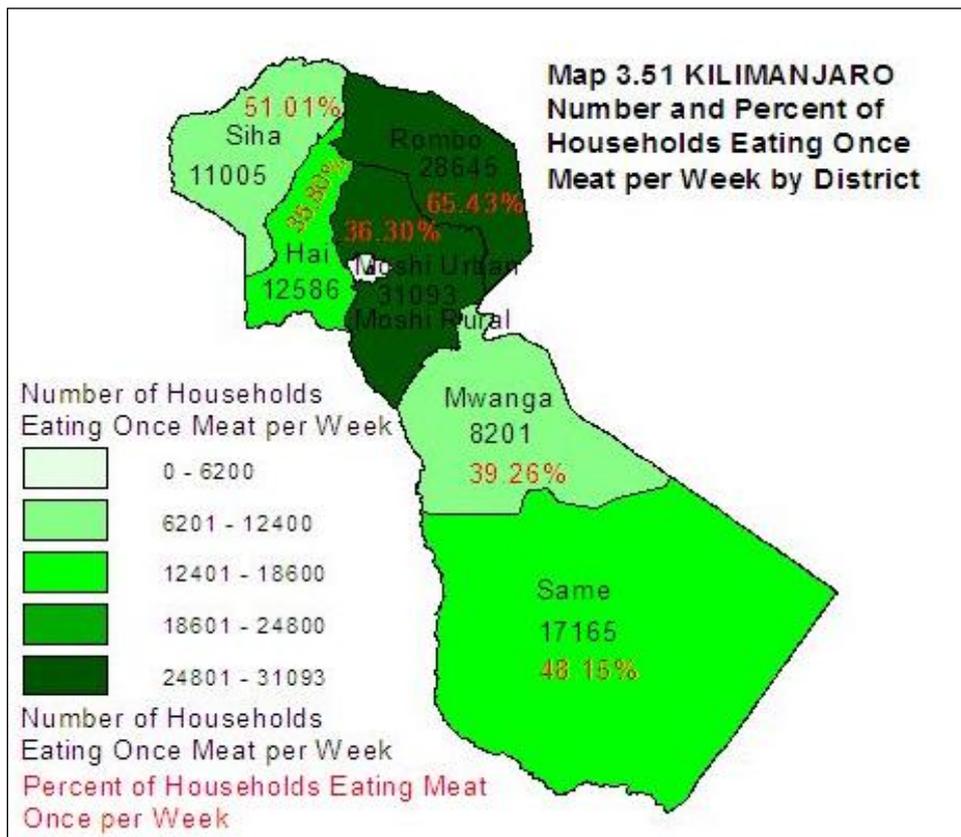

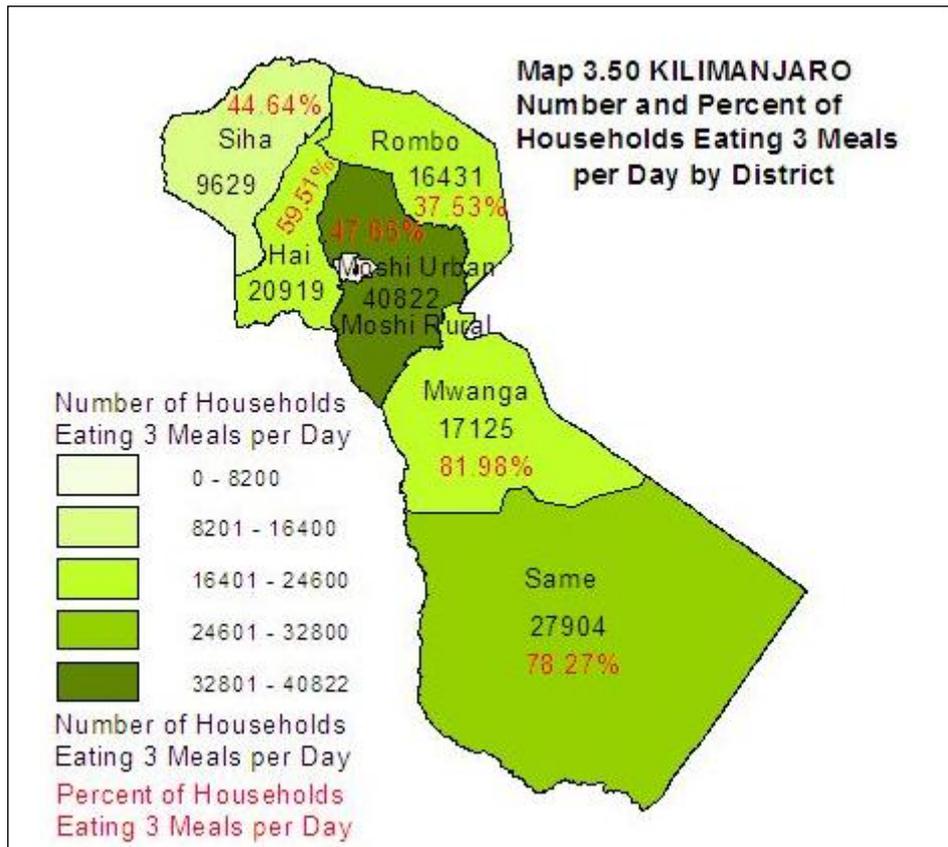

The number of agricultural households that consumed meat during the week preceding the census was 208,959.89 (86% of the agricultural households in region) with 108,695 households (45 % of those who consumed meat) consuming meat only once during the respective week. This was followed by those who had meat twice during the week 76,274 (31%) and those who had meat thrice during the week 18,466 (8%). Very few households (2 percent) had meat four or more times during the respective week. Those reported to have had meat more than four times during the week preceding the census were less than 1 percent. About 14 percent of the agricultural households in region did not eat meat during the week preceding the census (Chart 3.92 and 3.58).

### 3.13.8.3 Fish Consumption Frequencies

The number of agricultural households that consumed fish during the week preceding the census was 204,488 (84% of the total agricultural households in region) with 78,038 households (32 % of those who consumed fish) consuming fish once during the respective week. This was followed by those who had fish two times (71,897 households, 12%), three times (30,066 households, 12%), and four times (14,536 households, 6%). In general, those reported to be eating fish more than four times during the respective period in region were less than three percent of the agricultural households that ate fish in the region. About 16 percent of the agricultural households in region did not eat fish during the week preceding the census (Chart 3.93 and 3.59, 3.60). This number is slightly higher than that reported not to be eating meat during the week preceding the census period; indicating that the consumption of meat is slightly higher than that of fish in region.

---

## Evaluation and Conclusion

### 4.0 Regional Profile

profile covers a wide range of information on geography, population, socio-economic parameters social services, economic infrastructure and the productive sectors. Such data are vital for policy makers and other users.

The region was named after the famous snow-covered Mount , with 19,344 feet above sea level. The region is located on the eastern part of Tanzania Mainland. It lies south of the equator between latitudes 2<sup>0</sup>25' and 4<sup>0</sup>15'. It has a common border with Kenya in the North and Tanga region to the south east and shares borders to the south and west with Arusha region.

has a land area of 180,171 hectares under crop production and has a relatively high number of crop growing households compared to other regions. Comparatively, Moshi Rural district had the largest planted area of 47,098 (26%) hectares, followed by Same 38,362 hectares (21%), Rombo 28,021 hectares (16%) and Hai 24,931 hectares (14%). The two districts Siha and Mwanga had the least planted area of 21,383 (12%) and 20,377 (11%) hectares respectively. The region had a land area per crop growing household of 1.1 hectares and almost all available land was utilized.

The region has short and long rainy seasons with the long rainy season being slightly more important. Matchets and Hand hoes were the most widely used tools used for land clearing, applied by 99 and 98 percents respectively of agricultural households doing land clearing in . Tractor was also used by a large number of households 14,442 (6%) for soil preparation, followed by tractor ploughing 8,985 (3.7%).

has a relatively high percent of permanent crops, some of which are in mono-crop stands and the remainder in mixed annual/permanent crop. Cereal production in is not important and it has one of the smallest planted areas of maize. Paddy, sorghum, cassava and groundnuts which used to be less important have now begun to emerge in the region, although some districts such as Rombo still did not record any production of some cereal crops such as paddy. There is moderate to low cultivation of beans and vegetables in the region.

Canals are the most common source of irrigation water and the region has the highest percent of households using canals. Rivers are also used. Practically all irrigation water was obtained by gravity and very few households use buckets/watering cans. Most cultivation was done by hand

with very few households using oxen. However, it is one of the six regions in the country that has some cultivation by tractor. has one of the highest percent of the total planted area with fertilizer application and slightly more farm yard manure than inorganic fertilizer is applied. It has the large percentage of total planted area with both insecticide application and fungicides.

The region has a large percent of households using air tight drums for storage and this is the most common method in the region, however this is closely followed by sacks/open drums. Very little storage is done in locally made traditional structures. has only a moderate number of households selling crops, and has one of the highest number and percent of smallholder households receiving extension advice in the country.

Most of the crop growing households also keep livestock. The region keeps a moderate number of livestock production. It has the highest number of improved breed of cattle (for both beef and diary). It has the largest number of households with erosion control/water harvesting bunds in Tanzania with terraces and erosion control bunds being the most common.

