PRODUCER PRICE INDICES FOR THE QUARTER ENDING JUNE, 2022

Introduction

The National Bureau of Statistics hereby releases the Producer Price Index (PPI) for the second quarter April-June of 2022. The Producer Price Index measures the average change over time in the prices received by selected domestic producers for the production of their goods. A basket includes a list of selected commodities of goods that are being priced on quarterly basis. The producer prices collected as at 15th of the mid-month of every quarter that is; (Q1: January-March), (Q2: April-June), (Q3: July-September) and (Q4: October-December).

Weights and a Reference Period

The index weights are based on gross output derived from the 2015 Annual Survey of Industrial Production (ASIP 2015). The Producer Price Index on this release reports the indices with reference to Fourth Quarter (October-December) of the year 2018(2018Q4=100). It shows the producer price changes since December 2018 up to second quarter of 2022.

Classification

Industrial Classification follows the International Standard Industrial Classification of All Economic Activities (ISIC) Rev.4.

Methodology

In the process of deriving the structure and weights, a top-down approach was adopted in order to maximize the indirect representation of industries and items. The basket was selected and base weights were calculated from Gross Output (GO) based on The Annual Survey of Industrial Production of 2015. During the process of weights calculation, establishments with a contribution of at least 80% of Gross Output were selected in each ISIC Rev.4 Group.

A sample of establishments for inclusion in the price survey was then selected using cut-off sampling procedures.

The first level of aggregation is the class 4-digit ISIC; these indices are the un-weighted Elementary Aggregates (EA) and are being compiled using the Jevons geometric mean aggregation formula which refers to the Geometric Mean of the price relatives. The Elementary Aggregates indices are then being progressively combined with higher levels within the index structure (i.e. Group 3-digit, 2-digit division and 1-digit Section levels of the ISIC, and then the all-groups levels) using the standard base-weighted Laspeyres formula.

	Overall Index	100	110.0	112.8	114.2	1.2	3.9

*Utilities includes; Electric power generation, transmission and distribution and Water collection, treatment and supply

Overall index recorded an increase of 1.2 percent from 112.8 of first quarter 2022 to 114.2 of second quarter 2022. An increase was attributed by Manufacture of computer, electronic and optical products by 6.5 percent followed by Manufacture of food products by 4.1 percent and Manufacture of other non-metallic mineral products by 2.5 percent. On the other hand, Manufacture of coke and refined petroleum products decreased by 0.6 percent followed by Manufacture of wearing apparel; and Manufacture of rubber and plastics products by 0.2 percent each.

Looking at percentage change on the same quarter (second quarter 2021 to second quarter 2022), the overall index recorded an increase of 3.9 percent from 110.0 second quarter 2021 to 114.2 second quarter 2022. An increase was attributed by Manufacture of computer, electronic and optical products by 30.4 percent followed by Manufacture of leather and related products by 14.3 percent and Manufacture of basic metals by 13.3 percent. On the other hand, Manufacture of motor vehicles, trailers and semi-trailers decreased by 11.7 percent followed by Manufacture of machinery and equipment n.e.c. by 2.0 percent and Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials with a decrease of 0.6 percent.
