Date: 16<sup>th</sup> May, 2022

### PRODUCER PRICE INDICES FOR THE QUARTER ENDING MARCH, 2022

#### Introduction

The National Bureau of Statistics hereby releases the Producer Price Index (PPI) for the first quarter January-March of 2022. The Producer Price Index measures the average change over time in the prices received by selected domestic producers for the production of their goods. A basket includes a list of selected commodities of goods that are being priced on quarterly basis. The producer prices collected as at 15<sup>th</sup> of the mid-month of every quarter that is; (Q1: January-March), (Q2: April-June), (Q3: July-September) and (Q4: October-December).

#### Weights and a Reference Period

The index weights are based on gross output derived from the 2015 Annual Survey of Industrial Production (ASIP 2015). The Producer Price Index on this release reports the indices with reference to Fourth Quarter (October-December) of the year 2018(2018Q4=100). It shows the producer price changes since December 2018 up to first quarter of 2022.

#### Classification

Industrial Classification follows the International Standard Industrial Classification of All Economic Activities (ISIC) Rev.4.

#### Methodology

In the process of deriving the structure and weights, a top-down approach was adopted in order to maximize the indirect representation of industries and items. The basket was selected and base weights were calculated from Gross Output (GO) based on The Annual Survey of Industrial Production of 2015. During the process of weights calculation, establishments with a contribution of at least 80% of Gross Output were selected in each ISIC Rev.4 Group.

A sample of establishments for inclusion in the price survey was then selected using cut-off sampling procedures.

The first level of aggregation is the class 4-digit ISIC; these indices are the un-weighted Elementary Aggregates (EA) and are being compiled using the Jevons geometric mean aggregation formula which refers to the Geometric Mean of the price relatives. The Elementary Aggregates indices are then being progressively combined with higher levels within the index structure (i.e. Group 3-digit, 2-digit division and 1-digit Section levels of the ISIC, and then the all-groups levels) using the standard base-weighted Laspeyres formula.

Overall index recorded an increase of 1.0 percent from 111.7 of fourth quarter 2021 to 112.8 of first quarter 2022. An increase was attributed by Manufacture of leather and related products by 11.5 percent followed by Manufacture of beverages by 9.8 percent and other manufacturing by 4.5 percent. On the other hand, Manufacture of motor vehicles, trailers and semi-trailers decreased by 13.2 percent followed by Manufacture of paper and paper products 9.6 percent and Manufacture of computer, electronic and optical products by 8.8 percent.

Looking at percentage change on the same quarter (first quarter 2021 to first quarter 2022), the overall index recorded an increase of 3.4 percent from 109.0 first quarter 2021 to 112.8 first quarter 2022. An increase was Manufacture of computer, electronic and optical products by 16.0 percent followed by Manufacture of basic metals by 13.1 percent: and Manufacture of chemicals and chemical products by 11.0 percent. On the other hand, Manufacture of motor vehicles, trailers and semi-trailers decreased by 5.4 percent followed by Manufacture of pharmaceuticals, medicinal chemical and botanical products and Manufacture of machinery and equipment n.e.c. decrease by 2.1 percent each.