This section highlights the characteristics of each district and compares them in relation to population, main crops and livestock, production and productivity, access to services and resources and levels of poverty.

## **4.1 District Profiles**

### **4.1.1 Rombo**

Rombo district had the second largest number of agricultural households involved in rural agriculture in the region. Most smallholders are involved in crop farming only, followed by crop and livestock.

Permanent crop farming was the most important livelihood activity for small holder households, followed by annual crop farming and livestock keeping. The district is one of the highest percent of households with off-farm activities.

Compared with other districts in the region, Rombo has the lowest percent of female headed households (16%). The average size of household members in the district is 4.95 members per household, it has the highest household members compared to 4.70, an average for the region. Rombo has a comparatively low literacy rate among smallholder households due to low level of school attendance in the district. It is the second district with large number of households with

University and other tertiary education. The district was among the districts having the lowest area with certificates of lease.

Different annual crops and vegetables are planted in Rombo in both short and long rainy seasons. Among the cereal crops grown in Rombo, maize was leading with more males headed households in both seasons. Other cereal crop grown in Rombo was finger millets. Paddy and Sorghum were not reported in the district. Other significant annual crops grown in the district include beans, cowpeas, sunflower and groundnuts.

In both short and long rainy season, almost all households in the district stored their crops. Rombo district was the third with largest number of households storing crops during short rainy season and the fourth during long rainy season. Cereals were mostly stored in sacks/open drums, airtight drums, locally and improved locally made structures.

Use of organic fertilizer was very important in the district, and it was applied to an area of 6,595 hectares (2.7%) of the total planted area in the region. Organic fertilizer was applied on a larger area during short rainy season than in the long rainy season. Inorganic fertilizer was applied on an area of 3,605 (1.5%) hectares in Rombo. A larger area was applied with an input during short rainy season than during long rainy season.

Out of the total area planted with crops in the region, an area of 10,327 hectares (4.3%) were planted using improved seeds in Rombo. Larger area was planted using the input in short rainy season than in long rainy season.

The district had a moderate area planted using insecticides, the input being applied on a larger area during short rainy season. It had the largest number of households using insecticides in the region.

Rombo had a moderate number of households that sold their produce, with 17,728 (7.3%) of the total number of crop planting households.

Marketing problems were reported in the district, especially for pulses and cereals. The common problems include open market price too low, transport costs too high, lack of market information and lack of transport.

Matchet and handhoe are the most widely used farming tools used for land clearing, applied by 99.0 and 97.3 percent respectively of agricultural households doing land clearing in Rombo. Other

agricultural equipment used in order of importance include hand sprayer, tractors, Grater, Chipper, Oil Press and Oil Mill; and tractor plough.

In Rombo, agriculture credit was important with a largest number of households 540 (55.6) of the total households receiving agriculture credits in the region. Most credits were through family friends or relatives and private individuals.

In Rombo district, the majority (27, 564) of households reported to walk less than 100 meters to the main source of drinking water during the dry season. Piped water was the main source of drinking water. Other sources were unprotected spring and surface water (lake/dam/river).

In Rombo, the majority (38, 050) of households reported the traditional pit latrines as the major type of toilet used in the district. The other type was improved pit latrines (4,216). The main source of income was the sale of food crops. Other sources were other casual cash earnings, sales of cash crops, sales of livestock and business income.

The total number of households rearing cattle was the third in Rombo district, with 52% of the total agriculture households in the district. The total number of households rearing goats was the highest in Rombo district, with 84.9% of the total agriculture households in the district.

#### **4.1.2 Mwanga**

Mwanga had the highest percent of female headed households (30%). The average size of household members in the district is 4.6 members per household, relatively lower than the average of 4.70, an average for the region. Mwanga has the lowest number of household members who can read and write Swahili, and was the fourth in the region with the number of households with University and other tertiary education. Mwanga had the lowest number of households involved in agriculture. Mwanga had the smallest number of households involved in agriculture. The district ranks third with large areas with certificates of land ownership.

A number of different annual crops and vegetables were planted in Mwanga although the district was among the districts with small numbers of households that planted annual crops and vegetables. Most households growing annual crops and vegetables were male headed in both seasons. The major crops grown include maize, paddy, beans, cabbage, cassava, cowpeas and coco yams. Few households planted sunflower and tomatoes in Mwanga district.

Most households in the district stored their crops during short and long rainy seasons. Mwanga district was among the districts with lowest number of households storing crops during short rainy and long rainy seasons. Cereals were mostly stored in sacks/open drums, airtight drums, locally and improved locally made structures.

In Mwanga, the use of organic fertilizer was applied to an area of 2,324 hectares (1.0%) of the total planted area in the region. Organic fertilizer was applied on a larger area during short rainy season than in the long rainy season. Inorganic fertilizer was applied on area of 1,362 (0.6%) hectares in Mwanga. A larger area was applied with an input during short rainy season than during long rainy season.

Out of the total area planted with crops in the region, an area of 8,894 hectares (3.7%) were planted using improved seeds in Mwanga. Larger area was planted using the input in short rainy season than in long rainy season.

Mwanga had the smallest area planted using insecticides, the input being applied on a more or less same area during long and short rainy seasons. The district had the lowest number of households using insecticides in the region.

Marketing problems were reported in the district, especially for pulses, cereals and roots and tubers. The common problems include open market price too low, crop market too far, transport costs too high and lack of transport.

Piped water was the main source of drinking water. Other sources were protected wells and unprotected spring.

In Mwanga, the majority (18, 157) of households reported the traditional pit latrines as the major type of toilet used in the district. The other type was improved pit latrine (2,012). Mwanga reported a significant number of households that consumed fish in all seven days during the week. The main source of income was the sale of food crops. The other sources were other casual cash earnings.

#### **4.1.3 Same**

Compared with other districts in the region, Same is the third with 21 percent of female headed households. The average size of household members in the district is 4.89 members per household, above the average of 4.70, an average for the region. Same has a moderate literacy rate among smallholder households and was the third in with a moderate number of household members who

can read and write and is among the districts with a small number of households with University and other tertiary education. Same was the third with large numbers of rural households involved in agriculture in the region. The district was the second in the region with large areas with certificates of land ownership.

Different annual crops and vegetables were planted in Same and the district was among the districts with the small number of households that planted annual crops and vegetables. The major crops grown in Same include maize, paddy, beans, sweet potatoes, Irish potatoes, coco yams, cowpeas, tomatoes, cabbage, onions and amaranths. Few households planted sunflower and groundnuts. It was the only district growing mung beans in the region, planted on an area of 36 hectares with the yield of 1tonne per hectare.

In both short and long rainy season, almost all households in the district stored their crops. Same district was the second with largest number of households storing crops in the region. The crops stored include cereals, pulses and roots and tubers. These were mostly stored in sacks/open drums, airtight drums, locally and improved locally made structures.

The use of organic fertilizer was very important in Same district, and it was applied to an area of 3,246 hectares (2.9%) of the total planted area in the region. Organic fertilizer was applied on a larger area during short rainy season than in the long rainy season. Inorganic fertilizer was applied on area of 3,643 (1.5%) hectares in Same. A larger area was applied with an input during short rainy season than during long rainy season.

Out of the total area planted with crops in the region, an area of 7,670 hectares (3.2%) were planted using improved seeds in Same. Larger area was planted using the input in short rainy season than in long rainy season. Local seeds were mainly used in Same district, and the largest area was planted during short rainy season. An area of 30,202 (12%) of the total area planted with crops in the region was planted using local seeds.

Same had the second largest area that was irrigated. The larger area was irrigated during the short rainy season and only a small part during the long rainy season. The district was the second with the largest number of households that sold their produce, with 28,168 (11.7%) of the total number of crop planting households in the region.

The common market problems in Same were open market price too low, crop market too far and lack of transport. There were serious market problems for cereals, pulses and fruits and vegetables.

Same had a significant number of households reporting the most common agricultural constraints. These are poor soil cultivation equipment 4,225 (11.9%), Access to land 3,081 (8.6%), Access to improved seeds 3,081 (8.6%).

In Same district, the majority (11, 883) of households reported to walk less than 100 meters to the main source of drinking water during the dry season.

Unprotected spring was the main source of drinking water in Same. Other sources were piped water, surface water (lake/dam/river), protected/ covered spring.

In Same, the majority (30, 192) of households reported the traditional pit latrine as the major type of toilet used in the district. The district ranks second with the large number of households using this type of toilet. The other type was improved pit latrine (3,785). Same reported the second highest number of households (27,904, 11.5%) that normally take three meals per day. The main source of income was the sale of food crops. The other sources were other casual cash earnings.

#### **4.1.4 Moshi Rural**

Moshi Rural had the largest number of rural households involved in agriculture. The district is one of the districts with the lowest percent of female headed households (18%). The average size of household members in the district is 4.65 members per household, relatively lower than the average of 4.70 members in the household, an average for the region. Moshi Rural has the highest literacy rate in the region, and is the first district with large number of households with University and other tertiary education. The district is leading by having the largest number (99.1%) of the total households involved in agriculture.

The largest number of households having or owning certificates of land ownership is in Moshi Rural district. It had the largest area owned under customary law, bought area, rented and area share-cropped.

Moshi Rural is among the districts with large numbers of households growing annual crops and vegetables. Like all the districts in the region, maize was mainly planted in both short and long

rainy seasons. The district was leading by having the largest number of households growing maize, largest area planted and largest quantity harvested.

Moshi Rural had the largest number of households storing crops. Cereals were stored in both short and long rainy seasons. Following the order of importance, the methods widely used to store crops were airtight drums, sacks/open drums and locally and improved locally made structures respectively.

Moshi Rural had the highest area planted using organic fertilizer. The input was applied to an area of 7,137 hectares (2.9%) of the total planted area in the region. Like many other districts in the region, organic fertilizer was applied on a larger area during short rainy season than in the long rainy season. Inorganic fertilizer was applied on area of 16,043 (6.6%) hectares in Moshi Rural. The district had the largest area planted using inorganic fertilizer, and a larger area was applied with an input during long rainy season than during short rainy season.

Out of the total area planted with crops in the region, an area of 21,133 hectares (8.7%) were planted using improved seeds in Moshi Rural. The district had the largest area planted using improved seeds, most of it being used during the long rainy season. Moshi Rural was the second with the largest area planted using local seeds. About 22,547 (9.3%) hectares were planted using local seeds out of the total area planted with crops in the region.

Moshi Rural had the largest area planted using insecticides, the input being applied on a larger area during long rainy season. It was the second with the largest number of households using insecticides in the region.

The district was the second first with the largest number of households that sold their produce, with 36,380 (15.1%) of the total number of crop planting households in the region. Marketing problems that were reported in Moshi Rural district were open market price too low, transport costs too high and crop market too far.

Matchet and handhoe are the most widely used farming tools used for land clearing, applied by 99.3 and 97.5 percent respectively of agricultural households doing land clearing in Moshi Rural district. Other agricultural equipment used in order of importance include hand sprayer, tractors, Grater, shellers/threshers and tractor plough.

In Moshi Rural, agriculture credit was important with a large number of households 423 (50.0) of the total households receiving agriculture credits in the region. Most credits were through family friends or relatives and savings and credit.

In Moshi Rural district, the majority (60, 281) of households reported to walk less than 100 meters to the main source of drinking water during the dry season.

Piped water was the main source of drinking water. Other sources were unprotected spring, surface water (lake/dam/river) and protected well.

In Moshi Rural, the majority (66, 415) of households reported the traditional pit latrine as the major type of toilet used in the district. The district had the largest number of households using this type of toilet. The other type was improved pit latrine (10,364).

Moshi Rural reported the highest number of households (40,822, 16.8%) that normally take three meals per day. It was the only district that reported to have consumed meat seven times during the week. The main source of income was the sale of food crops. The other sources were wages and salaries in cash and other casual cash earnings.

The total number of households rearing cattle was the second in Moshi Rural district, with 62% of the total agriculture households in the district. The total number of households rearing goats was the second in Rombo district, with 48.9% of the total agriculture households in the district.

#### **4.1.5 Hai**

Compared with other districts in the region, Hai is the second with a large percent of female headed households (22%). The average size of household members in the district is 4.45 members per household, relatively lower than the average of 4.70 members, an average for the region. Hai ranks third with low literacy rate among smallholder households due to low level of school attendance in the district. However Hai is the third district with large number of households with University and other tertiary education. It ranks fourth with large numbers of rural households involved in agriculture in the region. Small areas had certificates of lease in the district.

The district was the second with the largest number of households growing maize as well as the largest number of households growing paddy in the region. It had the highest yield of 2.8 tonnes of

paddy per hectare. Other crops grown include beans, green grams, sunflower and amaranths. Comparatively, smaller areas were planted with cabbage and tomatoes.

Hai was the second district with smallest number of households storing crops. Cereals were stored in both short and long rainy seasons. Following the order of importance, the methods widely used to store crops were airtight drums, sacks/open drums and locally made traditional structures respectively. Pulses and roots and tubers were among the crops that were stored during short and long rainy seasons.

Hai had a moderate area planted using organic fertilizer. The input was applied to an area of 1,172 hectares (0.9%) of the total planted area in the region. Unlike other districts in the region, organic fertilizer was applied on a slightly larger area during long rainy season than in the short rainy season. Inorganic fertilizer was applied on area of 12,128 (5.0%) hectares in Hai. It was the second with the largest area planted using inorganic fertilizer. Larger area was applied with the input during long rainy season.

Out of the total area planted with crops in the region, an area of 13,393 hectares (5.5%) were planted using improved seeds in Hai. The district was the second largest with area planted using improved seeds, most of it being used during the long rainy season.

Hai ranks third with a large area that was irrigated during short and long rainy seasons. A larger area was irrigated during long rainy season. The district was the third with the largest number of households that sold their produce, with 25,779 (10.7%) of the total number of crop planting households in the region. Marketing problems that were reported in Hai district were open market price too low, transport costs too high, Government regulatory problems and lack of transport.

Moshi Rural had a significant number of households reporting the most common agricultural constraints. These are access to land 27,285 (31.9%), poor soil cultivation equipment 4,865 (5.7%), irrigation facilities 4,442 (5.2%) and access to improved seeds 3,173 (3.7%).

In Hai district, the majority (23, 436) of households reported to walk less than 100 meters to the main source of drinking water during the dry season.

Piped water was the main source of drinking water. Other sources were unprotected spring and surface water (lake/dam/river). The majority (29, 164) of households reported the traditional pit latrine as the major type of toilet used in the Hai. The other type was improved pit latrine (4,253).

Hai reported the third highest number of households (20,919, 8.6%) that normally take three meals per day. The main source of income was the sale of food crops. The other sources were other casual cash earnings, sales of livestock products and sales of cash crops.

#### **4.1.6 Siha**

Compared with other districts in the region, Siha ranks fourth with the lowest percent of female headed households (19%). The average size of household members in the district is 4.66 members per household, relatively lower than the average of 4.70, an average for the region. Siha has the lowest literacy rate among smallholder households due to low level of school attendance in the district, and no household members were reported to have attained University or other tertiary education. Siha was one of the districts having small numbers of households involved in agriculture and had the smallest area leased or having certificates of lease.

Maize was the major crop grown in Siha. The district ranks third with the largest number of households growing maize in the region. Other crops were beans, sunflower, irish potatoes and paddy, with a moderate yield of 1.5 tonnes of paddy per hectare. Cabbage was the most important vegetable planted in Siha. Comparatively, fewer households were involved in growing the crop on the largest area planted with cabbage in the region, giving the yield of 12 tonnes of cabbage per hectare. Raddish and Turmeric are not common crop in other districts and are only grown in Siha. Other common vegetables grown in small areas include okra, field peas, amaranths and chillies.

Siha had the smallest number of households storing crops. Cereals were stored in both short and long rainy seasons. Following the order of importance, the methods widely used to store crops were airtight drums, sacks/open drums, locally made traditional structures and improved locally made structures respectively. Pulses and roots and tubers were among the crops that were stored during short long rainy seasons.

Siha had a smallest area planted using organic fertilizer. The input was applied to an area of 1,156 hectares (0.6%) of the total planted area in the region. In this district, organic fertilizer was significantly applied on a larger area during long rainy season than in the short rainy season. Inorganic fertilizer was applied on area of 6,503 (2.7%) hectares in Siha. It was the third with the

---

largest area planted using inorganic fertilizer. Larger area was applied with the input during long rainy season.

The district was the third with largest area planted using improved seeds, most of the input was used during the long rainy season. Out of the total area planted with crops in the region, an area of 10,743 hectares (4.4%) were planted using improved seeds in Siha.

Siha had the smallest area of irrigated land, and had the least number of households that used irrigation in both seasons.

Piped water was the main source of drinking water. Other sources were surface water (lake/dam/river) and unprotected spring. The majority (14, 631) of households reported the traditional pit latrine as the major type of toilet used in the Siha. The other type was improved pit latrine (5,565).

In this district, the main source of income was the sale of food crops. The other sources were sales of cash crops, business income and other casual cash earnings.

The total number of households rearing cattle was highest in Siha district, with 65% of the total agriculture households in the district. The total number of households rearing goats was the third in Siha district, with 47.8% of the total agriculture households in the district.

---

**5. APPENDICES**

Appendix I Tabulation List.....101

Appendix II Tables.....119

Appendix III Questionnaires.....323

**APPENDIX I TABULATION LIST**

2.1.1	TYPE OF AGRICULTURE HOUSEHOLD: Number of Households by type of Household and District during 2007/08 Agriculture year.....	119
2.1.2	TYPE OF AGRICULTURE HH: Number of Agriculture Households by type of Holding by District during 2007/08 Agriculture year.....	119
2.1.3	TYPE OF AGRICULTURE HOUSEHOLD: Number of Agriculture Households By Type and Size of Holding, 2007/08 Agricultural Year - KILIMANJARO.....	119
HOUSEHOLDS DEMOGRAPHY .....		120
3.1	Number of Heads of Agricultural Households by sex of head and District, 2007/08 Agricultural Year.....	121
3.2:	Number of Household Members classified by District and Sex .....	121
3.3	HOUSEHOLDS DEMOGRAPHYS: Number of Agricultural Household Members By Sex and Age Group, 2007/08 Agricultural Year, Kilimanjaro.....	121
3.6	Number of Heads of Agricultural Households by Marital Status, sex of head and District, 2007/08 Agricultural Year.....	122
3.7	Number of Heads of Agricultural Households by Survival of Female Parent, sex of head and District, 2007/08 Agricultural Year .....	123
3.8	Number of Heads of Agricultural Households by Survival of Male Parent, sex of head and District, 2007/08 Agricultural Year .....	124
3.9	HOUSEHOLD DEMOGRAPHYS: Number of Household Members Who Can Read and Write languages by type of language and District .....	125
3.11	Number of Agricultural Household Members reporting Literacy levels by Sex of Member and District, 2007/08 Agricultural Year .....	127
3.12	Number of heads of Agricultural households reporting Literacy levels by Sex of Member and District, 2007/08 Agricultural Year .....	127
3.13	HOUSEHOLD DEMOGRAPHYS: Number of Household Members by Education Status and District .....	128
3.14	Number of Heads of Agricultural Households by Education Status, sex of head and District, 2007/08 Agricultural Year .....	128

3.14	Number of Heads of Agricultural Households by Education Status, sex of head and District, 2007/08 Agricultural Year .....	128
3.16	HOUSEHOLDS DEMOGRAPHYS: Number of Agricultural Household Members By Level of involvement in Farming Activivty and District, 2007/08 Agricultural Year .....	129
3.17	HOUSEHOLDS DEMOGRAPHYS: Number of Agricultural Household Members By Main Activity and District, 2007/08 Agricultural Year .....	129
LAND OWNERSHIP AND LAND USE .....		131
4.1	LAND ACCESS/OWNERSHIP: Number of Farming households by type of land Ownership/Tenure and District for the 2007/08 agriculture year .....	132
4.2	LAND ACCESS/OWNERSHIP: Area of land (ha) by Ownership/ Tenure and District for the 2007/08 agriculture year .....	132
4.3:	LAND SUFFICIENCY: Number of Agriculture Households by Whether All Land Available to the Household Was Used during 2007/08 agriculture year and Region .....	133
4.4	LAND SUFFICIENCY: Number of Agriculture Households by Whether they Consider Having Sufficient Land for the Household and Region during 2007/08 agriculture year .....	133
4.5	LAND ACCESS/OWNERSHIP/TENURE: Number of Agriculture Households By Whether Female Members of the Household Own or Have Cusomary Right to Land By Region during 2007/08 Agriculture year.....	133
4.6	LAND USE: Number of Agriculture Households by Type of Land Use and District for the 2007/08 agriculture year .....	134
4.6	LAND USE: Number of Agriculture Households by Type of Land Use and District for the 2007/08 agriculture year .....	134
4.7	LAND USE: Area of Land (ha) by land use and District for the 2007/08 agriculture year .....	135
CROP OWNERSHIP .....		136
5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	137
5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	138

5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	139
5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	140
5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	141
5.1.1b	Number of Households and Planted Area by Crop and Sex of Household members owning most of the crop for the agriculture year 2007/08 Long Season-KILIMANJARO DISTRICT .....	142
CROP PRODUCTION BY REGION .....		143
5.6	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agricultural Households, Area Planted (ha) and Quantity Harvested (tonnes) during Short Rainy SEASON Agricultural Year 2007/08 .....	144
5.6	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agricultural Households, Area Planted (ha) and Quantity Harvested (tonnes) during Long Rainy SEASON Agricultural Year 2007/08 .....	149
5.9	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Crop Growing Households and Area Planted (ha) by Season and District .....	155
5.10	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of crop growing Households Planting Crops by Season and District .....	155
5.11	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	156
5.13	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	157
5.13	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	158
5.13	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	159

5.13	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	160
5.13	TOTAL ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Agriculture Households by Area Planted (ha) and crop for the agriculture year 2007/08 Short and Long Season - KILIMANJARO .....	161
	CROP STORAGE .....	162
5.17	CROP STORAGE: Number of households Storing Crops Season and District.....	163
5.18	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season - KILIMANJARO.....	164
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	166
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	167
5.20	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season, KILIMANJARO .....	168
5.21	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season, KILIMANJARO.....	170
5.21	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season, KILIMANJARO.....	171
5.18	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season - KILIMANJARO .....	172
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	174
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	175
5.18	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season - KILIMANJARO .....	176
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	178
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - KILIMANJARO .....	179
5.18	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season - Hai.....	180

5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - Hai.....	182
5.19	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season - Hai.....	183
5.22	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Short Rainy Season, Hai.....	184
5.23	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season, Siha.....	186
5.23	CROP STORAGE: Number of households storing Crops by Method of Storage and Crop Type Long Rainy Season, Siha.....	187
	INPUT USE .....	188
5.24:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Organic Fertiliser Use and District - SHORT RAINY SEASON .....	189
5.25:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Organic Fertiliser Use and District - LONG RAINY SEASON .....	189
5.26:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Inorganic Fertiliser Use and District - SHORT RAINY SEASON .....	189
5.27:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Inorganic Fertiliser Use and District - LONG RAINY SEASON .....	189
5.28:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Fungicide Use and District - Short Rainy Season .....	190
5.29:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Fungicide Use and District - Long Rainy Season .....	190
5.30 :	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Herbicide Use and District - Short Rainy Season .....	190
5.31:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Herbicide Use and District - Long Rainy Season .....	190

5.32:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Improved Seed Use and District - Short Rainy Season .....	191
5.33:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Improved Seed Use and District - Long Rainy Season .....	191
5.34	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of crop Growing Households and Planted Area (hectare) by Local Seed Use and District; 2007/08 Agriculture Year - SHORT Rainy Season .....	191
5.35	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of crop Growing Households and Planted Area (hectare) by Local Seed Use and District; 2007/08 Agriculture Year - LONG Rainy Season .....	191
5.36:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Insecticides Use by District - SHORT RAINY SEASON .....	192
5.37:	ANNUAL CROP & VEGETABLE PRODUCTION: Number of Households and Planted Area by Insecticides Use and District - Long Rainy Season .....	192
5.38:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Irrigation Use and District -SHORT RAINY SEASON .....	192
5.39:	ANNUAL CROP AND VEGETABLE PRODUCTION: Number of Households and Planted Area by Irrigation Use and District -LONG RAINY SEASON .....	192
MARKETING.....		193
5.40	MARKETING: Number of Crop Producing households reporting Selling agricultural produce during 2007/08 by District and Season .....	194
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	195
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	196
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON .....	197

5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop -KILIMANJARO, LONG RAINY SEASON.....	198
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON .....	199
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON .....	200
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop -KILIMANJARO, LONG RAINY SEASON.....	202
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop – KILIMANJARO - SHORT RAINY SEASON.....	203
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	204
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON .....	205
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON .....	206
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	207
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	208
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON .....	209
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON .....	210

5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	211
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO - SHORT RAINY SEASON.....	212
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO, LONG RAINY SEASON.....	213
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop -KILIMANJARO, LONG RAINY SEASON.....	214
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO- SHORT RAINY SEASON.....	215
5.41	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop - KILIMANJARO- SHORT RAINY SEASON.....	216
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop -KILIMANJARO, LONG RAINY SEASON.....	217
5.42	MARKETING PROBLEMS: Number of Households Reporting Marketing Problems for agricultural products by Crop -KILIMANJARO, LONG RAINY SEASON.....	218
	INPUT USE SHORT RAINY SEASON.....	219
5.75	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) -KILIMANJARO.....	220
5.76	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) - KILIMANJARO.....	221
5.77	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) -KILIMANJARO.....	222

5.75	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) -KILIMANJARO .....	223
5.77	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) -KILIMANJARO .....	225
5.78	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Insecticide use and Crop for the 2007/08 agriculture year - SHORT RAINY SEASON (VULI) -KILIMANJARO .....	226
	INPUT USE LONG RAINY SEASON .....	227

5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO.....	264
5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO.....	265
5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO.....	267

5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO.....	268
5.90	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Local seed Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO.....	269
5.87	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	270
5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	271
5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	272
5.87	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	273
5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	274
5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Organic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	275
5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Inrganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	276
5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Inrganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	277

5.87	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Inrganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	278
5.88	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Inrganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	279
5.89	ANNUAL CROP & VEGETABLE PRODUCTION: Planted Area & Number of Crop Growing Households by Inrganic Fertilizers Use and Crop for the 2007/08 agriculture year - LONG RAINY SEASON - KILIMANJARO .....	280
	ACCESS TO EQUIPMENTS .....	282
6.1.1	ACCESS TO EQUIPMENT: Number of Agriculture Households that used Agricultural Equipment/Asset by type and District for 2007/08 agriculture year - Kilimanjaro.....	283
6.1.2	ACCESS TO EQUIPMENT: Number of Agricultural Equipment/ Asset owned by type and District for 2007/08 agriculture year- Kilimanjaro .....	284
6.2.1	ACCESS TO EQUIPMENT: Number of Agricultural Households that Used Tractors/Draft animals to cultivate Land By Type and District for 2007/08 agriculture year - Kilimanjaro .....	285
6.2.2	ACCESS TO EQUIPMENT: Number of Tractors/Draft animals Owned by Type and District for 2007/08 agriculture year - Kilimanjaro.....	285
	IRRIGATION .....	286
6.5.1:	IRRIGATION: Number of Agriculture Households reporting use of Irrigation during 2007/08 agricultural Year by District.....	287
6.5.2:	IRRIGATION: Number of Agriculture Households using irrigation by Source of Irrigation Water by District during the 2007/08 agricultural Year .....	287
6.5.3	IRRIGATION: Number of Agriculture Households by method of used to obtain water and District during 2007/08 agriculture year .....	287
	EROSION CONTROL.....	288
6.6.1	EROSION CONTROL: Number of Households with Soil Erosion Problem on their Land By District .....	289
6.6.2	EROSION CONTROL: Number of Households with Erosion Control/ Water Harvesting Facilities on their Land By District.....	289

6.6.3	EROSION CONTROL: Number of Erosion Control/Water Harvesting Structures by Type and District as of 2007/08agriculture year.....	289
	AGRICULTURE CREDIT .....	290
7.1	AGRICULTURE CREDIT: Number of Agriculture Households receiving Credit by District During the 2007/08 Agriculture Year .....	291
7.2	AGRICULTURE CREDIT: Number of Credits by sex of the household Member receiving credit from source B and District During the 2007/08 Agriculture Year.....	291
7.3	AGRICULTURE CREDIT: Number of Households receiving Credits by Main Source of credit and District During the 2007/08 Agriculture Year.....	292
7.4	AGRICULTURE CREDIT: Number of Households Reporting the Main reasons for Not Using Credit by District During the 2007/08 Agriculture Year.....	292
7.5	AGRICULTURE CREDIT: Number of Households receiving Credits by Main Source of credit B and District During the 2007/08 Agriculture Year .....	293
7.6	AGRICULTURE CREDIT: Number of Households receiving Credits by Main Source of credit C and District During the 2007/08 Agriculture Year .....	293
7.7:	Provision of credit A by sex and District During the 2007/08 Agriculture Year .....	293
7.8 :	Provision of credit B by sex and District During the 2007/08 Agriculture Year.....	293
7.9 :	Provision of credit C by sex and region During the 2007/08 Agriculture Year.....	294
	CROP EXTENSION .....	295
8.1 :	CROP EXTENSION: Number of Agriculture Households that received Crop Advice During the 2007/08 Agriculture Year.....	296
8.3 :	CROP EXTENSION: Number of Agriculture Households Participated in Contract Production Agreement During the 2007/08 .....	296
8.2 :	CROP EXTENSION: Number of Agriculture Households Participated in Out Grower Agreement During the 2007/08 Agriculture Year .....	296
8.4 :	EXTENSION MESSAGES: Number of Agriculture Households By Source of Extension Messages By District During the 2007/08 Agriculture Year.....	297
8.5	CROP EXTENSION: Number of households receiving extension advice on Spacing by District during the 2007/08 agriculture year.....	297

8.6	CROP EXTENSION: Number of households receiving extension advice on Use of Agrochemicals by District during the 2007/08 agriculture year .....	298
8.7	CROP EXTENSION: Number of households receiving extension advice on Erosion Control by District during the 2007/08 agriculture year .....	298
8.8	CROP EXTENSION: Number of households receiving extension advice on Organic Fertilizer use by District during the 2007/08 agriculture year .....	299
8.9	CROP EXTENSION: Number of households receiving extension advice on use of Inorganic Fertilizer by District during the 2007/08 agriculture year .....	299
8.10	CROP EXTENSION: Number of households receiving extension advice on Use of Improved Seeds by District during the 2007/08 agriculture year ....	300
8.12	CROP EXTENSION: Number of households receiving extension advice on Irrigation Technologies by District during the 2007/08 agriculture year .....	301
8.13	CROP EXTENSION: Number of households receiving extension advice on Crop Storage by District during the 2007/08 agriculture year .....	301
8.14	CROP EXTENSION: Number of households receiving extension advice on Vermin Control by District during the 2007/08 agriculture year .....	302
	AGRICULTURE CONSRAINTS .....	303
9.11.1	AGRICULTURE CONSTRAINTS: Number of Agricultura Households Reporting the FIRST most important Constraint by District, 2007/08 Agricultural Year .....	1 304
9.11.2	AGRICULTURE CONSTRAINTS: Number of Agricultural Households Reporting the SECOND most important Constraint by District, 2007/08 Agricultural Year .....	306
9.11.3	AGRICULTURE CONSTRAINTS: Number of Agricultural Households Reporting the THIRD Most important Constraint by District, 2007/08 Agricultural Year .....	308
9.11.4	AGRICULTURE CONSTRAINTS: Number of Agricultural Households Reporting the FOURTH Most important Constraint by District, 2007/08 Agricultural Year .....	311
9.11.4	AGRICULTURE CONSTRAINTS: Number of Agricultural Households Reporting the FIFTH important Constraint by District, 2007/08 Agricultural Year .....	313

POVERTY MODULE .....	316
10.1 HOUSEHOLD FACILITIES: Number of households reporting average number of rooms and type of building Materials and District, 2007/08 Agricultural Year .....	317
10.2 HOUSEHOLD FACILITIES: Number of households reporting average number of rooms and type of Roofing Materials by District, 2007/08 Agricultural Year .....	317
10.3 HOUSEHOLD FACILITIES: Number of households by type of Wall Materials and District, 2007/08 Agricultural Year.....	317
10.4 HOUSEHOLD FACILITIES: Number of Agricultural Households reporting ownership of Assets by District, 2007/08 Agricultural Year .....	318
10.5 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Main Source of Energy for Lighting by Distric, 2007/08 Agricultural Year .....	318
10.6 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Main Source of Energy for Cooking by District, 2007/08 Agricultural Year .....	319
10.7 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year .....	319
10.8 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Distance to Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year .....	319
10.9 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Wet Season by District, 2007/08 Agricultural Year.....	320
10.10 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year .....	320
10.11 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Distance to Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year.....	320
10.12 HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Time Spent to and from Main Source of Drinking Water during Dry Season by District, 2007/08 Agricultural Year .....	321

---

10.13	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting type of TOILET the household normally use by District, 2007/08 Agricultural Year .....	321
10.14	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Number of meals the household normally has per day by District, 2007/08 Agricultural Year .....	321
10.15	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Number of days the household Consumed Meat during the Preceding Week by District, 2007/08 Agricultural Year .....	321
10.16	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Number of days the household Consumed Fish during the Preceding Week by District, 2007/08 Agricultural Year .....	322
10.17	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting the status of food satisfaction of the household during the Preceding Year by District, 2007/08 Agricultural Year .....	322
10.18	HOUSEHOLD FACILITIES: Number of Agricultural Households Reporting Main Source of Income by District, 2007/08 Agricultural Year .....	322

## APPENDIX II TABLES

**2.1.1 TYPE OF AGRICULTURE HOUSEHOLD: Number of Households by type of Household and District during 2007/08 Agriculture year**

District	Rural Households involved in Agriculture	% of Total Rural Households	Rural households NOT involved in Agriculture	% of Total Rural Households	Total Rural Households	% of Total Households	Number of Urban Households	% of Total Households	Total Number of Households
Rombo	43,779	99.8	81	0.2	43,860	83.9	8,443	16.14	52,303

## Definition and working page for page 1

### General Definitions

Who is a Smallholder /Small Scale farmer?

Should have one or more of the following: in the 2007/08 farming season had one or more cultivated and planted farms. The farm land may either be owned, rented, borrowed. The farmer may also be raising 1 and 50 head of cattle, and/or between 5 and 100 head of sheep/Goats/Pigs, and/or between 50 and 1000

**Household:** A group of people who occupy the whole or part one or more housing units and makes joint provision for food and/or other household items. Usually such a group comprises a husband, wife, and their children. Other relatives may be members of the household if they happen to live and get food provisions from the same household. People who live together and eat from the same pot may be considered as members of the same household even if they stay in separate dwellings. An individual who lives and eat alone is considered as an independent household.

**Household Head:** A person who is acknowledged by all other members of the household either by virtue of his age or standing in the household as the head. He/she should be a permanent resident of the house and he/she is the main person responsible for decision making regarding use of household resources..

**Agricultural Holding:** This is an economic unit of agricultural production under single management. This unit may have been grown various crops. For the purpose of the survey, the agricultural holdings are restricted to those which meet one of the following conditions:

- Having or operated at least 25 sq meter of arable land
- Own or keep at least one head of cattle or five goats/sheep/five pigs or fifty chicken/ducks/turkeys during the agricultural year 2007/08 (from October 2007 to September 2008).

### Question Specific Definitions:

#### Type of Agriculture holding Codes (Q2.1):

**Crops only:** A holding is referred to be a crop only holding if it has cultivated at least one piece of land. This also applies to all households owning or have kept livestock whose number does not qualify such households to be an agricultural holding (No cattle, less than 5 goats/sheep/pigs, less than 50 chickens/turkeys/rabbits).

**Livestock only:** A holding is referred to be a livestock only holding if it has exercised livestock husbandry only during the 2007/08 agricultural year.

#### NOTE

For agricultural holding only and pastoralist holding only; the number of livestock should be at least one head of cattle, not less than five goats/sheep/pigs, not less than 50 chickens /turkeys /rabbits. This also applies to households having or operated less than 25 sq meter of cultivated land (which does not qualify the household to be considered as agricultural holding) but has the number of livestock that makes the holding qualifies to be considered as livestock holding.

**Pastoralist holding:** This refers to a household which practices livestock production as its major income generating activity and a means of subsistence, but moves from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they have no permanent place of residence.

**Both crops and livestock:** A holding is referred to be a both crops and livestock if it has cultivated a piece of land equal or exceeding 25 sq meter and if such households have own or kept livestock whose number qualify such household be considered as an agricultural holding.

### Procedures for questions:

#### Q 2.1 Type of agriculture household/holding

Using the options under the question classify the type of agriculture household/holding

Note: If the household had an acre of crops and raised 40 chickens during 2007/08, it is classified as 'Crops only' as the number of chickens does not qualify the household as a livestock holding.

**Definition and working page for page 2**

**Question Specific Definitions:**

**Relation to head (Col 2):**

**Household Head:** A person who is acknowledged by all other members of the household either by virtue of their age or standing as the household head.

**Read and Write (Col 8)**

**Any other language: Must be a written language.**

For someone who can read and write in Kiswahili and any other language apart from English, the correct code is 1. For one who can read and write in English and any other language apart from Kiswahili the the correct code is 2. Code 4 should only be used for any other language which is not English or Kiswahili.

**Education Level Reached (Col 10):**

Ask the respondent the highest educational level reached. This aims at establishing whether at the time of enumeration the member of the household is studying has completed or has never studied. Make further enquiry for the level of education reached for those who have completed studies. Establish if the member had attained any training after graduation for the purposes for completing column number 9. For those who still continue attending studies during the period of this survey, establish their learning stage. For instance for a household member who studied up to Standard Three but did not complete his/her education at this level, then his/her highest education level reached is Standard Two. For those indicated under code 3 (not studied) in column 8 should be marked code 99 (Not applicable) in column 9.

**Section 3.0 Note**

Make sure that you define the hh proper to ensure that all the members of the hh are included. Ensure that you stress that the hh is not just the hh heads direct family and that it includes other people living and eating together with the family.

If you notice that the hh is large or you see many people around the hh and you have been given a smaller number of the hh members, make further enquiries until you are sure that you have captured all the hh members.

**Section 3.0 Household information.**

- ii) For each household member complete columns 1,2,3 and 3  
After completing columns 1, 2, 3 and 3 for each household member, go back to the first household member and complete the remaining columns for that member.
- iii) Repeat step 2 for the rest of the household members.

 Others (specify) .....98

**Off-farm Income (Col 13)**

These are income made from activities NOT on the HH's farming activities. This can be from formal employment (e.g. in gpvrenment etc.), temporary jobs, casual labourers and income generation activity and includes working for cash on other people's farms.  
 Indicate whether each member was involved in an off farm income generating activity during 2007/08

### Definitions and working page for page 3

#### Definitions for Key Specific Questions

##### Section 4.1 – Land Access/Ownership

These are areas that were used by the households for the 2007/08 farming season

**Lease/Certificate of Ownership:** Area under lease/certificate of ownership refers to the areas which were issued by the government. The household possesses government issued leasehold title or certificate of ownership. The land will normally be officially surveyed and boundaries marked. This includes leased land bought from others where the lease/certificate of ownership has been transferred.

**Customary Law:** This refers to the land which the household does not have an official government but its right of use is granted by the traditional leaders.

**Bought:** This refers to the areas of customary land that has been bought from others. This land does not have an official title and therefore is not leasehold.

**Rented from others:** Land rented from others for cash or for a fixed amount in crop produce (e.g. fixed number of bags at harvest).

**Borrowed:** use granted by land owner free of charge. Land owner can either be a lease holder or has right of access through customary law.

**Share cropping:** where the household is permitted to use land which is then paid for from a percentage of the harvested crop

#### Section 4.2 Land Use

Temporary crops: are sown and harvested during the same agricultural year

Permanent crops: are crops once sown or planted last for some years and need not to be replanted after each annual harvest.

Permanent crops /mixed crops: This is a mixture of permanent and seasonal crops. The two crops can either be randomly planted together or in a particular pattern e; for example intercropping (1 row of maize and 1 row of beans). A field that has been divided into plots for different crops is not mixed).

This is further subdivided into:

Mixture of Permanent crops – two or more permanent crops grown together

Mixture of Permanent and Temporary crops – permanent crop and annual crop together

Mixture of Temporary crops– two or more temporary, annual crops grown together

**Pasture land:** this is an area of owned/allocated land which is set aside for livestock grazing. It can be improved pasture where the farmer has planted grass, applied fertilized or where other means have been applied to improve the pasture. Or it can be natural pasture.

**Natural Bush:** Land which has naturally grown shrubs and trees and is considered productive but is not utilized for farming or livestock production.

### Overview to section 4

#### Overview to section 4

##### Section 4.0: Preliminary note

##### Land Access/Ownership

Land access/ownership refers to the area utilized by the members of the household. This does not include communal land where the resources are shared between household members. It does not include official communal land that the household has sole access to for example a plot for crop farming in the communal area.

### Procedures for questions

#### Section 4.0 – Land Ownership

1. Ask the respondent if he knows the total areas of land the household has sole access to. If he knows make a note in the calculation space
2. Ask the respondent the area of the different land ownership categories the household has sole access to (Q4.1, 1 to 4.1.7) and record in the appropriate spaces.
3. Add up the area of the different categories of land and compare it with the total area obtained in step 1 (if the respondent provided the information)
4. If the total area is different find out which one is correct and make

#### Section 4.2: Land Use

1. Ask the respondent the area of the different land use categories the household has sole access to (Q4.2.1 to 4.2.12) and record in the appropriate spaces.
2. Add up the area of the different categories of land and compare it with the total area obtained in section 4.0. The total area should be the same.
3. If the total area is different find out which one is correct and make amendments where appropriate.

4.0 LAND ACCESS/OWNERSHIP/TENURE

 37 Njegere  
 41 Sun flower  
 42 Simsim  
 43 Ground uts  
 47 Soya beans  
 48 Caster Seed

**Instructions for calculating the area of mixed crops in a mixture**  
**A.** If the mixed crop is mixed annual ly only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions.  
**B.** If the mixed crop is mixed permanent and annual try to work tyhe percent age taken by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.  
**C:** Number of trees method to calculate annual crop areas in a permanent-annual crop mix:  
 (i) List each of the permanent crop in column b and enter the ground area per acre for each permanent crop (from instructions for page 8) in column d.  
 (ii) Enter the number of permanent trees in the mix in column e as will be provided to you by the respondent  
 (iii) Calculate the area occpied by each crop by multiplying column d and collumn e and sum up these to obatin the total area of permanent crops in the mix.  
 iv) To obatin the area for temporary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.  
 (v) Proceed to step 1 to calculate the area under each temporary crop.  
**1.** Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.  
**2. Using the percentage for each crop, calculate the are for each crop from the remaining area under temporary crop.**  
**3.** After completing the excrisc for all the fields, sum the area of each crop in tyhe mix plus any monocrops and uenter the totals in section 5.1.1 Collumn 3.  
**4. Once the quantity harvested is obtained , calcukate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box.** If there is significantly difference, check the area and the amount harvested..

### Definitions and working page for page 5

#### Storage (Col. 30, Q 5.1.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

#### Marketing Challenges Q 5.1.1 Col. 33:

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulatinq transportation and selling of crops.

#### Inputs (Q 5.1.1)

- Farm Yard Manure:** An organics fertiliser made on farm from animal dung. .
- Compost:** An organic fertiliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

### Questions specific definitions

#### Q 5.1.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

**Crops storage is keeping/reserving crops in a container or a special place for future use.**

#### Q 5.1.1 Col 31

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

62	Jute
19	Seaweed

**Instructions for calculating the area of mixed crops in a mixture**

**A.** If the mixed crop is mixed annual ly only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions

**B.** If the mixed crop is mixed permanent and annual try to work tyhe percent age taken by the different crops and calculat the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.

**C:** Number of trees method to calculate annual crop areas in a permanent-annual crop mix:.

(i) List each of tyhe permanent crop in collumn b and enter the ground area per acre for each permanent crop ( from instrctions for page 8) in colum d.

(ii) Enter the number of permanent trees in the mix in collumn e as will be provided to you by the respondent

(iii) Calculate the area occupied by each crop by multiplying collumn d and collumn e and sum up these to obatin the total area of permanent crops in the mix.

(iv) To obtain the area for temporary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.

(v) Proceed to step 1 to calculate the area under each temporary crop.

**1.** Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.

**2. Using the percentage for each crop, calculate the are for each crop from the remaining area under tenmporary crop.**

**3.** After completing the excrise for all the fields, sum the area of each crop in tyhe mix plus any monocrops and uenter the totals in section 5.1.1 Collumn 3.

**4. Once the quantity harvested is obtained , caklculate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box. If there is significantly difference, check the area and the amount harvested..**

### Definitions and working page for page 7

#### Storage (Col. 30, Q 5.2.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

#### Marketing Challenges Q 5.2.1 Col. 33:

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulatinq transportation and selling of crops.

#### Inputs (Q 5.2.1)

- Farm Yard Manure:** An organics fertiliser made on farm from animal dung. .
- Compost:** An organic fertiliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

#### Working area/calculation space

### Questions specific definitions

#### Q 5.2.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

**Crops storage is keeping/reserving crops in a container or a special place for future use.**

#### Q 5.2.1 Col 33

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

Definitions and working page for page 8

**Permanent Crops:**

These are crops once planted last longer in the farm and need not be replanted after each annual harvest. Most of the permanent plants include tress such as coconut tress, apple trees, grape trees, banana trees, pineapple trees etc.

**Number of Trees:**

These include manure trees and premature trees.

**Number of mature plants:**

A total of fruit bearing tress (e.g. mango trees, orange trees, avocado trees e.t.c).

**Instructions for permanent monocrops and crop mix:**

- A. For a field with permanent monocrop enter farm size in collumn. 3.
- B. For a field with a permanent crop mix or a temporary crop mix, enter the number of trees only in collumn 4.
- C. For a field with a permanent crop mix /temporary annual crops , either:
  - Enter the area in collumn 4, if the total arae for permanent crops was obtained through calcuation of percentages of each crop
  - OR
  - Enter the number of tree in collumn 5, if the number of plants/ seedlings of permanent crops was excluded

**21 Cassava:** Cassava is a temporary crop, in order to simplify data collection on areas of production, data on cassava will be collected from areas under permanent crops.

**Permanent crops:( crop oils)**

Code	Crop	Area per crop

#### Storage (Col. 33, Q 5.3.1):

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

#### Marketing Challenges Q 5.3.1 Col. 35:

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulatinq transportation and selling of crops.

#### Inputs (Q 5.3.1)

- Farm Yard Manure:** An organics fertliser made on farm from animal dung. .
- Compost:** An organic fertliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

### Questions specific definitions

#### Q 5.3.1. Instructions on crops storage:

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

#### Q 5.3.1 Col 35

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

### Working area/calculation space

### Definitions and working page for page 10

#### Investment in agriculture

##### Investment activities:

Investment activities refer to medium to long term farm development structures and projects. This can be irrigation structures, erosion control and water harvesting structures or other permanent or semi-permanent investment made on the land that the household owns.

#### Irrigated farming: Section 6.5:

**Source of irrigation water** (Col 1): The main source of the water used for irrigation.

**Method of obtaining water** (Col 2): The mechanism by which the water is extracted from the source

**Irrigatable area** (Col 3): The area the irrigation system is designed to cover in acreage

Area of irrigated land during the 2007/08 (Col 5): Area of land under irrigation during the 2007/08 agricultural year. This is the actual area and NOT the cumulative areas recultivated in 2 or more cropping seasons.

#### Farm Implements (Col. 1):

**Machette** : Include all implements use in tree cutting namely cicle, etc.

**Sprinkler**: The pump carried on the back or a hand used water pump

**Hand used small tractor**: A small tractor used in cultivation while the user walks on foot (see photo).

#### Section 6.2 Use of draft animals

Animals used in agricultural activities by the household during 2007/08 agricultural season.

**Castrated Bulls**: Castrated oxen meant for use in agricultural production.

**Uncastrated Bulls**: mature bulls used for garicultrual activities but are not castrated.

**Cow**: Farmers also use mature female cattle in agricultural activities due to shortage of bulls

**Donkey**: Mature Male or female donekys are also used for agricultural production.

#### Q 6.5 Irrigation.

1. If a household uses irrigated farming give explanations aon source and method of obatining water. .

2. See Col 10, Q. 5.1.1 and 5.2.1 and Col 12, Q 5.3.1 to see if irrigation was applied to any crop.

#### Farm implements, Q 6.1:

1. Collumn 2 Indicate whether or not inputs were used

2. Complete collumn 3 by entering the number of inputs used.

#### Farm inputs: Sections 6.3 and 6.4

1. Collumn 2 Indicate whether or not inputs were used.

2. Compelte collumn 3 by indicating where the inouts were obatined and collumn 4 by indicating the distance from where the inputs were obatined

**Compost**: An organic fertiliser made on farm from decomposed plant materials.

**Insecticides**: This is the chemical use in protecting plants or killing pests.

**Fungicides**: Protects plants from fungi attack.

**Herbicide**: Chemicals used to control or kills weeds.

**Improved seeds**: Scientifically attested to be suitable for agricultural use.

<b>IRRIGATED FARMING</b>				
Did the household use irrigated farming during 2007/08 agriculture year? Yes=1, No = 2 <input type="checkbox"/>				
If the answer is yes proceed to Section 6.6				
No.	Main source of water for irrigation	Main source of obtaining water	Area that can be irrigated (Acre)	Area irrigated during 2007/08 agriculture year (Acre)
	(1)	(2)	(3)	(4)
6.5.2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Definitions and working page for page 11**

**Q 6.6**

**The type of erosion control/Water harvesting (Col 1)**

**Terraces:** Structures constructed on mountain slopes to provide flat terrain for crop planting.

**Erosion control bunds: these are bunks of earth/stones built perpendicular to the slope** to slow down the speed of water and thus preventing soil erosion. Its differs from terraces in that the soils on these banks are not at ground level .

**Gabions:** A box like structure made of wire and filled with large stones to prevent gully erosion.

**Sand bags:** Are used in controlling and preventing gully erosion  
**Tree belt/wind breaks:** Trees planted against the wind direction for breaking wind speed..

**Section 7.0 Acces to credit for crop or livestock production**

Credit refers to something provided in cash or in kind (such as farm inputs, machines, livestock and other things) for crop or livestock production. The value of the credit must be repaid back to the lender. An Interest may or may not be attached to the value of the credit  
 The credit may be repaid either in cash or through farm produce to be harvested .

In this question the enumerator is at liberty to inquire up to three sources of credit where the farmer accessed credit from more than one source.

**Section 8.0 Agricultural Extension Services**

**Agricultural Extension Services:** Refers to educational services provided to farmers by exetsion officers for the purposes of increasing crop and livestock production.

**Share-cropping:** Refers to farming where smallholder / Smallscale farmer enters into an agreement with large scale farmer where the former sells produce to the latter in exchange of provisions of farm inputs and the like. .

**Contract farming Farming:** Farming agreement entered between smallscale and large scale farmerswith regards to markets of farm produce and provision of farm inputs

**Q 6.6 Number of water harvestin structures and year of construction**

1. The number water haversting structures refers to the number of wokring / maintained structures and does not include derelict or iireparable structures.

2. Year of construction refers to the year in which the structures were built, and not the year the structures were last repaired.The year should be written in figures e.g. 1998, 2006.

**Section 7.0 Source of agriculture credit**

If tghе farmer obtained credit from more than one source the use the code from the list provided. Start with the main source of credit in Section "7.1.1".a

**Section 8.0 Agricultural extension services**

1. Ask if the household did receive agricultural extension services during 2007/08 agricultural season from the respondents listed in collumn 1, then enter column 2.

2. Complete all columns for every extension officer.

6.6 SOIL EROSION Identification <input type="checkbox"/>						
6.6.1 Did the household experience soil erosion during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>

### Definitions and working page for page 12

**Q 9.1 and 9.3 :** What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

**Keeping or raising livestock** is to to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

#### Sections 9.1.1 to 9.1.7 Cattle

**Note:**

**Q 9.1 is for the actual number of cattle owned or kept by the household (as of 1st October 2008). This number does not include herds of cattle kept on behalf by relatives or neighbours; that is, the cattle outside the residential area of the household under survey.**

1. If the the household keep mature fecund female cattle, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

#### Type of cattle (section 9.1.1 to 9.1.7)

**Bull:** Mature uncastrated male cattle used for breeding

**Cow:** Mature female cattle that has given birth at least once

**Ox:** Castrated male cattle used for farm work

**Steer:** Castrated male cattle used for meat

**Heifer:** Female cattle of 1 year up to the first calving

#### Section 9.3 Goat

**Note:**

**Question 9.3 is for the actual number of owned or raised by the household (as of 1st October 2008) This number does not include goats kept on behalf by relatives or neighbours, that is the goat outside the residential area of the household under survey.**

1. If the household has she goats, you would normally expect them to have kids

#### Type of Goat (Qs 9.3.1 to 9.3.5)

**Billy Goat (he-goat):** Mature Uncastrated male goat used for breeding

**Castrated goat:** Male goat that has been castrated

**She Goat:** Mature female goat over 9 months of age

<b>9.0 LIVESTOCK (LIVESTOCK AND FISH)</b>																		
<b>9.1 CATTLE</b> Identification <input type="text"/>

### Definitions and working page for page 13

**Q 9.1 and 9.3 :** What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

**Keeping or raising livestock** is to to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

#### Sections 9.4 Sheep

**Note:**

**Q 9.4 is for the actual number of sheep owned or kept by the household (as of 1st October 2008). This number does not include sheep kept on behalf by relatives or neighbours; that is, the sheep outside the residential area of the household under survey.**

1. If the the household keep ewes, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

#### Type of Sheep (Section 9.4.1 to 9.4.5)

**Ram:** Mature Uncastrated male sheept used for breeding

**Castrated sheep:** Male sheep that has been castrated

**Ewe:** Mature female sheep over 9 months of age

**Lamb:** Young sheep under 9 months of age.

#### Section 9.5 Pigs

**Note:**

**Question 9.3 is for the actual number of pigs owned or raised by the household (as of 1st October 2008). This number does not include pigs kept on behalf by relatives or neighbours, that is the cattle outside the residential area of the household under survey. .**

1. If the household has she goats, you would normally expect them to have kids in column

#### Type of Pigs (Qs 9.5.1 to 9.5.5)

**Boar:** Mature Uncastrated male pig used for breeing

**Sow:** Mature female pig that has given birth to at least one ltter of pigs.

**Gilt;** Female pig of over 3 months up to the first farrowing

**Piglet:** Young pig less than 3 months of age

<b>Identification</b> <input type="text"/>

NOTE : If answers to Qs 9.1 to 9.6 is No (THAIS THE HOUSEHOUSE DOES NOT RAISE LIVESTOCK), Proceed to q.9.9

**Definitions and working page for page 15**

**General definitions**

**Fish farming:** Refers to the rearing/production of fish. It is different from fishing in that in fish farming the fish have to be reared. While in fishing, fishing nets or traps are used to catch fish from rivers, lakes and the sea; thus fishing should not be included in this section

I

**Question Specific Definitions (Q 9.9 )**

Production unit number (Col 1): A production unit is a pond river/lake which is treated as a separate entity for the production of fish eg it may be by virtue of manageable size, maturity of fish, tye of fish etc. eg. a farmer may have 3 fish ponds (each one is a separate production unit).

Frequency of stocking (Col . 5): What is the number of time the farmer puts new fingerlings into the pond each year.

Fingerlings: These are young immature fish used for stocking ponds.

**Sols: (Col 10 & 11)**

If no fish were sold enter "0" in column 10 and 11`

**Fish sold (Col.12)**

Kama hakuna samaki waliouzwa jaza "0" katika safuwima 12

**Working space for page 15**

**Definitions and working page for page 16****10.0 Household poverty indicators****Number of rooms used for sleeping in the household (Q 10.1.4)**

Include sitting room, dining room, kitchen, etc if used for sleeping.

It also includes rooms outside the main dwelling

A room is defined as a space which is separate from the rest of the building by a permanent wall or division. A building / house that is not divided into rooms is considered to have one room.

**Household assets (Q 10.2):**

These assets must be functional. Do not include if broken.

**Access to drinking water (Q 10.4):**

If there is more than one source use the one, which the hh uses most frequently.

**Main source of hh cash income:(Q 10.7:**

Activity that provides the hh with the most cash during 2007/08 agricultural season.

**Definitions and working page for page 3**

**Question Specific Definitions:**

Obtain answers to the following questions from the meeting between the enumerator and influential farmers in the village. Influential people can be Village Chairman, Village Government Executive Officer, Councillor, Ward Chairman, Extension Officer in the village or any other person in the village and who is well informed about village matters. It is important to not that these questions must be asked in groups (of more than one people) to obtain answers discussed and approved by many people.

**Definitions of some specific terms**

**Access to community resources. Section 1.0**

**Community Resources:** Resources in which the hh members have no individual claim to and which are shared together by all the village

**Community Land:** The area official demarcated by the village as shared/public land.

**Squatting farmers Land:** Communal land where individual hhs make sole claim to (for crop farming or fenced livestock) without official rights to ownership.

**Available remaining Land:** Official area of communal land minus areas of squatting farmers.

**Government Land Reserve:** Area set aside by the government as national reserve

**Community tree planting scheme(Section 14.3)**

**Community Forest:** A forest planted on the communal land which is planted, replanted or spt planted by the members of the village.

**Plant Planting:** An area designated by the village for planting a block of trees.

**Spot Planted:** Replanting an area where selective logging has been carried out. A tree is planted to replace the one that has been cut.

**Indigeous Trees:** Trees that are native to Tanzania

**Exotic Trees:** Trees that are not native to Tanzania

**Non Government Organisation:** Is managed by people from outside the village and it normally covers more than one village/District/R region. Its function is to provide deveoopment assistance to the farmer and is free from direct government links.

**Village level organization:** is managed by members of the village. Its purpose is normally to access/provide development assistance to the village

ACCESS TO COMMUNAL RESOURCES

1 ACCESS TO COMMUNITY RESOURCES										
1.1 Does the village set aside an area for communal resources e.g. forest, grazing, etc. (Yes =1 No =2) <input type="checkbox"/>										
<i>(If the answer is no proceed to 1.2)</i>										
Area of Community, Village, Wrad resources					Area in acre					
1.1.1	Total area of communal land				<input type="text"/>				Official figures from the leader	
1.1.2	Area of squatting famers in communal land				<input type="text"/>				Key informant (Leader/Extension officer etc.)	
1.1.3	Remaining available communal land				<input type="text"/>				Key informant (Leader/Extension officer etc.)	
1.1.4	Government reserve land				<input type="text"/>				Key informant (Leader/Extension officer etc.)	
1.2 UPATIKANAJI NA MATUMIZI YA MALIASILI ZA JUMUIYA/KIJI/SHEHIA										
Community Resources		Distance from the resource in Km -season			Main Use		<p>Instructions on distance from the resource (Cols 2 and 3): Distance is estimated from the centre of the village. If under 1 km 1, enter 0 If above 1 km 1 enter whole number , eg. 1.5km= 2km, 1.25km= 1km</p> <p>Main uses (Col. 4) Home or farm /livestock consumption...1 Sold to traders in the village.....2 Sold to the village market.....3 Sold to local wholesalers.....4 Sold to Big wholesalers.....5 Not available.....6</p>			
		Dry	Rainy							
		(1)	(2)		(3)					
1.2.1	Water for human consumption	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.2	Water for livestock	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.3	Communal grazing land	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.4	Communal firewood	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.5	Wood for charcoal burning	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.6	Wood for building poles	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.7	Forest for bee keeping (honey)	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.8	Hunting	<input type="text"/>	<input type="text"/>		<input type="text"/>					
1.2.9	Fishing	<input type="text"/>	<input type="text"/>		<input type="text"/>					
2.0 COMMUNITY PLANTED TREES										
2.1 Did your village have community planted trees during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>										
<i>If the answer is no proceed to Section 3.0</i>										
Details of the community tree planting scheme										
No.	Distance from the community forest	Forest Area (acre)	Type of Planting	Type of Trees	Source of seeds/ Seedlings	Number of Years since the start of planting	Main uses 2007/08 agriculture year	Main uses of communal forest products		
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)		
2.2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>		
<p>Type of planting (Col. 3) Polation planting.....1 Spot planting.....2</p> <p>Type of trees (Col. 4) Indigenous trees.....1 Exotic tree.....2 Both types.....3</p>		<p>Source of seedlings (Col. 5) Seeds collection and planting.....1 Village Nursery.....2 Department of Forestry.....3 Private Individuals.....4</p>			<p>Main Uses (Col. 7) Poles.....1 Wood.....2 Charcoal.....3 Firewood.....4 Other (Specify) R</p>		<p>Main use of revenue (Col.8) Village development fund.1 Household use.....2 Household income.....3</p>			
3.0 Non governmental Organisation (NGOs) Contact					4.0 Community Based Organisation					
3.1 Did any NGO visit the village during 2007/08 agriculture year? (Yes=1, No=2) (If no proceed to Section 4)					4.1 Did the village have any CBO during the 2007/08 agriculture year?(Yes=1, No=2)					
Na.	Type of NGO	Visited Y=1,N=2	Number of visits	Distance to the Office (km)	Na.	Type of CBO Nd=1,Hap=2				
3.2	Extension/ Rsearch	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.2	Extension/ Rsearch <input type="checkbox"/>				
3.3	Service /Input provision	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.3	Service /Input provision <input type="checkbox"/>				
3.4	Community Development	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.4	Community Development <input type="checkbox"/>				
3.5	Other	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.5	Other <input type="checkbox"/>				
5.1 Did the village have Field farm schools during 2007/08.agriculture year? (Yes=1, No=2) <input type="checkbox"/>					5.2 Did the village participate in any research on crops/ improved livestock during in the village during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>					
5.3 Did the village have local ironsmiths during 2007/08 agriculture year? (Yes=1, No=2 ) (If the answer is 2 proceed to q. 5.5					5.5 Did the village have any training centres on draft animals during 2007/08 agriculture year? (Yes=1, No=2 ) If number 2 is the answer conclude the enumeration.					
5.4 Number of local ironsmiths <input type="text"/>					5.6 Number of training centres for draft animals <input type="text"/>
